dear nafisa,

It is quite possible that you have attended, but the attendence
register does not show, in future please ensure that you make your
entry whenever you do attend, the onus is on you..

From: vu2nlf
Topic: 1510 Message: 1510

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

We are pleased to inform that 3 more tickets have arrived..from the batch of 2002.

MINAL MADIGERI - VU2 MUF
SUPRIYA TUPE - VU2 MIV
SHYAM KAPADIA - VU2 KPE

Now very few tickets are pending from the batch 2002, mainly due to missing nationality certificates, which is being looked into, very soon all the tickets will be cleared by the W.P.C. whom we are very greatful for processing MARS tickets in a very short time.

1515. vhf handy IC 2N for sale

Yahoo group: m_a_r_s
Date: 2004-01-11 06:53:25 UTC
From: ajay solanki
Topic: 1515 Message: 1515

Hi
I would like my VHF handy ICOM IC2N.
It is in good working condition.
It has given me good company in all the events.
It has manual dial for adjusting frequency.
Manual repeater shift.
I had purchased it for 4500
I would like to sell it at 3900
I am in Bombay on 15th and 16th of Jan.

If anyone has the email id of GT please mail it to me
as some of the bangalore hams need it.

Regards,
Ajay..

Hi Mehul,
Not to worrey abt ZRS's mail.Probably the hams who are
bringing their own handies have been listed.

From: VU2NXM
Topic: 1518 Message: 1523

Hello all there !!

Namaste.

The emergency exercise was conducted very outstandingly,

It seems You all were well prepared, well trained,

Lot of HAMS appreciating the disciplined communication You have carried out. Well Done.

(I too got some of the BONUS points , after all I am also a MARS life member).

Keep it up,

GOD BLESS YOU,

Basappa Arabole

1525. Simulated Disaster Communication Exercise, Satara, Jan'2004

Yahoo group: m_a_r_s
Date: 2004-01-22 11:33:44 UTC
From: VU2UGO
Topic: 1525 Message: 1525
Attachments: 4 described; binary payloads are missing from this source WARC

Hi OMs/YLs,

MARS successfully conducted the 3 days Simulated Disaster Communication Exercise on 16 to 18th January, 2004 at SATARA District, Maharashtra. Total Four teams operated from field and one from Mantralaya, Mumbai.

1. VU2NLF (Leader), VU2IZO, Aslam, Ankur - Location : Koyna Dam
2. VU2HIT (Leader), VU2IES, Ulhas - Location : Distric Collector Office at Satara
3. VU2OZO (Leader), VU2PIC, VU3AUA - Location : Village Mendh near Karad
4. VU2UGO (Leader), VU2SFN, Anish Pancholi - Location - Village Chore-Marli
5. VU2ZRS (Leader), VU2UGJ, VU2CBU, Abhay - Location : Mantralaya

I would like to Congratulate:

- all the teams for successfully putting up their station in-time at their locations and operating it for 3 days (FRI/SAT/SUN) using the batteries (without power supply) in SSB and digital modes (like psk31 & sstv) on 40/80m band.

- the new callsign holders (Anish-VU2OZO, Micky-VU2IZO, Shailesh-VU2SFN, Santosh-VU2IES) and SWLs (Abhay, Aslam, Ankur, Anish, Ulhas) who joined the MARS ARES Team in this event.

Thanks to :

- my team mates Shailesh-VU2SFN & Anish Pancholi-SWL (specially for their efforts on Day-1 for arranging spare battery at my location) (and also surviving for 3 days with me on biscuits, cakes, bread & jam, puri, farsan) :-)

- Mukesh-VU2UGJ for his Laptop (which was used for digital communication at my location)

- Resident District Collector, Satara (for stay & food arrangements at Circuit House, at the end of Day-3).

Special thanks goes to Nilesh-VU2NLF (Event Leader) for designing this exercise (which includes coordination with the participants, their travel arrangements, preparation of schedule & time envelopes, helping team leaders to prepare their gear and many more), getting WPC approval for temporary shift of station, liasioning with Govt. of Maharashtra (Relief & Rehabilitation Cell) and his help provided to Koyna Dam officials for their wireless station setup.

Thanks also goes to MARS members (Vijay-VU2VVP, Rajan-VU2RIG, Basappa-VU2NXM, Jagdish-VU2KIB) from Mumbai who monitored and made contact with ARES teams on HF.

My experience of this Field Day:
I was carrying my HF/VHF gear (for the first time in a backpack approx 24kg) and 34AH battery (separate approx.15kg) from Mumbai. I charged that battery using a solar panel for 4.5hrs (in between the two scheds) on Day-2. The panel was put up on the tower near grampanchayat for telephone connection which was lying unused. This battery supported my

TS-50 & Laptop very well (uptill 11.22V).

Things I learnt from this Exercise:
1. Optimum use of RF power (it's very tricky when you have only 10/50/100W setting in the rig like Ts-50)
2. It was my first hand experience to operate QRP.
3. Always put up 2M setup with external antenna for local communication, even if you are not in direct 2M contact with other teams.

Things I'm planning to implement in future:
1. Alternate arrangement for charging battery (may be small portable solar panel)
2. Making the backpack lightweight and well organised (e.g. may need to replace the coax from RG-58 to Teflon)
3. Update the info related to ARES and disaster communication with the help of Internet (e.g. egroups like "hfpack")
4. Portable Voice/Packet Emergency Communication solution whenever my budget & time permits ;-)
Here are few links of the projects found on internet -

> District, Maharashtra. Total Four teams operated from field and
> one from Mantralaya, Mumbai.
>
> 1. VU2NLF (Leader), VU2IZO, Aslam, Ankur - Location :
> Koyna Dam
> 2. VU2HIT (Leader), VU2IES, Ulhas - Location
> : Distric Collector Office at Satara
> 3. VU2OZO (Leader), VU2PIC, VU3AUA - Location :
> Village Mendh near Karad
> 4. VU2UGO (Leader), VU2SFN, Anish Pancholi - Location -
> Village Chore-Marli
> 5. VU2ZRS (Leader), VU2UGJ, VU2CBU, Abhay - Location : Mantralaya
>
>
> I would like to Congratulate:
>
> - all the teams for successfully putting up their station in-time
> at their locations and operating it for 3 days (FRI/SAT/SUN) using
> the batteries (without power supply) in SSB and digital modes
> (like psk31 & sstv) on 40/80m band.
>
> - the new callsign holders (Anish-VU2OZO, Micky-VU2IZO, Shailesh-
> VU2SFN, Santosh-VU2IES) and SWLs (Abhay, Aslam, Ankur, Anish,
> Ulhas) who joined the MARS ARES Team in this event.
>
>
> Thanks to :
>
> - my team mates Shailesh-VU2SFN & Anish Pancholi-SWL (specially
> for their efforts on Day-1 for arranging spare battery at my
> location) (and also surviving for 3 days with me on biscuits,

> cakes, bread & jam, puri, farsan) :-)
>
> - Mukesh-VU2UGJ for his Laptop (which was used for digital
> communication at my location)
>
> - Resident District Collector, Satara (for stay & food
> arrangements at Circuit House, at the end of Day-3).
>
> Special thanks goes to Nilesh-VU2NLF (Event Leader) for designing
> this exercise (which includes coordination with the participants,
> their travel arrangements, preparation of schedule & time
> envelopes, helping team leaders to prepare their gear and many
> more), getting WPC approval for temporary shift of station,
> liasioning with Govt. of Maharashtra (Relief & Rehabilitation
> Cell) and his help provided to Koyna Dam officials for their
> wireless station setup.
>
> Thanks also goes to MARS members (Vijay-VU2VVP, Rajan-VU2RIG,
> Basappa-VU2NXM, Jagdish-VU2KIB) from Mumbai who monitored and made
> contact with ARES teams on HF.
>
>
> My experience of this Field Day:
> I was carrying my HF/VHF gear (for the first time in a backpack
> approx 24kg) and 34AH battery (separate approx.15kg) from Mumbai.
> I charged that battery using a solar panel for 4.5hrs (in between
> the two scheds) on Day-2. The panel was put up on the tower near
> grampanchayat for telephone connection which was lying unused.
> This battery supported my TS-50 & Laptop very well (uptill
> 11.22V).
>
>
> Things I learnt from this Exercise:
> 1. Optimum use of RF power (it's very tricky when you have only
> 10/50/100W setting in the rig like Ts-50)
> 2. It was my first hand experience to operate QRP.
> 3. Always put up 2M setup with external antenna for local
> communication, even if you are not in direct 2M contact with other
> teams.
>
> Things I'm planning to implement in future:
> 1. Alternate arrangement for charging battery (may be small
> portable solar panel)
> 2. Making the backpack lightweight and well organised (e.g. may
> need to replace the coax from RG-58 to Teflon)
> 3. Update the info related to ARES and disaster communication with
> the help of Internet (e.g. egroups like "hfpack")
> 4. Portable Voice/Packet Emergency Communication solution whenever

Subject: [CQ_VU] VU2AJ - Dutt, Silent Key

Dear Friends,

OM Dutt, VU2AJ became a Silent Key today afternoon in Hyderabad at around 3.30 pm due to heart attack. The funeral will take place to night at around 7.00 pm.

He retired as the Director General of Overseas Communications Service, now known as VSNL.

He became a ham very long back and his amateur radio licence no. was 45 (as per Radcom 2000 callbook). He used to be very active from Mumbai in CW and SSB and has won dozens of International awards.

May his soul rest in peace.

Condolences from National Institute of Amateur Radio.

Now available in MARS Library!!

QST - JANUARY'2004 'ANNUAL VINTAGE RADIO ISSUE' Contents :-

TECHNICAL
a.. The Incredible Saga of a DX-100 Restoration Run Amok - Brian Wood, W0DZ
Overcoming broken glass, sticker residue and all sorts of other challenges, W0DZ set about bringing an old rig back to life.

a.. Restoring a Homebrew Transmitter - Glenn Brown, W8JZI
Back in '52 almost everyone was doing it. In 2003, only a few have the chance to taken on the challenge of bringing a two-tube transmitter back to life.

a.. Remote Your Morse Key Using an RF Link - Mark Spencer, WA8SME
Detach yourself from your station with this RF-linked wireless key.
(Using Parallax type 27995 receiver & 27996 transmitter; www.parallax.com)

a.. Product Review - Joel R. Hallas, W1ZR
a.. Ten-Tec Orion Model 565 HF Transceiver - www.tentec.com
The Orion is a triumph of substance over frivolous style. It's an impressive performer that will get the job done, but be prepared to invest a little more work to get optimal results.
b.. SGC ADSP2 add-on audio DSP - www.sgcworld.com
SGC ADSP2 second generation DSP modules can bring new life to older radios through modern digital signal processing techniques.

a.. New Products
a.. 2004 Shortwave Frequency Guide - www.klingenfuss.org (532p, $39.95+)
b.. 2004 Guide to Utility Radio Stations - www.klingenfuss.org (600p, Euro45+)
c.. EchoMac 1.12 Program written for MacOS-X - www.DogParkSoftware.com/EchoMac
d.. SGC MAC-200 Master Antenna Controller - www.sgcworld.com
e.. The Super Frequency List on CD-ROM - www.klingenfuss.org (Euro25+)
f.. MFJ-993 IntelliTuner Automatic Antenna Tuner from MFJ - www.mfjenterprises.com

NEWS AND FEATURES

a.. "It Seems to Us..." Nine Decades

a.. ARRL in Action - Dave Hassler, K7CCC
"Big Project" in Georgia; W1RFI hits BPL Highway; more.

a.. Baker Island, K1B - Crabs, Seabirds and Radio - Srecko (Fex) Moric, YU1DX
Braving high winds, unrelenting sun and thousands of hungry crabs, a group of hams from seven nations put K1B on the DX map. Its hard to find a more remote speck of land that Baker Island. That's one of the reasons it hadn't been activated until a multinational group of hams decided to brave the crabs, sun and wind to set up what became a record-breaking effort.

a.. "...And We Had Crystals" - Richard J. Thompson, Jr
"Without crystals, there was radio; with crystals, there was communications."
The development of the thin wafers of quartz we now take for granted played a significant role in the Allied victory in World War II.

a.. Seeing Things : A Short History of Panoramic Reception - Gil McElroy, VE3PKD
Before DigiPan, there was panoramic reception, invented by a French Ham in 1932.

a.. The Challenge of Being a Little Pistol - Rod Vlach, NN0TT
DXing with a kW and a couple of beams is okay... but a knock-your-socks-off stations is not required!

a.. Zen and the Casual RTTY Contester - Steve Ford, WB8IMY
You can enjoy the upcoming ARRL RTTY Roundup-with or without a big time station.
Don Hill - www.aa5au.com/rtty
RCKRTTY - www.rckrtty.de
WRITELOG - www.writelog.com

MUMBAI AMATEUR RADIO SOCIETY

Dear Friends,

The monthly meeting for Febuary shall be held on Sunday .. 8th Febuary 2004 at 10:00 AM Sharp at B.S.Bengelle Girls School at Churchgate..

The Agenda for the meeting is as follows:-

10:00 Distributation of Licences pending with the society.
10:05 Distributation of result sheets pending with the society.
10:15 De- Briefing meeting for Fox Hunt held on 25th/26th January at Lonavala (further details by ZRS)
11:00 Tea Break.
11:15 Enrollment of members interested and committed for Disaster Management Team of MARS.
11:30 Any other topics with the permission of the chair.
12:00 Meeting ends..

Feb. 06, 2004

Nilesh,

Please renew my enrolment (if there is any such procedure) in the Disaster Management Team of MARS. I am interested and committed for Disaster Management. I have completed Introductory, Intermediate and Advanced Amateur Radio Emergency Communication Courses of the ARRL in last quarter of 2003. In the Intermediate and Advanced Courses I scored 100% marks and first rank not only in my batches but among all the batches. I may probably be only Indian Ham who have completed Advanced Amateur Radio Emergency Communication Course of ARRL.

At present I am at Jaipur and am not able to attend the Montly Meeting on 8th Feb. However, I shall participate in any emergency drill.

I am interested and committed to go anywhere in India, if god forbid, any disaster does occur.

Please reply.

Some announcements

----Original Message Follows----
From: VU2JOS
To: niarindia@yahoogroups.com
Subject: [RADIOHAMS] New timing of AIR Net India

Date: Sun, 8 Feb 2004 06:52:16 -0800 (PST)

Dear Friends,

From Monday, 9th February 2004, AIR Net India will be
conducted at 7.00 pm IST (130 UTC) on 14.150 MHz.

This replaces 7.30 pm IST (1400 UTC) on 14.160 MHz.

(Info from VU2CBE/KNK via VU3BAO)

1547. RFID technology

Yahoo group: m_a_r_s
Date: 2004-02-13 14:20:59 UTC
From: Ankur Puranik
Topic: 1547 Message: 1547

What is Radio Frequency Identification (RFID)?

A basic RFID (Rasystem consist of three components:

An antenna or coil
A transceiver (with decoder)
A transponder (RF tag) electronically programmed with unique information

The antenna emits radio signals to activate the tag and read and write data to it. Antennas are the conduits between the tag and the transceiver, which controls the system?s data acquisition and communication. Antennas are available in a variety of shapes and sizes; they can be built into a door frame to receive tag data from persons or things passing through the door, or mounted on an interstate toll booth to monitor traffic passing by on a freeway. The electromagnetic field produced by an antenna can be constantly present when multiple tags are expected continually. If constant interrogation is not required, the field can be activated by a sensor device.

Often the antenna is packaged with the transceiver and decoder to become a reader (a.k.a. interrogator), which can be configured either as a handheld or a fixed-mount device. The reader emits radio waves in ranges of anywhere from one inch to 100 feet or more, depending upon its power output and the radio frequency used. When an RFID tag passes through the electromagnetic zone, it detects the reader?s activation signal. The reader decodes the data encoded in the tag?s integrated circuit (silicon chip) and the data is passed to the host computer for processing.

RFID tags come in a wide variety of shapes and sizes. Animal tracking tags, inserted beneath the skin, can be as small as a pencil lead in diameter and one-half inch in length. Tags can be screw-shaped to identify trees or wooden items, or credit-card shaped for use in access applications. The anti-theft hard plastic tags attached to merchandise in stores are RFID tags. In addition, heavy-duty 5- by 4- by 2-inch rectangular transponders used to track intermodal containers or heavy machinery, trucks, and railroad cars for maintenance and tracking applications are RFID tags.

RFID tags are categorized as either active or passive. Active RFID tags are powered by an internal battery and are typically read/write, i.e., tag data can be rewritten and/or modified. An active tag?s memory size varies according to application requirements; some systems operate with up to 1MB of memory. In a typical read/write RFID work-in-process system, a tag might give a machine a set of instructions, and the machine would then report its performance to the tag. This encoded data would then become part of the tagged part?s history. The battery-supplied power of an active tag generally gives it a longer read range. The trade off is greater size, greater cost, and a limited operational life (which may yield a maximum of 10 years, depending upon operating temperatures and battery type).

Passive RFID tags operate without a separate external power source and obtain operating power generated from the reader. Passive tags are consequently much lighter than active tags, less expensive, and offer a virtually unlimited operational lifetime. The trade off is that they have shorter read ranges than active tags and require a higher-powered reader.

Read-only tags are typically passive and are programmed with a unique set of data (usually 32 to 128 bits) that cannot be modified. Read-only tags most often operate as a license plate into a database, in the same way as linear barcodes reference a database containing modifiable product-specific information.

RFID systems are also distinguished by their frequency ranges. Low-frequency (30 KHz to 500 KHz) systems have short reading ranges and lower system costs. They are most commonly used in security access, asset tracking, and animal identification applications. High-frequency (850 MHz to 950 MHz and 2.4 GHz to 2.5 GHz) systems, offering long read ranges (greater than 90 feet) and high reading speeds, are used for such applications as railroad car tracking and automated toll collection. However, the higher performance of high-frequency RFID systems incurs higher system costs.

The significant advantage of all types of RFID systems is the noncontact, non-line-of-sight nature of the technology. Tags can be read through a variety of substances such as snow, fog, ice, paint, crusted grime, and other visually and environmentally challenging conditions, where barcodes or other optically read technologies would be useless. RFID tags can also be read in challenging circumstances at remarkable speeds, in most cases responding in less than 100 milliseconds. The read/write capability of an active RFID system is also a significant advantage in interactive applications such as work-in-process or maintenance tracking. Though it is a costlier technology (compared with barcode), RFID has become indispensable for a wide range of automated data collection and identification applications that would not be possible otherwise.

Developments in RFID technology continue to yield larger memory capacities, wider reading ranges, and faster processing. It is highly unlikely that the technology will ultimately replace barcode ? even with the inevitable reduction in raw materials coupled with economies of scale, the integrated circuit in an RF tag will never be as cost-effective as a barcode label. However, RFID will continue to grow in its established niches where barcode or other optical technologies are not effective. If some standards commonality is achieved - whereby RFID equipment from different manufacturers can be used interchangeably - the market will very likely grow exponentially.

This really has immense potential in next generation tracking devices.. Example like Toll Gates at Mumbai Entries, where there may be gates at all.. All Number plates with Passive/Active RFID devices can be charged by remote sensors. And at the month end Licensee can be chargeg accordingly hhi hii

Thank Ankur for your Usefull inputs on the Group..

> RFID systems are also distinguished by their
> frequency ranges. Low-frequency (30 KHz to 500 KHz)
> systems have short reading ranges and lower system
> costs. They are most commonly used in security
> access, asset tracking, and animal identification
> applications. High-frequency (850 MHz to 950 MHz and
> 2.4 GHz to 2.5 GHz) systems, offering long read
> ranges (greater than 90 feet) and high reading
> speeds, are used for such applications as railroad
> car tracking and automated toll collection. However,
> the higher performance of high-frequency RFID
> systems incurs higher system costs.
>
> The significant advantage of all types of RFID
> systems is the noncontact, non-line-of-sight nature
> of the technology. Tags can be read through a
> variety of substances such as snow, fog, ice, paint,
> crusted grime, and other visually and
> environmentally challenging conditions, where
> barcodes or other optically read technologies would
> be useless. RFID tags can also be read in
> challenging circumstances at remarkable speeds, in
> most cases responding in less than 100 milliseconds.
> The read/write capability of an active RFID system
> is also a significant advantage in interactive
> applications such as work-in-process or maintenance
> tracking. Though it is a costlier technology
> (compared with barcode), RFID has become
> indispensable for a wide range of automated data
> collection and identification applications that
> would not be possible otherwise.
>
> Developments in RFID technology continue to yield
> larger memory capacities, wider reading ranges, and
> faster processing. It is highly unlikely that the
> technology will ultimately replace barcode ? even
> with the inevitable reduction in raw materials
> coupled with economies of scale, the integrated
> circuit in an RF tag will never be as cost-effective
> as a barcode label. However, RFID will continue to
> grow in its established niches where barcode or
> other optical technologies are not effective. If

> some standards commonality is achieved - whereby
> RFID equipment from different manufacturers can be
> used interchangeably - the market will very likely
> grow exponentially.

1549. how about a 100" TV in just Rs. 500

Yahoo group: m_a_r_s
Date: 2004-02-16 09:29:20 UTC
From: Ankur Puranik
Topic: 1549 Message: 1549

http://bigscreentv.20m.com/photo.html

hey guys...this is really amazing and it really works.....i have tried it out myself and it works satisfactorily....just that u gotta invert your tv upside down and the image shows left as right and vice versa....(mirror)

I had an old fresnel lens that i experimented with....and it works amazing..!!! the lens costs around 400-500 rupees.

so u have a 100" tv @ home in just 500 rupees...try it out...

regards,

1550. VHF Repeater is up and working

Yahoo group: m_a_r_s
Date: 2004-02-19 12:17:41 UTC
From: vu2nlf
Topic: 1547 Message: 1550

dear friends,

You would be pleased to know that our MARS VHF new Repeater is up and working with very good results.. The temperarory operating frequency is 144.200 Mhz with + 600 Khz Shift.

As on now the repeater is operational from my QTH (NLF at Tardeo, south Mumbai) but soon it would be shifted to Andheri.

We would be conducting a test run for its coverage and accessability on Saturday at 2 Pm. All Mumbai hams are requested to kindly be on air at 2pm and help us in this coverage survey. You MUST use your handy and try to trigger the repeater, preferably from your street level, and NOT use your external antenna. Triggering the repeater with your external antenna will not serve the purpose, then you might as well talk directly with the other station.

We would be setting up stations at Andheri and thane, to check the coverage.

The beauty of a repeater is WHEN you can use it from any street nuk and corner of our city. We soon hope to have a VHF coverage from all corners of Mumbai using a VHF HandHeld Set using rubber ducky.

please be on air on saturday and help us to acheive our goals.

Subject: [RADIOHAMS] AIR Net at 7.30 pm from today

Date: Wed, 25 Feb 2004 19:21:44 -0800 (PST)

Dear Friends,

The timing of AIR Net is being changed again from today February 26, 2004. The new timing is 7.30 pm (1400 UTC) and frequency is 14150 kHz.

This information was received from OM Yan VU2CBE/KNK, one of the regular net controllers.

(Till yesterday it was at 7.00 pm IST and before that it was at 7.30 pm)

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

You must be aware that our repeater No.1 is operational from South Mumbai on 144.200 Mhz + 600 Khz. Our repeater No.2 is likely to up by Sunday at Andheri and our repeater No.3 in another 15 days at Thane. The Matheran Repeater and the ECHO LINK Repeater are also likely to be up very soon.

Many were excited and 3 days ago there were 17 checkins on the "NIGHT OWLS NET", 2 days age there were 11 checkins, 1 days ago there were 5 , today also there were only 5. Today the whole day nobody used the repeater.

One wonders if these repeaters that we are putting up, will they be really used ? or are we wasting our time and money ?

73

NLF

Dear NLF,

Amateur radio is a hobby. I guess when HAMs have spare time after their work and family life, they would come on air.

There are a certain group of people who are dying to get on air as of now but don't have their tickets

I applaud the efforts put in by you and your team for the repeater setup. Thanks NLF,IZO,OZO,ZRS and SWL Ankur. If i have left anyone out please let me know.

I personally feel if HAMS could carry their handy's whether to work or when they are out with family, a short QSO would not disturb their other priorities, but would encourage the growth of HAM radio in the city of Mumbai.

I completely agree that if so much time, effort and money has been invested in the repeater it should atleast have some activity! Maybe HAMS could find time to get on air just while travelling as Anurag put in his mail. A lot of us spend time on the road just getting from one place to another. Could this time not be used for QSO?

NLF another clarification i would need from you on behalf of all HAMs.The traffic rules are very rigid about using cell phones in vehicles while driving, does this apply to Handheld Radios as well.

This would be someting worth looking into. Anyone has any idea about this law?

In the end, I feel if more hams would get on air it would be encouraging not only for the senior hams who have put in so much effort to get this hobby off the ground but also to new comers who might then develop and interest for the hobby just by listening to you on the train or bus, say for example.

Cheers

1557. Two Antennas

Yahoo group: m_a_r_s
Date: 2004-02-28 05:14:46 UTC
From: Nirav Sanghavi
Topic: 1557 Message: 1557

Two antennas meet on a roof, fall in love, and get married. The ceremony wasn't much, but the reception was brilliant.

>
>
>Dear NLF,
>
>Amateur radio is a hobby. I guess when HAMs have spare time after their work and family life, they would come on air.
>
>There are a certain group of people who are dying to get on air as of now but don't have their tickets
>
>I applaud the efforts put in by you and your team for the repeater setup. Thanks NLF,IZO,OZO,ZRS and SWL Ankur. If i have left anyone out please let me know.
>
>I personally feel if HAMS could carry their handy's whether to work or when they are out with family, a short QSO would not disturb their other priorities, but would encourage the growth of HAM radio in the city of Mumbai.
>
>I completely agree that if so much time, effort and money has been invested in the repeater it should atleast have some activity! Maybe HAMS could find time to get on air just while travelling as Anurag put in his mail. A lot of us spend time on the road just getting from one place to another. Could this time not be used for QSO?
>
>NLF another clarification i would need from you on behalf of all HAMs.The traffic rules are very rigid about using cell phones in vehicles while driving, does this apply to Handheld Radios as well.
>
>This would be someting worth looking into. Anyone has any idea about this law?
>
>In the end, I feel if more hams would get on air it would be encouraging not only for the senior hams who have put in so much effort to get this hobby off the ground but also to new

comers who might then develop and interest for the hobby just by listening to you on the train or bus, say for example.

1560. Cars and Handy

Yahoo group: m_a_r_s
Date: 2004-03-03 16:25:52 UTC
From: Shantanu Chand
Topic: 1554 Message: 1560

Dear IZO,
Thanks i am sure that would have helped a lot of hams who were hesitating to use their handies while in their cars. I hope now MARS can see some "mobile" action as well.

I just hope they use their mobile rigs responsible and drive safe.

Thanks once again IZO.

1571. IARU Celebrates World Amateur Radio Day

Yahoo group: m_a_r_s
Date: 2004-03-12 09:58:49 UTC
From: VU2UGO
Topic: 1571 Message: 1571

>>> IARU Celebrates World Amateur Radio Day <<<

Friday, April 18, is World Amateur Radio Day, celebrated each year on the anniversary of the founding of the International Amateur Radio Union (IARU http://www.iaru.org/). The IARU is the worldwide federation of national Amateur Radio organizations representing radio amateurs in 158 countries. On this, the 78th anniversary of its inaugural meeting in Paris, the IARU dedicates World Amateur Radio Day to the radio amateurs, educators, and administrators who use Amateur Radio to support technology education in the classroom. Such programs are not confined to the developed countries. They are even more valuable in countries where telecommunications technology is not yet commonplace and where natural disasters and other calamities can overload or even disrupt regular communications circuits.

Radio technology offers many tools for teachers as they bring technology into the curriculum. In schools without internet connections, Amateur Radio can help with interactive communications and shortwave reception. Teachers can inject fun while helping students learn basic electricity and regional geography. Social studies teachers can use Amateur Radio and shortwave receivers to teach about different cultures the world over. Earth science and physics teachers can use radio to teach electricity and electronics, radio wave propagation, weather and atmospheric science. Language arts teachers may use radio to supplement writing, speaking and listening skills while providing access to numerous foreign languages from the lips of native speakers.

With almost three million licensees, in nearly every country on Earth, the Amateur Service provides an ample reservoir of expertise for use in classrooms throughout the world. (IARU news release)

ARRLWeb: The Amateur Radio Crossword PuzzlerThe Amateur Radio Crossword Puzzler

By H. Ward Silver, N0AX
June 20, 2003

Units, Units Everywhere!

If the ministrations of the local meteorologist is keeping you under the weather, here's a good opportunity to meter your mastery of metrology instead. This quiz is full of units, their abbreviations, and combinations thereof. How do you measure up?

Ward Silver, N0AX, (aka The Metonymic Master of Meter) authors--among numerous other things--the Amateur Radio Crossword Puzzler, which appears twice a month on the ARRL Web site. He can be reached by e-mail at n0ax@... or by surface mail at Aetherworks Publishing, 22916 107th Ave NW, Vashon, WA, 98070.

Across

1. one-thousandth
4. transmitter (abbr.)
6. one-billionth
9. unit of reactive power
10. rush
11. 1 across times 12 across
12. unit of inductance
13. metal used in wires (chemical symbol)
17. units of light intensity
19. number of events per unit time
21. ambulance medical personnel
22. weight of one microliter of water
23. distance from bottom to top
24. prefix of Middle Eastern country
26. type of ac voltage measurement
28. prefix of neighbor to 25 across
30. bipolar junction materials
32. ac variation on power supply output
33. thread direction
34. unit of power
36. measure of impedance match
37. make a msitake
38. draw power from

40. prefix meaning all or every
42. OD minus twice wall thickness
44. unit of capacitance
47. a billion
49. units of weight
51. a speed that rhymes with race
52. not you
53. units of electromotive force
57. divide in two
58. units of current

Down

2. make longer
3. don't let this grow on your tower
4. attempt
5. not working properly
6. 6 across times 12 across
7. billionth of a meter
8. units of resistance
10. unidirectional current
12. unit of frequency
14. 360 of these in a circle
15. a million
16. measures with a moving needle
18. one-tenth of 56 down
20. type of engineer
25. resistance to ac current
27. earliest mode of transmission
29. 1 across squared squared
30. measure of acidity
31. unit of pressure
33. greek letter that moves your boat
34. how heavy an object is
35. slang for math of angles
39. audio frequency
41. opposite of stereo
43. to quench oscillations
45. light, common metal (chemical symbol)
46. power ratio to one milliwatt
48. written description of performance standard
50. units of time
53. voice unit (abbr.)
54. between QRP and HP
55. Antimony (chemical symbol)
56. 2.5 of these make an inch

> To all radio amateurs
>
> SB SPACE ARL ARLS005
> ARLS005 A glimmer of hope for AO-40
>
> A weak "noise" on the AO-40 2.4-GHz beacon frequency has raised
> hopes that AO-40 may still be alive. AO-40 has been silent since
> January 27 (UTC), in the wake of a precipitous voltage drop. The
> satellite's controllers believe that one or more shorted battery
> cells are at the root of the problem.
>
> Colin Hurst, VK5HI, of the AO-40 command team reports that on March
> 9 between 0310 and 0320 UTC (orbit 1541) he "noted a noise peak of 4
> to 5 dB" in the vicinity of the expected beacon frequency after he'd
> issued a transmitter reset command sequence to the satellite. "The
> width of this peak was about 5 kHz," he said. After listening for
> about 15 seconds, he issued a command to shut down the transmitter,
> and the noise peak disappeared.
>
> Hurst said he also transmitted several commands involving the
> auxiliary batteries but did not attempt to turn the beacon on again.
> "This tends to suggest that the IHU [Internal Housekeeping Unit
> computer] and L Band [1.2 GHz] receiver are operational," he said.
>
> The AO-40 command team theorizes that a cell in the main battery
> pack has shorted, clamping the bus voltage below the point where it
> can operate the satellite. The spacecraft's auxiliary batteries are
> believed to be in parallel with the main batteries, and commands
> sent so to swap to the auxiliary batteries have been unsuccessful.
> AO-40 Earth stations are continuing to send commands to the
```

> satellite in order to switch the batteries.
>

>
> This week's bulletin was made possible with information provided by
> HB9AAP, NC1L, W1NK, QRZ DX, the OPDX Bulletin, The Daily DX,
> 425DXnews, DXNL, WA7BNM and Contest Corral from QST. Thanks to all.
>
> SWAZILAND, 3DA. Look for Frosty, K5LBU, Chuck, W4GMY, Paul, N0AH,
> and Don, W0DM to be QRV as 3DA0CF, 3DA0CG, 3DA0AX and 3DA0DM,
> respectively, from March 13 to March 21. Activity will be on 160 to
> 10 meters, including the newer bands, using CW, SSB, RTTY and PSK31.
> QSL to home calls.
>
> DEMOCRATIC REPUBLIC OF CONGO, 9Q. Gus, SM5DIC is QRV as 9Q0AR until
> March 20. Of late he has been active on 20, 17, 15 and 10 meters
> using CW, SSB, RTTY and PSK31. QSL via SM5BFJ.
>
> TAIWAN, BV. Amateurs BV8BC, BV8BM, BV8BQ, BV8CM, BX8AAA and BM8BTM
> are active as BV9O from Orchid Island, IOTA AS-155, until March 15.
> QSL direct via BV8BC.
>
> MADEIRA ISLANDS, CT3. Rosel, DL3KWR and Hardy, DL3KWF are QRV as
> CT3/homecalls until March 18 from Ilha da Madeira, IOTA AF-014.
> Activity is generally during their late afternoon and evening hours,
> mainly on the newer bands using CW. QSL to home calls.
>
> ANGOLA, D2. Joao, CT1BFL and Durval, CU3BW are working in the
> capital city of Luanda during the next six months and are QRV as D2U

> and D2DB, respectively. Activity is on all bands and modes. QSL
> via EA7JX.
>
> JERSEY, GJ. Ron, G4DIY and Lee, G0DBE will be QRV as GP0STH from
> March 15 to 20. QSL via G4DIY. Meanwhile, Pete, K8PT and Craig,
> K3PLV are QRV as MJ/homecalls until March 17. Activity is on all
> bands using CW, SSB and RTTY. QSL to home calls.
>
> SWITZERLAND, HB. During 2004 the Swiss Amateur Radio Club, USKA, is
> QRV as HB75A in celebration of its 75th anniversary. QSL via
> operators' instructions.
>
> SWEDEN, SM. Special calls SC0AG, SC1AG, SC2AG, SC3AG, SC4AG, SC5AG,
> SC6AG and SC7AG are QRV throughout the year to celebrate the 30th
> anniversary of the Scandinavian CW Activity Group. QSL via
> operators' instructions.
>
> WEST KIRIBATI, T30. Rolf is QRV as T30ZF and has been active on 20
> meters from around 0700 to 0900z. He has also been QRV on 40 meters
> around 1600z. QSL via DK2ZF.
>
> MALI, TZ. Boe, TZ6BOE has been QRV on 20 meters around 1730z. QSL
> via LA7OF.
>
> UZBEKISTAN, UJ. Fedor, UK9AA has been QRV on 160 meters around
> 0130z. QSL direct.
>
> CANADA, VE. Special event station VB5C is QRV until March 30 to
> commemorate the 75th anniversary of the Canadian Curling Brier. QSL
> via VA5DX.
>
> IRAQ, YI. Jerry, K6MD is licensed as YI9MD and expects to be in
> Mosul until January 2005. QSL via W6OAT.

1576. Report on Hamfest 2003

Yahoo group: m_a_r_s
Date: 2004-03-13 10:20:42 UTC
From: Nirav Sanghavi
Topic: 1576 Message: 1576

A new report has come up on the ether. I know that this report is not adequate. Any body know if it is entirely true.
http://www.niar.org/qst.html

Or was my feeling proud of our MARS winning the Best Presentation Award something gone in vain? http://groups.yahoo.com/group/m_a_r_s/message/1417

> ==>A CLOSE ENCOUNTER OF THE BPL KIND WITH FCC CHAIRMAN
>
> A Broadband over Power Line (BPL) home demonstration in the Raleigh, North
> Carolina, area March 5 provided an opportunity for area amateurs to take
> their concerns about the technology to FCC Chairman Michael Powell face to
> face. While ARRL Public Information Officer Gary Pearce, KN4AQ, doesn't
> believe his brief encounter with the FCC head and amateurs' longer
> discussions with Commission and electric utility staffers will stop or
> slow the seeming BPL juggernaut, they were valuable anyway.
>
```

> "We consider the day successful in the context that we were able to speak
> directly with several high-level FCC officials, key Progress Energy
> officials and the CEO of Amperion--a BPL provider," Pearce said.
> "Long-term success will be measured by how much of a problem BPL poses to
> Amateur Radio, or how much of a problem is avoided."
>
> While Pearce says he only spent about 30 seconds with Powell, he did tell
> the chairman that amateurs believe BPL's interference potential has been
> understated and will prove more difficult to resolve than the FCC has
> suggested in its February BPL Notice of Proposed Rule Making (NPRM). "What
> I didn't know when I talked to him," he added, "was that a question that
> we had sent to the local newspaper had been posed earlier in the day at a
> press conference about interference."
>
> Powell had responded to the question by saying the FCC would not let BPL
> interfere with critical services, the Raleigh News & Observer reported.
> "The question is whether it does, and to what extent, and what limits can
> be placed to make sure it doesn't," Powell said. "We've been fully
> committed to only allowing things within the range of what we're convinced
> won't create impermissible interference."
>
> But Powell went on to say that if BPL can provide broadband access
> anywhere there's a power outlet, "We're not going to be easily dissuaded
> from doing something that has that much potential."
>
> Progress Energy and BPL partner Amperion now are operating three field
> test sites in Wake County south of Raleigh. Acting on a tip, Pearce and
> several other area amateurs--ARRL Technical Specialist Frank Lynch, W4FAL,
> among them--showed up at the prearranged BPL demonstration at a residence
> near Fuquay-Varina.
>
> While Pearce witnessed the demo inside, others, including Wake County ARRL
> Emergency Coordinator Tom Brown, N4TAB--an engineer--stayed outside to
> chat with Powell Senior Legal Advisor Chris Libertelli. Brown said the
> "outside" delegation reiterated the amateurs' belief that BPL industry
> claims are misstated and wrong. "Overall," he said, I think we were
> successful in illuminating a few issues and opening more doors instead of
> closing them."
>
> Pearce told ARRL that a few hams--most a half-mile or so away from the
> field test sites--already have identified BPL interference on 10 and 12
> meters. But he was unsuccessful in getting Powell or others in the FCC
> delegation to take a quick spin in his mobile radio-equipped vehicle to
> show him what BPL sounded like "from our perspective." The FCC officials
> suggested instead that the amateurs arrange a similar demonstration in
> Washington.
>
> Pearce and Brown believe that BPL is not technologically mature enough to
> ensure the sort of "interference mitigation" the FCC envisions in its
> NPRM. "Everyone is relying on the vendors' claims that their technology

> can solve all the problems," Pearce said. Brown concurred. "It's not
> anywhere near as adaptive as they would lead you to believe it is or want
> you to--by absence of further information--allow you to delude yourself,"
> he said. "It's not there yet."
>
> Pearce said he was happy to be able to put "a human face" on Amateur
> Radio's side of the issue. "We know they heard us and that we made a good
> impression," he said. "We hope it was a deep one as well."
>
> ==>EAGLES' JOE WALSH, WB6ACU, ENJOYS FIRST VISIT TO ARRL
>
> Well-known amateur and musician Joe Walsh, WB6ACU, of The Eagles, this
> week visited ARRL Headquarters for the first time in his 43 years as a
> ham. Accompanying Walsh to Newington March 5 and 6 was ham radio audio
> expert and manufacturer Bob Heil, K9EID. Both are ARRL Life Members.
> Besides touring ARRL, Walsh and Heil spent part of their weekend operating
> W1AW with ARRL staff members during the ARRL International DX Contest
> (Phone).
>
> "I'm looking forward to a pileup," Walsh said beforehand. He says he was
> bitten by the contest bug during a visit to the station of Ali Al-Futtaim,
> A61AJ, in the United Arab Emirates. "There were 50 guys at a time calling
> me, and before I knew it, I looked up and three hours had passed and I'd
> been logging 350 QSOs an hour," he recalled. "Then I realized what
> [contesting] was all about. It was like, 'Wow!' You just have to do it to
> understand how much fun it is."
>
> At W1AW, Walsh hopped from band to band working the contest, while Heil
> took the quieter route of ragchewing on 17 meters. He also assisted the
> contest effort by repairing a couple of headsets. Walsh and Heil at one
> point put W1AW on AM on 40 and 75 meters. During the contest, more than a
> few operators took a moment to say hello to Walsh or to tell them they
> were fans.
>
> Walsh said his HQ tour proved to be an eye opener. "You read all the
> different things in QST--the DX columns and technical articles--but people
> don't realize that there are a number of departments, and they're staffed
> with real people, the many people that it takes to put out QST and provide
> [member] services."
>
> Walsh also marveled at Hiram Percy Maxim's rotary spark gap transmitter
> "Old Betsy," now residing in the W1AW lobby. "It's special just sitting
> here at W1AW, soaking up 100 years of Amateur Radio," he remarked. "It's
> everything I expected it to be, and I've met a lot of great people."
>
> Walsh, who's also performed with The James Gang and enjoyed a solo career,
> says he got into Amateur Radio in 1960, shortly after moving to New York.
> Becoming a radio amateur was a pivotal point in his life, he said, and his
> personal experience was one of the reasons he's become a donor to the ARRL
> Amateur Radio Education and Technology Program

> <http://www.arrl.org/FandES/tbp/>. Recalling how the kindness of his
> Elmer, Jim Walden, then W2IEY and now W6ESJ, had enriched his life back
> when he was the new kid in town, Walsh said he wanted to somehow pay it
> back.
>
> "I feel that I need to pass that kindness along and that's why I got
> involved in the Education and Technology Program," he said.
>
> Walsh said he envisions "some kid like me--new in town and new in
> school--and there's going to be a ham station there. I want there to be
> something there for him." Walsh said he worked hard for his license, and
> he's enjoyed Amateur Radio over the years.
>
> "I don't want those traditions and that fellowship to be lost," he said.
> "I'll do what it takes to have that survive."
>
> More information about Walsh's and Heil's visit is on the ARRL Web site
> <http://www.arrl.org/news/features/2004/03/11/1/>. A commemorative QSL
> card is available for those who worked W1AW during the contest. QSL
> requests go to W1AW, 225 Main St, Newington, CT 06111. Please include a
> self-addressed, stamped envelope with each request.
>
> ==>SOUTH CAROLINA MIDDLE SCHOOLERS LOG SUCCESSFUL SPACE CONTACT
>
> Students at a South Carolina middle school who spoke via ham radio with
> the International Space Station this week enjoyed the experience so much
> they're already eager to do it again. On March 8, youngsters at DuBose
> Middle School in Summerville questioned ISS Crew Commander Mike Foale,
> KB5UAC, about life aboard the space outpost. The contact was arranged via
> the Amateur Radio on the International Space Station (ARISS) program.
> Operating from NA1SS, Foale told the sixth through eighth graders that he
> was able to see prominent features of South Carolina from his vantage
> point in space. He said the ISS crew can see eclipses and other planets in
> space as well.
>
> "The moon just went by Jupiter, and it was really an amazing sight to see
> as I was going into the dark side of Earth," Foale said. The ISS was
> passing above the US West Coast at the time. In a follow-up reply, he
> described the inky darkness of the cosmic void and how stars and planets
> appear. "It is totally black in space," he said. "There are some parts of
> space where there are no stars visible at all, because there are gas
> clouds out there in the galaxy. And that is so dark, it's hard to
> imagine." Foale said stars appear brighter and more colorful from space
> than they do from Earth.
>
> One youngster wanted to know if astronauts could wear such appliances as
> hearing aids, braces or contact lenses in the zero-gravity environment of
> the ISS. "Actually, I wear ear plugs just because it's noisy up here,"
> Foale replied. "If I had braces, they wouldn't be a problem, and lots of
> astronauts do wear contact lenses."

>
> As he's indicated in past ARISS school group contacts, Foale said he
> "absolutely" would like to participate in a future mission to Mars, but he
> said he expected that job would fall to younger generations. "I do believe
> you and your classmates and your friends have a better chance of doing
> that than I do," he said.
>
> When the 10-minute contact was done, DuBose eighth-grade science teacher
> Alene Wilkins, KG4NKD, called it "the best experience I have had since I
> started teaching."
>
> Bill Hillendahl, KH6GJV, and Herb Sullivan, K6QXB, handled Earth station
> duties at W6SRJ in California. An MCI teleconference circuit relayed
> two-way audio between the two coasts.
>
> ARISS <http://www.rac.ca/ariss> is an international educational outreach
> program with US participation from ARRL, NASA and AMSAT.--some information
> provided by Charlie Sufana, AJ9N
>
> ==>MAINLANDERS KEEPING EYE ON HAWAII AMATEUR RADIO ANTENNA BILLS
>
> Two Amateur Radio antenna bills are continuing to progress through the
> Hawaii State Legislature. House Bill 2773 would allow Hawaiian amateurs
> living in condominiums to install antennas on their units under certain
> guidelines. HB 2774 would permit antenna installations, with conditions,
> by Hawaiian amateurs living in subdivisions subject to homeowners'
> association covenants, conditions and restrictions (CC&Rs).
>
> The progress of both bills also is under close scrutiny by amateurs on the
> mainland. The ARRL submitted testimony on the bills' behalf when they were
> heard last month by the Hawaii House Committee on Consumer Protection and
> Commerce, chaired by their sponsor, Rep Ken Hiraki.
>
> ARRL Pacific Section Manager Kevin Bogan, AH6QO, says the two measures
> passed a third reading in the House and are continuing their legislative
> journey in the Senate, where they passed first reading March 9. The bills
> likely will be referred to the Senate Consumer Protection and Housing
> Committee.
>
> "Several hams are working on the text of amendments to the bills, so the
> bills aren't as broad and will have more chance of passing," Bogan said.
> What he termed a "small working group of hams" also plans to visit
> committee members to acquaint them with the bills, once they're referred,
> ask for their support and answer questions. Bogan is calling on Hawaii
> amateurs to draft e-mails or letters to their state senators or to even
> visit them, if convenient.
>
> "We aren't preparing form letters as we feel it is much more effective to
> say it in your own words," he added.
>

> Bogan is asking hams in Hawaii to develop written testimony in preparation
> for an eventual Senate hearing and to attend the hearing, once scheduled.
> He reminded amateurs to be sure to reference the bill numbers and their
> descriptions when writing lawmakers and to clearly state why they're
> seeking their support. He also asked amateurs to e-mail
> <kbogan@...> him to report any correspondence or contacts with
> lawmakers regarding the bills.
>
> Both bills are available on the Hawaii State Legislature Web site: HB
> 2773:
> <http://www.capitol.hawaii.gov/site1/docs/getstatus2.asp?billno=HB2773>;
> HB 2774:
> <http://www.capitol.hawaii.gov/site1/docs/getstatus2.asp?billno=HB2774>.
>
> ==>A GLIMMER OF HOPE FOR AO-40
>
> A weak "noise" on the AO-40 2.4-GHz beacon frequency has raised hopes that
> AO-40 may still be alive. AO-40 has been silent since January 27 (UTC), in
> the wake of a precipitous voltage drop. The satellite's controllers
> believe that one or more shorted battery cells are at the root of the
> problem.
>
> Colin Hurst, VK5HI, of the AO-40 command team reports that on March 9
> between 0310 and 0320 UTC (orbit 1541) he "noted a noise peak of 4 to 5
> dB" in the vicinity of the expected beacon frequency after he'd issued a
> transmitter reset command sequence to the satellite. After listening for
> about 15 seconds, he issued a command to shut down the transmitter, and
> the noise disappeared. Hurst said he also transmitted several commands
> involving the auxiliary batteries but did not attempt to turn the beacon
> on again.
>
> "This tends to suggest that the IHU [Internal Housekeeping Unit computer]
> and L Band [1.2 GHz] receiver are operational," Hurst said.
>
> The AO-40 command team theorizes that a cell in the main battery pack has
> shorted, clamping the bus voltage below the point where it can operate the
> satellite. The spacecraft's auxiliary batteries are believed to be in
> parallel with the main batteries, and AO-40 Earth stations have been
> attempting to command the satellite to switch to the auxiliary batteries.
>
> Updates on AO-40 are available on the AMSAT-DL Web site
> <http://www.amsat-dl.org/journal/adlj-p3d.htm>.
>
> ==>HAM COMMUNITY RALLIES TO HELP INJURED AMATEUR
>
> The Amateur Radio community has rallied to the aid of well-known Colorado
> 6-meter operator and ARRL member Mike Newbold, K0YO. Newbold, 52, is
> recovering from injuries he received last December in Baja, Mexico, at the
> hands of assailants who beat him savagely, stole his vehicle and radio
> gear--virtually everything he owned was in his pickup truck--and left him

> for dead. Now back home, he's had lots of support from the amateur
> community.
>
> "My ham friends are some of the best in the world," Newbold said. "I am
> making great progress on a long road which is made easier by their
> kindness." His main physical problem is his eyesight, which suffered as a
> result of head injuries received in the attack. Most of his medical
> expenses are being covered.
>
> Newbold's friend Gary Yantis <gyantis@...>, W0TM, has been tracking
> Newbold's progress and set up a Web page <http://www.w0tm.com/k0yo> that
> provides information for those interested in assisting K0YO. "Well wishes
> have meant as much, or more, to Mike than replacement of any of the items
> that were stolen," Yantis says. "He mostly needs to hear from people who
> care."
>
> Newbold retired early from coal mining due to medical problems that have
> kept him largely unemployed. He resides in modest circumstances in a
> remote area, and ham radio, which Newbold took up in 1995, has provided
> him with "a window to the world," Yantis said. Newbold's son, Travis, is
> KC0VQJ, and the two sometimes keep in touch via ham radio. K0YO is also an
> avid QRPer, DXer and CW op, among other things.
>
> One bright spot for Newbold when he returned home from his hospital stay
> in California was a QSL card from Hawaii--the last one needed for Worked
> All States on 6 meters.
>
> Cards, letters or e-mails can be sent to Mike Newbold <newbold@...>,
> 27200 Rte 14, Oak Creek, CO 80467.--some information provided by Phil
> Kirchbaum, N0KE
>
> ==>MOONBOUNCE PIONEER BOB SUTHERLAND, W6PO, SK
>
> Robert I. "Bob" Sutherland, W6PO (ex-W6UOV), of San Mateo, California,
> died January 11. He was 78. An active VHF-UHF operator in the 1960s
> through the 1980s, Sutherland was on the West Coast end of the first
> Amateur Radio moonbounce (EME) contact in 1960 when the Eimac Radio Club's
> W6HB and W1BU worked each other on 1296 MHz EME. An employee of tube
> manufacturer Eimac for nearly 50 years, Sutherland developed some of the
> more famous Eimac tube-based amps.
>
> "His contributions to the Amateur Radio field are legendary," said
> well-known VHF-UHF and EME operator Dave Olean, K1WHS. Olean says that
> while most amateurs know Sutherland for his EME work and his Eimac
> accomplishments, "most of his great deeds went unnoticed by many except
> for the legion of moonbounce operators whom he helped along the way."
> Olean says he was one of them, recalling how Sutherland helped him set up
> an EME station for 432 MHz.
>
> An ARRL member, Sutherland authored several articles for Ham Radio

> magazine, including "Design Data for a Two-Kilowatt VHF Linear" in 1969
> and "High-Performance 144-MHz Power Amplifier" in 1971. He also wrote "A
> High-Power Cavity Amplifier For The New 900-MHz Band" for QST in 1982.
> Sutherland was the recipient of the Central States VHF Society's John T.
> Chambers Award in 1977 for "his dedicated efforts in bringing EME
> technical information to amateurs worldwide through distribution of the
> famous Eimac EME Notes," which remain in circulation within the EME
> community along with his amplifier designs.
>
> Former QST "The World Above 50 MHz" Editor Bill Smith, W5USM, recalled
> Sutherland as "a modest, kind man of considerable intelligence with
> passion for his professional and Amateur Radio work." He credited
> Sutherland with much of the success moonbounce enjoys today. "He was
> accessible and willing to help," Smith said, adding, "I suggest looking
> toward the moon and saying, 'Thank you, Bob. Well done.'"
>
> ==>SOLAR UPDATE
>
> Sun gazer Tad "Tequila Sunrise" Cook, K7RA, Seattle, Washington, reports:
> Average daily sunspot numbers dropped from the week February 26-March 3 by
> nearly 24 points, and average daily solar flux was about the same, down by
> slightly more than two points. On March 9, Earth passed into a solar wind,
> and geomagnetic indices rose. At mid latitudes HF bands were probably
> usable on March 9 and 11 but not on March 10. In Alaska, however, the
> bands probably sounded dead.
>
> This propagation--or lack of it--is normal for Alaska, at least when
> geomagnetic conditions are active or stormy. Those magnetic lines of force
> converge toward the poles, and all that energy gets concentrated, yielding
> polar cap absorption. The convergence and concentration was intense enough
> this week that aurora was visible down into northern parts of the "Lower
> 48."
>
> Over the next few days geomagnetic conditions should settle down.
> Predicted planetary A index for March 12-15 is 20, 15, 10 and 8. Solar
> flux should drop down to around 100 by the beginning of the week (Monday,
> March 15).
>
> A large sunspot, number 570 is moving into the center of the visible solar
> disk, directly facing Earth. It is a possible source of flares.
>

From: Shantanu Chand
Topic: 1578 Message: 1578

Dear MARS Committee,

I am an SWL from the 2003 MARS Academy batch. Sometime in August 2003 i had paid up my fees for life membership. Till today i have not got my membership number nor have i got my receipt.

After consulting both the secretary and the treasurer i am still confused to what is happening. As i understand, I am entitled to a SWL cap, a MARS T-shirt(I had also registered for Hamfest 2003) and ofcourse a temporary id card.

Will some one please enlighten me on the progress of the same.

Thanks and regards

Shantanu Chand

Prashant,

As a life member of MARS, I would like to know whether
the memberships lapsed because of non payment or were
really cancelled? If cancelled, what were the reasons?

Kailash Gupta, VU2KIZ & KG6SQR

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

We are trying our best to increase VHF Activity in our wonder city Mumbai. In order to do so we are in process of installing 5 new repeaters for Mumbai. 1. South Mumbai . 2. Andheri. 3. Thane. 4. Matheran. 5. Echo Link.

Repeater No.1 is already functional, No.2 will go on line by Thursday Latest. 3. will go online by 31st March and No.4 before the A.G.M (1st of May 2004). The echo link will be installed after looking at the demand as the society will have to shell out Rs.1000/- approx every month for the Internet Lease Line.

We have also provided enough information for buying new rigs. The imports procedures have now be simplified and it is very easy to import any Ham Radio Equipment, further the list of all the dealers, models and prices in India have already been posted on the group.

Inspite of all this we feel sad to state that there is hardly any VHF activity in Mumbai, We have 111 + members with valid callsign, Another about 15 new callsigns on the way, but not even 20 are active, just about 10 are regulars. listed below are the status of all our valid members.

Please note this information is to best of my knowledge, there may be discrepancies, hence members are requested not be wise guys and start commenting on them, instead do something useful and help us activating other members.

dear shantanu,

You point is well taken, You Life Membership fee in cash is lying with me, Your membership is No. 171. I will clear the matter with the treasurer and I am sure your receipt and other stuff will be issued to you shortly.

All other Life members who have paid their fees and have not got there receipts, membership no. ID cards etc may please come forward and clear there pending issues.

Further I request all the members to make their payments directly to the Treasurer, (as I end up doing the work of the Secretary and the Treasurer). Please also make your payments in Cheque so that there is proper accountability. Our society is growing hence proper paper work would help us in improvising the services.

Enter your vote today! A new poll has been created for the
m_a_r_s group:

Reasons for HAMS not coming on
air.Please enter the reason why you
feel HAMS in Mumbai are not coming on
air even with the repeater up. Your
identity will not be known so go ahead
and give your frank opinions.

o No Time
o No Equipment
o Lack of Interest
o Family Pressure
o Other Activities

To vote, please visit the following web page:

http://groups.yahoo.com/group/m_a_r_s/surveys?id=1186970

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Dear All,

Please visit the "Polls" link and give us your feedback on why you feel HAM VHF activity is dying in Mumbai. The poll is absolutely confidential and no identity will be know. So go right ahead and let MARS know the real reasons for this.

1587. Repeater Frequency Not for direct QSO

Yahoo group: m_a_r_s
Date: 2004-03-16 02:28:59 UTC
From: vu2nlf
Topic: 1587 Message: 1587

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

The repeater No.1 in south mumbai is working quite well, The Andheri repeater will also be up very shortly. It has been noticed by many active hams that some of us are using the repeater frequency for direct QSO. meaning using the RX frequency for RX and TX, hence not triggering the repeater, but having a direct QSO. By doing this they are blocking the repeater frequency and it is not available for others to use.

All hams are therefore requested to refrain from using the repeater frequency for Direct QSO, there are many many frequencies available, we would appreciate if they QSY to some other frequency for Direct QSO.

Looking forward to your kind Co-operation in the matter.

1588. VHF Activity Statistics.- important info recieved - eye opener

Yahoo group: m_a_r_s
Date: 2004-03-16 06:58:34 UTC
From: ZYROS ZEND
Topic: 1588 Message: 1588

dear nlf

sincerly thank you for taking the trouble and leting us all know who is active and not on vhf

i shall make it a point to be more regular on vhf activity and make use of the repeater also which has been put up with alooooooooooooooot of hard work and time and money . salams to all

thanks again c u all on vhf

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

We are trying our best to increase VHF Activity in our wonder city Mumbai. In order to do so we are in process of installing 5 new repeaters for Mumbai. 1. South Mumbai . 2. Andheri. 3. Thane. 4. Matheran. 5. Echo Link.

Repeater No.1 is already functional, No.2 will go on line by Thursday Latest. 3. will go online by 31st March and No.4 before the A.G.M (1st of May 2004). The echo link will be installed after looking at the demand as the society will have to shell out Rs.1000/- approx every month for the Internet Lease Line.

We have also provided enough information for buying new rigs. The imports procedures have now be simplified and it is very easy to import any Ham Radio Equipment, further the list of all the dealers, models and prices in India have already been posted on the group.

Inspite of all this we feel sad to state that there is hardly any VHF activity in Mumbai, We have 111 + members with valid callsign, Another about 15 new callsigns on the way, but not even 20 are active, just about 10 are regulars. listed below are the status of all our valid members.

Please note this information is to best of my knowledge, there may be discrepancies, hence members are requested not be wise guys and start commenting on them, instead do something useful and help us activating other members.

This is with reference to the article in QST MARCH 2004 EDITION and also to the email from NIAR on vuhams yahoo group. I would like to clarify that the BEST PRESENTATION TROPHY was won by VU2 NLF, Nilesh Rathod (MARS)for the presentation on Disaster Management at Hamfest 2003 held at Gandhinagar. The above article and email posting have created a bit of confusion among fellow hams as to who has really won the trophy. As per my attendance at Hamfest 2003 , the trophy was certainly given to VU2NLF for the BEST PRESENTATION.

I would like the managing committee of Hamfest 2003 to come forward and clarify the stated matter.

An immediate clarification would be appreciated.

Thanks

de vu2 ugj

Mumbai Amateur Radio Society

Dear Friends,

The VHF propagation has changed favourably, the summer ducting has began.. Today Morning,VU2HOC from Valad could trigger the Mumbai repeater will ease with a 5/9 signal...

In View to the above, I will once again start the "EARLY BIRDS NET" on 144.200 + shift, on our South Mumbai repeater at 07:00 AM sharp from tommorrow..

I hope many of our members will join us for the early morning QSOs.. especially with the DX stations.. hope to chat with you guys in the morning..

Please note I will see the demand of this net for a week, if I don't find many checkin, I will stop the net. (I don't have patience like VU2WLL, VU2NFS & VU2PJM to go on and on). It will be simply be as per demand and supply...

The Same goes for the repeaters.. We are likely to start the Andheri repeater tommorrow, if these repeaters are not used, then will also be shut down... Many of us are putting lot of efforts to increase the VHF activity in Mumbai, I sincerely hope that you appreciate and atleast USE all the facilities provided by our society..

Upon looking at the response, we will go ahead with the Thane Repeater, The Matheran Repeater & The ECHOLINK Repeater..

You have gone through lot of hard work for obtaining your licence, atleast for the sake of your effort make use of it...

Our members in Pune are also requested to TRY the repeater and take advance of the Ducting Season.. and if you are able to trigger, you may pass the word around in Non-Mars Hams to make use of it.

Once again all Licenced members are requested to make use of this repeaters throughout the day & night and do justice to the time and money invested by the society..

Dear friends,

It has been observed since last week that a few mails are being posted on the mars groups which appear to be posted from my email account which are not actualy being posted by me. They also sometimes posses a virus along with it which is luckily being filtered by yahoo services.

This has happened again today.

I kindly request you all not to download any attachments which appear with my mail. For the simple reason that my email account appears to be hacked and the attachments may contain a virus. Inspite of changing the passord ,someone is still able to post mails from my account to the mars groups.

In the mean time i will also inform the moderator of our mars groups and get this email id deleted from the list.

I will inform my new mail id soon.

inconvenience is regretted.

Mumbai Amateur Radio Society

Dear Friends,

I am very pleased to inform you that the Andheri Repeater is up and working fine.

As on now the Andheri Repeater is working on 144.100 Mhz + 600 Khz and the South Mumbai Repeater is working on 144.200 Mhz + 600 Khz. It is the first time in the history of Mumbai, when 2 repeaters are working at a time..

The Night Owls net and the Early Birds Net are conducted on South Mumbai repeater i.e. 144.200 Mhz +

At present both are repeaters are working in a stand alone mode, but very soon they will interconnected. There will be changes in the repeater frequencies, will you will be informed accordingly.

The Phase - III, Thane repeater is likely to go online by end of this month. All these repeaters are for your use,

Use them, live long and prosper...

Mumbai Amateur Radio Society

Dear Friends,

The Hamfest 2004 committee meeting will be held on Sunday 21st March 2004 at 10:00 AM sharp at B.S.Bengelle Girls School. All members on the committee are required to be present for the same.

All Members in the managing commitee, Advisory Committee and Working Committee are requested to call their team members and ensure that they are present for the meeting (file attached).

All Members not listed on the Hamfest Committee and wishing to offer their services may also join us for the meeting, The appropriate assignment will be allocated to them also.

73

NLF, Hamfest 2004, Convener.

1603. Fw: The ARRL Letter, Vol 23, No 12

> ==>ARRL URGES "THOUGHTFUL, CONSIDERED COMMENTS" ON PROPOSED BPL RULES
>
> Comments on the FCC Broadband over Power Line (BPL) Notice of Proposed
> Rule Making (NPRM) in ET Dockets 03-104 and 04-37 are due by Monday, May
> 3. The deadline for reply comments--comments on comments filed by
> others--is Tuesday, June 1. The ARRL will comment by the deadline on the
> FCC's proposals to amend its Part 15 rules to adopt new requirements and
> measurement guidelines for so-called "Access BPL" systems that provide
```

> broadband access via electric utility power lines. ARRL CEO David Sumner,
> K1ZZ, says the League recommends that members read the NPRM and develop
> their own thoughtful, considered comments that specifically address the
> FCC's BPL proposals, reflect positively on the amateur community and, if
> possible, offer alternative recommendations. He asked amateurs to keep
> four things in mind, however.
>
> "First, this is not a proceeding to 'permit' or 'authorize' BPL," he said.
> "BPL is already permitted under the existing Part 15 rules."
>
> Second, Sumner pointed out, the NPRM reaffirms that licensed services must
> be protected from harmful interference and are not required to protect BPL
> systems. "This is good, but we can't take it for granted that the
> principle will be honored in practice," he said.
>
> "Third," Sumner went on, "the NPRM proposes additional, new constraints on
> BPL to protect licensed services. The FCC did not go far enough, but at
> least the proposals aim in the right direction."
>
> Finally, while the League continues to believe firmly that BPL is "a very
> bad idea," arguing that the FCC should ban BPL "will not get us anywhere,"
> he concluded. Instead, Sumner says, amateurs must document beyond any
> doubt the levels of protection that must be given to over-the-air
> services, then leave it for others to decide whether BPL is feasible
> within those limits. "We need to prove that the risk of interference is
> significantly greater than the BPL proponents say it is," Sumner said.
>
> He also asserted that the FCC's proposed "interference mitigation"
> requirements fall far short of providing real protection from harmful
> interference, and that the Commission is ignoring the practical problems
> that will arise when Amateur Radio transmissions disrupt BPL systems.
>
> Carrier current systems like BPL are subject to the FCC's Part 15 rules
> governing unlicensed devices, and the FCC has acknowledged that "amateur
> operations are likely to present a difficult challenge" to BPL deployment,
> especially in the case of hams--an estimated 150,000 of them--who use
> high-gain antennas sited near power lines. The proposed rules remain
> silent on the issue of mitigating BPL interference to the estimated 70,000
> Amateur Radio HF mobile stations.
>
> Interference mitigation for mobile stations "is clearly impractical,"
> Sumner asserted. "Since BPL systems operating at the present Part 15 limit
> cause harmful interference to mobiles, the only solution is an absolute
> limit on radiated emissions that is lower than the present limit." He said
> the ARRL was in the process of determining scientifically what the limit
> must be.
>
> Sumner further noted that the NPRM does not mandate a publicly accessible
> BPL database to facilitate interference mitigation for fixed stations. In
> addition, the League wants the FCC to establish performance standards for

> BPL interference mitigation. "There must be severe enforcement penalties
> for failure to resolve a complaint in real time and for failure to
> maintain the database," he said.
>
> The League encourages anyone, particularly radio amateurs, who has
> actually experienced BPL interference to file detailed comments
> documenting the interference. "BPL proponents claim they are not getting
> interference complaints," Sumner noted. "If we let them claim their
> systems are 'clean' when we know they aren't, shame on us."
>
> Interested individuals and organizations may file comments via the
> Internet, using the FCC's Electronic Comment Filing System (ECFS)
> <http://www.fcc.gov/cgb/ecfs/>. In an unusual move, the FCC has added
> another docket number to the BPL proceeding. That could complicate filing
> comments and may lead to some confusion. Although the original FCC BPL
> Notice of Inquiry last April bore ET Docket 03-104, the recent BPL NPRM
> carries an additional docket number--ET Docket 04-37. The ARRL advises
> those posting comments to use the main ECFS page and file their comments
> on both proceedings--ET Docket 03-104 and ET Docket 04-37.
>
> When submitting a comment or viewing filed comments, ECFS users should
> type "03-104" or "04-37" (without quotation marks but including the
> hyphen) in the "Proceeding" field of the ECFS on-line form. Do not use the
> NPRM's FCC document number when filing or searching for comments. The ECFS
> permits attaching a file containing detailed comments prepared off-line.
>
> ARRL President Jim Haynie, W5JBP, will discuss the various implications of
> BPL with overnight radio talk show host Art Bell, W6OBB, on the Saturday,
> March 20, edition of the syndicated interview and call-in program Coast to
> Coast AM <http://www.coasttocoastam.com/>. Their interview is scheduled to
> air during the show's first hour (Sunday, March 21, 0600 UTC). The
> toll-free call-in number for Western US listeners is 800-618-8255. For
> Eastern US listeners it's 800-825-5033. First-time callers may use
> 775-727-1222. The "Wild Card Line"--for any caller--is 775-727-1295. The
> popular program, distributed by Premiere Radio Networks, airs live nightly
> from 10 PM until 2 AM Pacific Time on 430 stations and is available in
> every state. It's also available via the Web
> <http://www.coasttocoastam.com/streamlink/about.html>.
>
> ==>ARRL LAUNCHES ON-LINE TECHNICIAN CLASS
>
> Thanks to the League's new on-line Technician Class Course for Ham Radio
> Licensing (EC-010) <http://www.arrl.org/cce/Tech.html>, prospective hams
> can study for their ticket wherever they can connect to the Internet and
> on their own schedule. The course is offered through the ARRL
> Certification and Continuing Education (C-CE) program. Two new classes
> will open each month, and students may sign up anytime via the ARRL Web
> site <http://www.arrl.org/cce/courses.html#ec010> or by calling the New
> Ham Hotline, 800-326-3942. Class sessions begin April 6 and April 20. ARRL
> On-line Course Development Coordinator Howard Robins, W1HSR, says the new

> on-line Technician course will include everything needed to successfully
> pass the examination plus help with getting a foothold in ham radio.
>
> "The on-line approach to learning provides students a way to prepare for
> the exam at their own pace over an eight-week period with 24/7 access to
> the material," Robins said. The assignment of a very experienced "Elmer"
> or mentor to all students is one benefit of the on-line learning method.
> Another is a post-graduation on-line support group that's only available
> to course graduates. "This group will provide Elmering as the new ham gets
> started, as well as help with equipment and antenna questions or anything
> pertaining to Amateur Radio," Robins explained.
>
> Steve Ford, WB8IMY, Chuck Hutchinson, K8CH, and Larry Wolfgang, WR1B,
> developed the class material. The Technician course takes 20 to 25 hours
> to complete, and those finishing the class will take their tests at a
> volunteer examiner test session
> <http://www.arrl.org/arrlvec/examsearch.phtml>.
>
> Believed to be the first on-line Technician licensing class of its kind in
> the US, the course will closely follow the popular ARRL license manual Now
> You're Talking! The course fee--$99 for ARRL members and $139
> non-members--includes a copy of the book. (Regular ARRL membership
> <http://www.arrl.org/join.html> is $39 per year, which includes QST, the
> official journal of ARRL--the national association for Amateur Radio.)
>
> Students taking the class will be introduced to everything from casual
> operating to emergency and public service communication and to radio
> technology. Students also will learn about the role of radio clubs and of
> the ARRL Field Organization. A course syllabus
> <http://www.arrl.org/cce/syllabus.html#ec010> and a list of student
> activities <http://www.arrl.org/cce/student-activities.html#ec010> are on
> the C-CE Web site.
>
> The Technician Class Course for Ham Radio Licensing and the virtual ham
> radio campus are available through ARRL's partnership with the Connecticut
> Distance Learning Consortium, a nonprofit organization that specializes in
> developing on-line courses for Connecticut colleges and universities. For
> additional details, e-mail cce@....
>
> ==>ISS COMMANDER TALKS VIA HAM RADIO WITH SCOTTISH SCHOOL
>
> It might have been St Patrick's Day, but the accents of the youngsters
> questioning International Space Station Commander Mike Foale, KB5UAC, on
> March 17 definitely were Scottish. Nonetheless, the "luck of the Irish"
> was with the Amateur Radio on the International Space Station (ARISS)
> contact between the British-born Foale at NA1SS and Nancy Rocheleau,
> WH6PN, at Sacred Heart Academy in Honolulu. An MCI teleconference link
> provided the two-way audio for pupils at the Sgoil a' Bhac
> <http://www.sgoilabhac.org.uk/>--the School of Back--on the Isle of Lewis
> in the Outer Hebrides off Scotland's northwestern coast. Responding to one

> question, Foale explained that the ISS crew is not truly "weightless" in
> space.
>
> "What's actually happening is that we're all falling together," Foale
> explained, pointing out that the space station is continuously falling as
> it circles Earth. Because the spacecraft is moving rapidly horizontally,
> it misses Earth because of its curve. "So, we're falling around the
> earth--all of the things inside the space station are falling," he
> continued. "We actually think that we're weightless, but, in fact, the
> weight is still there, and gravity is still working on us."
>
> Apparent weightlessness in space has its pros and cons, Foale told the
> youngsters in response to another question. "In general, weightlessness
> causes problems because nothing stays put," Foale said. "You have to
> always have something sticky to hold things down." But, he went on to say,
> weightlessness does let the crew store things just about anywhere on the
> ISS.
>
> Foale said he was able to see some features of northern
> Scotland--including the Isle of Skye--when the ISS passed over that part
> of the world. "Yours is pretty easy to pick out too," he added. As he's
> said during past school group QSOs, one of his favorite leisure-time
> activities is to look at Earth.
>
> Other planets also were on the minds of the primary and secondary
> schoolers who attend the School of Back. The astronaut also told the
> Scottish students that he believes scientists may one day discover
> evidence of fossilized life on Mars. He also estimated that it would be
> "maybe 15 years" before humans are able to land on Mars.
>
> Sgoil a' Bhac has an enrollment of 190--the majority at the primary school
> level. Dating back to 1878, the school is committed to Gaelic language and
> culture. Foale visited the school last summer.
>
> The School of Back QSO--the first for a school in Scotland--marked the
> 130th ARISS school group contact since the arrival of the first ISS crew
> in late 2000. ARISS <http://www.rac.ca/ariss/> is an international
> educational outreach with participation by ARRL, AMSAT and NASA.
>
> ==>PAST ARRL PRESIDENT IS AMONG HAMVENTION 2004 AWARD WINNERS
>
> Hamvention <http://www.hamvention.org> has named ARRL President Emeritus
> George S. Wilson III, W4OYI, of Owensboro, Kentucky, the recipient of its
> 2004 Special Achievement Award. The Hamvention Awards Committee selected
> Wilson based on his decades of service to Amateur Radio through the ARRL,
> his public service and emergency communications work and his determination
> to overcome the debilitating effects of a 1995 stroke that left him
> partially paralyzed.
>
> A ham since age 16, Wilson--an attorney by profession--has remained active

> in Amateur Radio for more than 50 years. The ARRL's 11th president, Wilson
> suffered a stroke on February 11, 1995. During his rehabilitation in July
> of that year, he stepped down after serving just over three years in the
> League's top volunteer position. Wilson's legacy includes a near lifelong
> involvement in the League's emergency and public service communications
> programs. He remains active in public service and emergency communication,
> and he continues his League service as a Great Lakes Division Assistant
> Director.
>
> Honored with Hamvention 2004's top award--Amateur of the Year--is Dave
> Kopacz, KY1V/VP5X, of Hopkinsville, Kentucky. An ARRL member, Kopacz
> created and funded a program that gives young hams an opportunity each
> year to win an expenses-paid DXpedition trip to North Caicos Island.
>
> "The Awards Committee feels that it is this kind of support for young
> people that will assure the future of Amateur Radio," Hamvention's said in
> announcing the 2004 award winners.
>
> Kopacz developed the "Young Ham Contest Program" last year, and
> 14-year-old Daniel Bradke, W2AU, was the first DXpedition trip winner. As
> the selected applicant, Bradke operated as part of the VP5X Contest Group
> <http://www.vp5x.com> for the CQ World Wide CW contest last November. "I
> hope to get other hams involved in the program and eventually sponsor kids
> for every major contest," he said.
>
> Barry Sanderson, KB9VAK, of Indianapolis has been named as recipient of
> the Hamvention 2004 Technical Excellence Award. The Awards Committee
> selected Sanderson for developing a multi-channel, multiphase slow-scan
> television modulation scheme known as Redundant Digital File Transfer
> (RDFT), formerly known as HDSSTV.
>
> "Not only did Sanderson 'do the math,' but he also wrote the core software
> routines that allow RDFT to run on personal computers using sound card DSP
> capabilities," Hamvention said in its announcement. "This allows
> error-free transmission of computer files via standard Amateur Radio
> equipment." Sanderson has been a Hamvention forum presenter for the past
> three years.
>
> Hamvention 2004 is Friday through Sunday, May 14-16, at Hara Arena near
> Dayton, Ohio. Awards will be presented at a recognition program Saturday,
> May 15.
>
> ==>IOWA HAM CLUB DESIGNATED A "DAILY POINT OF LIGHT"
>
> The Points of Light Foundation & Volunteer Center National Network
> <http://www.pointsoflight.org> has designated The Tri-State Amateur Radio
> Club (TSARC) <http://www.qsl.net/w0cvj/> of Cresco, Iowa, as the Daily
> Point of Light for Monday, March 29. The Foundation recognized the
> ARRL-affiliated club for voluntarily providing communication during
> emergencies and for supporting Red Cross and The Salvation Army relief

> efforts. President George W. Bush and former President George H. W. Bush,
> have endorsed the Daily Points of Light Award, and each will send a
> congratulatory letter to the club.
>
> "Through your service you join the ranks of America's true unsung
> heroes--volunteers," said Points of Light Foundation President and CEO Bob
> Goodwin. "The spirit and energy of America's volunteers inspire us all,"
> he said. "Your work is a shining example of this spirit."
>
> TSARC's designation as a Daily Point of Light did not escape the notice of
> ABC Radio Networks' commentator Paul Harvey <http://www.paulharvey.com>,
> who mentioned it during his noontime broadcast on March 12. Harvey said
> the nation still relies on Amateur Radio operators to get the message
> through in an emergency or disaster.
>
> "For all of our sophisticated technology, in any real disaster, our
> country still relies heavily on its hams--Amateur Radio hobbyists," Harvey
> said in the approximately one-minute spot. Among citizen volunteers in the
> US, he concluded, there are "none more unsung and certainly none more
> unpaid, than the hams--standing by around the clock."
>
> TSARC's Ernie Martin, WA0AUU, said it marked the first Point of Light
> Award to an Amateur Radio club. TSARC serves as a Community Emergency
> Response Team (CERT) <http://www.citizencorps.gov/programs/cert.shtm>--a
> Citizen Corps program. A small club with just over a dozen members, TSARC
> still has managed to equip itself with two mobile emergency communication
> units and even a couple of parasail units--used in search-and-rescue work.
>
> While the club is in Iowa, its "tri-state" label derives from the fact
> that it serves parts of Minnesota and Wisconsin as well. The TSARC
> communications van--which the club resurrected from an aged auto junkyard
> candidate--contains equipment for both Amateur Radio and public safety
> frequencies. The unit can even beam a UHF Amateur TV signal from a
> disaster scene to a remote post--giving incident command personnel a
> firsthand look at what's happening.
>
> In 2002, TSARC was the beneficiary of a $1500 ARRL Foundation
> <http://www.arrl.org/arrlf> grant to assist its emergency communication
> efforts. The money helped to supplement the club's own fund-raising
> efforts toward covering the approximately $6500 cost of a 16-foot
> equipment trailer. Martin says TSARC's communications trailer is packed
> with everything the participating amateurs will need when they get to a
> disaster site. "We take everything five people will need for five days,"
> he said.
>
> The Daily Point of Light Award is given by The Points of Light Foundation
> & Volunteer Center National Network in partnership with the Knights of
> Columbus and the Corporation for National and Community Service (CNCS)
> <http://www.cns.gov/>, which currently subsidizes ARRL Amateur Radio
> Emergency Communications course <http://www.arrl.org/cce> training. The

> Award honors individuals and organizations "who have made a commitment to
> connect Americans through service to help meet critical needs in their
> communities and in the nation."
>
> ==>RESEARCHERS RESCUED FROM ICY OUTPOST, SITE OF R0PA
>
> A dozen Russian scientists were rescued March 6 from an Arctic research
> station near the North Pole that was nearly destroyed by what's being
> described as "a freak wall of ice." The North Pole Drifting Station SP-32
> had been the site of the R0PA Amateur Radio operation.
>
> Russian news media said helicopter teams facing frigid sub-zero conditions
> managed to reach the stranded researchers and saved all 12 explorers and
> two dogs. Hams around the world have reported working R0PA, for which
> DL5EBE is listed as QSL manager. The station's researchers reportedly were
> unharmed after being forced to huddle for three days in the remains of the
> outpost, some 450 miles from the nearest solid ground.
>
> According to Russian TV reports, a wall of ice pushed up from the
> surrounding ice floe March 3. Little now remains of the scientific and
> educational facility, set up last April by the non-profit Center Pole
> organization with support from the Russian government and the Russian
> Academy of Sciences. It had been expected to remain in operation for
> several years.
>
> Information on SP-32 is available on the Polus Arctic and Antarctic
> Expedition Centre Web site
> <http://www.polus.org/cgi-bin/sborka.cgi?name=sp2003>.
>
> ==>LESLIE A. MOXON, G6XN, SK
>
> Leslie A. "Les" Moxon, G6XN, of Surrey, England, died March 3. He was 95
> and among the oldest Amateur Radio operators in the UK. Licensed in 1928,
> Moxon was well-known among the amateur community for his writings on
> antennas, in particular his 1982 book HF Antennas for All Locations, now
> in its second edition. ARRL antenna specialist Dean Straw, N6BV, called
> Moxon a "radio pioneer" and said he'd been a fan of his work for years.
>
> "His insights into the effects of terrain were one of the factors that got
> me interested years ago in this aspect of HF radio work," Straw said.
> During World War II Moxon was involved in top-secret work to develop
> radar. He worked for the government as a radio specialist after the war,
> retiring in 1969.
>
> ARRL CEO David Sumner, K1ZZ, said Moxon's book "set the standard for
> practical antenna books and remains a classic."
>
> Moxon's son, David, recalls that his father's gardens grew antennas the
> way others grew plants and shrubs, and a new antenna design was always
> taking shape. "He always liked to live on the top of a hill--good for

> propagation of radio waves," he said. "And when moving to their final
> house in Hindhead, real estate agents were bemused to be asked about 'the
> long path to Australia.'"
>
> Moxon authored a July 1952 QST article, "Two-Element Driven Arrays."
> Several other of his articles appeared during the 1970s and 1980s in Ham
> Radio magazine. "A 6 Meter Moxon Antenna" by Allen Baker, KG4JJH, is among
> the antenna articles featured in April 2004 QST.
>
> In later years, Moxon developed an interest in theology, and he was not
> active on the air in the months prior to his death. A service was held
> March 10. Survivors include his wife Nancy and his son.
>
> ==>SOLAR UPDATE
>
> Ra the Sun god Tad "Sunny Boy" Cook, K7RA, Seattle, Washington, reports:
> Average daily sunspot numbers rose nearly 13 points March 11-17 to 66.1.
> Average daily solar flux rose by a negligible amount from 106.3 to 106.8.
> A solar wind stream caused geomagnetic disturbance from the last reporting
> week into the early part of this week, but conditions quieted. Mildly
> unsettled conditions may return over the weekend, with Friday through
> Monday, March 19-22, planetary A index predicted at 8, 12, 15 and 10.
> Solar flux is expected to moderately peak this weekend around 120 on both
> March 19 and 20, then 115 and 110 on March 21 and 22.
>
> Remember that huge solar flare that occurred last November 4? Estimated at
> the time as an X28 flare, it now appears to have been more than twice as
> large as the previous record and has been adjusted upward to X45. See the
> report "Sun's massive explosion updated" on the BBC News Word Edition Web
> site <http://tinyurl.com/22tpk>.
>
> Sunspot numbers for March 11 through 17 were 67, 71, 61, 61, 49, 53 and
> 101, with a mean of 66.1. The 10.7 cm flux was 113.2, 107.5, 103.8, 102.5,
> 101.4, 109.6 and 109.8, with a mean of 106.8. Estimated planetary A
> indices were 26, 23, 15, 16, 13, 8 and 6, with a mean of 15.3.
>
> _____
>
> ==>IN BRIEF:
>
> * This weekend on the radio: The RSGB 80 Meter Club Championship (SSB) is
> March 18. The Virginia QSO Party, the 10-10 International Mobile Contest,
> the BARTG Spring RTTY Contest, the SARL VHF/UHF Contest, the Russian DX
> Contest, the AGCW VHF/UHF Contest, the CLARA and Family HF Contest, the
> UBA Spring Contest (6 M), the 9K 15-Meter Contest, the Spring QRP
> Homebrewer Sprint are the weekend of March 20-21. JUST AHEAD: The CQ World
> Wide WPX Contest (SSB), the Spring Break RTTY Sprint. and the UBA Spring
> Contest (2 meters) are the weekend of March 27-28. See the ARRL Contest
> Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest
> Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

>
> * ARRL Certification and Continuing Education course registration:
> Registration for the ARRL VHF/UHF--Beyond the Repeater (EC-008) and HF
> Digital Communication (EC-005) courses remains open through Sunday, March
> 21. Classes begin Tuesday March 30. Registration for the ARRL Radio
> Frequency Interference (EC-006), Antenna Design and Construction (EC-009)
> and the Technician Class for Ham Radio Licensing (EC-010) courses is open
> through Sunday, March 28. Classes begin Tuesday April 6. Students taking
> Radio Frequency Interference (EC-006) will learn how to identify and take
> steps to cure various kinds of interference. Antenna Design and
> Construction (EC-009) covers basic antenna theory and practical
> construction techniques. With the assistance of a mentor students in the
> Technician Licensing course will learn everything they need to learn to

> * Bogus ARRL.net messages still circulating: E-mail messages purporting to
> be from the ARRL E-Mail Forwarding Service
> <http://www.arrl.org/members-only/emailfwd.html>, "The ARRL.net team" or
> some variation continue to show up in members' inboxes. The messages,
> which often carry a subject line along the lines of "Warning about your
> e-mail account," indicate that the recipient's ARRL E-Mail Forwarding
> Service <call sign>@... address will be closed within three days
> because of an alleged violation of acceptable practices. These messages
> are false and did not come from The ARRL Forwarding Service. They are the
> result of one of the variants on a number of viruses now permeating the
> Internet. A file usually is attached to these messages. As always, do not
> open any attachments that you cannot identify. Opening the file could
> result in your computer being infected by a virus. This is only one of the
> several virus-laden messages currently propagating across the Internet.
> The ARRL advises its members to be cautious in opening any message and/or
> attachment, even if it appears to be from someone you know. All of these
> viruses use e-mail addresses from the address book of an infected computer
> to falsify the "From:" address in the header to make it appear that the
> message is from someone the recipient knows.
>
> * FCC proposes to correct VEC filing errors: The FCC plans to correct
> inadvertent filing errors on the part of Volunteer Examiner Coordinators
> (VECs). In a Memorandum Opinion and Order (MO&O) released March 4, the FCC
> said it would reinstate the former call sign of Clifford S. Zipnick of
> Boynton Beach, Florida. A Technician class operator, Zipnick now holds
> KI4BSJ, a call sign issued in response to an application filed via the
> ARRL-VEC that erroneously asked the FCC to assign Zipnick the next
> available sequential call sign. Zipnick says he only wanted to modify his
> mailing address, not request a new call sign. The FCC has proposed to
> modify Zipnick's license to reflect his original call sign, KE4FGA. In
> another MO&O released March 4, the FCC has proposed modifying the license
> of Robert W. Rhodes, KG4RTN, of Hixson, Tennessee, from General to

> Technician class. Following a volunteer examination session in which
> Rhodes was an examinee, the Western Carolina Amateur Radio Society VEC
> (WCARS VEC) inadvertently filed an application indicating that Rhodes had
> qualified for General. It later realized that Rhodes had passed Element 3,
> the written exam, but not Element 1, the 5 WPM Morse code exam. WCARS VEC
> notified the FCC of the error. Unless Rhodes protests within 30 days, the
> FCC said it will issue a modification order to return his license to
> Technician class. The FCC blamed the situation on "an error made in
> reviewing the license examination data," and not on any wrongdoing by
> Rhodes.

From: ULHAS
Topic: 1604 Message: 1604

Hello,
As per e-mail re HAMFEST 2004 meeting, I went to qth Bengalee Girls school today. Unfortuntely, due to a derailment at Churchgate, I was delayed & could reach the venue by 10.25AM only. I tried to call up regarding the delay to Nilesh, but his cell was not reachable.

On reaching Bengalee High School, I was told that the convener has come & left as the expected people had not reached in time.

I am at a loss, to say the least.

For conducting the event like HAMFEST is visualised, a massive effort & coordination & cooperation is needed from all of us.

I feel MARS required a serious introspection of all issues cropping up in the recent past.

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

The time has come for me to say 73 to MARS, after almost 4 years of efforts I have to accept defeat... It is obvious that I am a MISFIT in our society.

The other day I was traveling by train from Thane in II class compartment, I noticed one gentleman constantly staring at me, finally I smiled at him and immediately he said "Sir, you are in the wrong compartment", my immediate reply without thinking was " Wrong compartment ? I am in the wrong country...!!

We Indians don't value our time, and definitely not the time of the others, here we have priorities and do things with convenience and NOT with commitment.. Commitment in other words, means Sacrifice.. which many of us don't know the meaning of.

I remember Dr. Mital (psychiatrist) (VU2TAL), during their Morse exam, he suggested a strategy, He said let all the students mug up and write the same passage, no matter what the examiner is transmitting. We then can challenge them that no, we all copied the passage correctly and the examiner is wrong. How can the whole class be wrong. The students did not use this for the exam, but they have pulled it off in real life.

I am now somehow convinenced that I am wrong, how can the whole society be wrong ?, Its only logical that the fault is at my end. may be my watch is wrong how can the whole society be late for the meeting ?

In my tenure as the secretary for MARS, I have tried my level best to change things for good, I am told that I am not a good leader but a Task Master.. Which ofcourse I totally agree..but what I missed out was , you can somone's habit NOT their nature.. you can't make horses out of Donkeys.. I have tried carrot and I have tried the whip, The carrot does not work and the whip definitely does not...

It is quite obvious that I am totally on a different wavelength that the rest of the members, therefore the communications is quite impossible.. sometimes it works when we do crossband operations, but most of the time it is simply not possible.. The only members who can really communicate with me is VU2ZRS, who can understand my QSO. for rest of the guys I guess it is morse code junk...

It took me almost 4 years to realise that I making your life and my life miserable... It is therefore best that I backoff and disappear. Thankfully my term as the secretary ends on 31.03.2004 in about 9 day..

The next secretary may please take over as the convener of the Hamfest 2004 by MARS..

73,

NLF, signing off..

Mumbai Amateur Radio Society

Dear Friends,

The time has come for me to say 73 to MARS, after almost 4 years of efforts I have to accept defeat... It is obvious that I am a MISFIT in our society.

The other day I was traveling by train from Thane in II class compartment, I noticed one gentleman constantly staring at me, finally I smiled at him and immediately he said "Sir, you are in the wrong compartment", my immediate reply without thinking was " Wrong compartment ? I am in the wrong country...!!

We Indians don't value our time, and definitely not the time of the others, here we have priorities and do things with convenience and NOT with commitment.. Commitment in other words, means Sacrifice.. which many of us don't know the meaning of.

I remember Dr. Mital (psychiatrist) (VU2TAL), during their Morse exam, he suggested a strategy, He said let all the students mug up and write the same passage, no matter what the examiner is transmitting. We then can challenge them that no, we all copied the passage correctly and the examiner is wrong. How can the whole class be wrong. The students did not use this for the exam, but they have pulled it off in real life.

I am now somehow convinenced that I am wrong, how can the whole society be wrong ?, Its only logical that the fault is at my end. may be my watch is wrong how can the whole society be late for the meeting ? I have tried closing the door of the class room, members have waited outside like idiots, but in vein.. no effect what so ever, I have given enough electrical shocks to bring life back, but I guess Mumbai is a dead city, It will take God to do the miracle.

In my tenure as the secretary for MARS, I have tried my level best to change things for good, I am told that I am not a good leader but a Task Master.. Which ofcourse I totally agree..but what I missed out was , you can change somone's habit NOT their nature.. you can't make Horses out of Donkeys.. I have tried carrot and I have tried the whip, The carrot does not work and the whip definitely does not...

It is quite obvious that I am totally on a different wavelength that the rest of the members, therefore the communications is quite impossible.. sometimes it works when we do crossband operations, but most of the time it is simply not possible.. The only members who can really communicate with me is VU2ZRS, who can understand my QSO. for rest of the guys I guess it is morse code junk...

It took me almost 4 years to realise that I making your life and my life miserable... It is therefore best that I backoff and disappear. Thankfully my term as the secretary ends on 31.03.2004 in about 9 day..

I have received many many phone calls from Pune, delhi etc.. congratulating on sucess of VHF repeaters project, our neighbouring city appreciates, because they don't have one, and they are looking forward to Matheran repeater.. Unfortunately our members don't.. I have mentioned earlier that the repeater at my QTH is temperory and it needs to be shifted to the building next to mine which is 48 storey, (Shripati Arcade), but nothing has happend so far about it..

In any case I am shutting down the repeater project with immediate effect.. for as our Treasurer point out, even the South Mumbai repeater is under utilized, what is the sense in having so many repeaters when there is no activity..

MARS has taken up to host the hamfest 2004 in Mumbai, in the last 4 months there is absolutely no progess, we have just about 8 and half months to go... even the Venue is not fixed as yet.. We were hoping to have it at I.I.T Powai, but after 4 months the the director of I.I.T has turned us down.. So we are back to square one..

The next secretary may please take over as the convener of the Hamfest 2004 by MARS..

73,

NLF, signing off..

All mode handheld receiver 0,15 ~ 3304,999MHz

Mod. Icom IC-R20 #02

Code 5-723-805

? 553,54 (+ VAT)

Icom IC-R20
ALL MODE HANDHELD RECEIVER
0.15 - 3304.999 MHz

- Wide receive range: 0.15~3304.9999MHz
- Modes: SSB/CW/AM/FM/WFM
- Dual watch capability in specific bands
The receiver has band A and B. Dual watch is possible between band A and B.
However, dual watch is not possible within band A or B.
- IC audio recorder built-in with selectable recording time
Recording times of 1 hour/2 hours and 4 hours are selectable. Please note that playback audio quality of the recorded contents is reduced as the recording time is extended.
- Auto squelch function
- 1250 memory channels: 1000 memory, 25 scan edge, 200 auto-write scan (Max. 100 channels x 18 banks)
- CTCSS/DTCS/DTMF decode
- Large backlit dot-matrix LCD for clear viewing of display contents
Max. 8 characters can be programmed for channel names
- Internal bar antenna allows MF band reception without antenna. Similar telescopic rod type antenna as IC-R3 (BNC connector)
- Li-ion battery pack standard (BP-206)
- Optional swivel belt clip MB-87
- Voice Scan Control (VSC)
- Attenuator and RF gain control functions
- Noise blanker and Automatic Noise Limiter functions
- Multiple scan functions: 30Ch/sec high speed scan capability in VFO mode
- CI-V PC control capability

12V 1500W DC to AC power inverter

Mod. Lafayette i12-150A

Code 5-740-473

? 267,09 (+ VAT)

Lafayette i12-150
12V 1500W DC TO AC
POWER INVERTER

The power inverter series are the member of the most advanced line of mobile AC power system available.
This model is used in a wide range of application including remote homes, RVS, sail boats and power boats.

It will operate most television and VTR's, personal computers, small appliances and tools such as drills, sanders, grinders, mixers and blenders.
To get the most out of the power inverter, it must be installed and used properly.

CONTROLS AND INDICATORS
The ON/OFF switch turns the control circuit in the power inverter on and off. It does not disconnetted power from the power inverter.

BATTERY VOLTAGE INDICATOR
The battery voltage bar graph indicates the voltage at the input terminals of the power inverter.

BATTERY CURRENT INDICATOR
The battery current bar graph indicates the current drawn from the battery by the power inverter. It will not indicate current by others loads also connected to the battery.

OVERTEMP INDICATOR
The overtemp indicator indicates that the power inverter has shut itself down because it has become overheated.

SPECIFICATIONS

DC input voltage:

12V (10-15V)

AC output voltage:

230V

Output frequency:

50 Hz

Output wave form:

modified sinewave

Continuous output power:

1500W

Surge power capacity:

2500W

Efficiency:

85-90%

No load current:

600 mA

Battery low alarm:

DC 10.7V ?0.5V

Battery low shutdown:

DC 10V ?0.5V

Alarm and thermal shutdown:

55?C ?0.5?C

Overload protection:

YES

Short-circuit protection:

YES

Dimensions (L x W x H):

430 x 240 x 77 mm

Net weight:

3.8 kg.

Handheld HF antenna for IC-703

Mod. Icom AH-703

Code 5-751-002

? 182,40 (+ VAT)

Icom AH-703
HF ANTENNA

HF mobile antenna, whip type, handheld configuration.

-
Frequency range:
7/14/21/28/50 MHz

- Antenna type: 1/4 wave whip antenna
- Input power:
max. 20W (SSB)
- Length: 139 cm
- Coil lenght: 60 cm
- Weight: 0.33 Kg.
- Connector: PL-259

Compatible with:

-
IC-703 (http://www.marcucci.it/english/prodotti/modelli.asp?ID=9629)

144 MHz FM transceiver 65W

Mod. Icom IC-2200H #12

Code 5-723-435

? 256,93 (+ VAT)

ICOM IC-2200H #12
144 MHz FM TRANSCEIVER

- Stable 65W of output power for wide range, and wide receive range of 118-174MHz. Output power selectable in 4 levels
- 65W output power is guaranteed within Amateur bands only
- Total 207 memory channels separable into 10 banks (200 regular Ch., 6 scan edge Ch., 1 call Ch.)

- Multiple scanning modes (Full/Program/Memory Ch/Bank/Skip/Tone)
- Optional voice scrambler and DTMF decoder
(UT-108, UT-109, UT-110. Use in analog mode only)
- New rounded design, similar size as IC-2100H
- Optional digital voice/data modulation units
The IC-2200H becomes a dual mode (FM analog/Digital) transceiver when installed
- UT-114: Digital V + D modulation unit with voice scrambler for commercial use
The UT-114 has a digital voice encryption feature for use in important communications preventing unwanted stations from listening in.
- Connection to a PC via the data terminal is required for digital data communication. (RS-232C based serial data). Data transfer rate is about 2kbps
- Squelch attenuator and squelch delay function
- CTCSS/DTCS encoder/decoder standard with CTCSS/DTCS decode scan function built-in
- 50 CTCSS repeater access tones and 50 tone squelch frequencies can be independently set
- PC to transceiver cloning and transceiver to transceiver cloning capability
- Ultra-tough compact aluminum body withstands harsh shock and vibration, while possessing superior heat dissipating capability
- Large clear backlit LCD
6-character, 14-segment alphanumeric channel comment can be programmed
Backlight LED color switchable amber/green

Specifications

144 MHz FM transceiver 65W

GENERAL

Frequency coverage:

144 ~ 146 MHz

Mode:

FM

Operating temperature:

-10? to +60?C

Tuning step increments:

5/10/12.5/15/20/25/30/50 kHz

Frequency stability:

+/- 10ppm (-10?C ~ +60?C)

Antenna impedance:

50 Ohm

Memory channels:

207 Channels (Incl. 200 regular, 6 scan edges, 1 call)

Scan mode:

Full/Program/Priority/Memory Channel/ Bank /Skip/Tone

Power supply:

13.8VDC ?15% (negative ground)

Current drain (at 13.8Vcc):

TX:

15.0 A a 65W

RX:

Standby

0.8A

Max. audio

1.0A

Dimensions:

140 (W) x 40 (H) x 145.9 (D) mm.

Weight:

1.2 kg.

TRANSMITTER

Output power:

65W - 25W - 10W - 5W

Modulation system:

variable reactance frequency modulation

Max. frequency deviation:

? 2.5 kHz

Spurious emissions:

less than -60 dB

Microphone connector:

8-pin modular jack (600 Ohm)

RECEIVER

Receive system:

double convertion superheterodyne

Intermediate frequencies:

1^

21.70 MHz

2^

450 kHz

Sensitivity:

less than 0.18?V (12 dB SINAD)

Selectivity:

more than 6 kHz a -6 dB
less than 14 kHz a -60 dB

Spurious and image reiection:

more than 60 dB

Intermodulation reiection ratio:

more than 70 dB

Audio output:

more than 2.4W on 8 Ohm load (10% d.a.t.)

140 (W) x 40 (H) x 145.9 (D) mm.

Weight:

1.2 kg.

TRANSMITTER

Output power:

65W - 25W - 10W - 5W

Modulation system:

variable reactance frequency modulation

Max. frequency deviation:

? 2.5 kHz

Spurious emissions:

less than -60 dB

Microphone connector:

8-pin modular jack (600 Ohm)

RECEIVER

Receive system:

double convertion superheterodyne

Intermediate frequencies:

1^

21.70 MHz

2^

450 kHz

Sensitivity:

less than 0.18?V (12 dB SINAD)

Selectivity:

more than 6 kHz a -6 dB
less than 14 kHz a -60 dB

Spurious and image reiection:

more than 60 dB

Intermodulation reiection ratio:

more than 70 dB

Audio output:

more than 2.4W on 8 Ohm load (10% d.a.t.)

Miracle Whip
Order #3256
List Price: $139.95
Your Price: $129.95
(http://secure.universal-radio.com/checkout/add2cart.asp?id=3256)
(http://www.universal-radio.com/catalog/hamantht.html)

Amateur HT & Portable Antennas

Interior View (http://www.universal-radio.com/catalog/hamantht/3256int.html)
The Miracle Whip lets you operate your new QRP HF/VHF/UHF portable transceiver with real freedom! The Miracle Whip is a completely self-contained, all-band 50-inch telescoping whip antenna with integrated tuner for receiving and transmitting that mounts right on your radio. The Miracle Whip liberates your rig from coax, cables, mounts, tripods and trees, and gives you remarkable DX performance from desktop to picnic table, with no ground required. Now that's portable! Imagine - finally you can take your go-anywhere rig anywhere you go - the backyard, camping, hiking, traveling on business or vacation, or over to a friend's - and operate with total freedom. The Miracle Whip means you're on the air instantly, and working HF and V/UHF anywhere, anytime. A perfect marriage with the Yaesu FT-817 (http://www.universal-radio.com/catalog/hamhf/1817.html). The Miracle Whip is a truly unique design that enables you to transmit and receive all the way from 3.5 to 450 MHz. On HF, the integrated tuner will generally provide an excellent match (better than 2:1) and permit loading the antenna perfectly. On VHF, the antenna may be tuned by fine tuning the whip length in conjunction with the tuner. You can operate the Miracle Whip in different modes on VHF and UHF, such as 1/4 wave, 5/8, 3/4 or even 11/4 wavelengths, depending on frequency. This makes the Miracle Whip the only HF antenna that not only operates VHF and UHF, but does it with gain!
The Miracle Whip doesn't really perform miracles, but its performance is truly remarkable. You can work a DX SSB or CW station overseas on 10, 15 or 20, check in to the local forty-meter swap net, scoot up to two meters or 440 for an autopatch or a chat with the boys, check six for openings, catch the last bit of the football game on MW, and wrap up the evening with the BBC World News - all with the same, super-portable antenna.
The Miracle Whip is perfect for any shack and any rig - for emergencies, testing, field days, cottage, camping, canoeing, fishing - the list goes on. Wherever your big antenna won't go, a Miracle Whip puts you on the air.
It's a superb SWL and scanning antenna too. Miracle Antenna's C-VAT tuning does a spectacular job on reception. Far more selective and noise-free than any active antenna, the Miracle Whip provides a tuned impedance match to your receiver's front end. The results from a four-foot whip are eye-popping.
When you want to go portable, there's no other antenna that does so much, and is so convenient. Get a Miracle Whip and get on the air - from there - today! Please remember to limit your output power to 10 watts CW, 20 watts SSB PEP. The Miracle Whip (when collapsed) measures about 13 inches tall, and can be folded into a corner with the largest dimension being about 11 inch (the whip). It weighs around 9 oz. Manufactured and warranteed (3 years

limited) by Miracle Antenna of Montreal, Canada. (This is the MarkII Version with the black whip). Click here to learn why the Miracle Whip works as good as gold (http://www.universal-radio.com/catalog/hamantht/3256int.html).

(http://www.universal-radio.com/index.html)
RatTail HT
Antenna Booster
Order #2714
Your Price: $29.95
(http://secure.universal-radio.com/checkout/add2cart.asp?id=2714)
(http://www.universal-radio.com/catalog/hamantht.html)

Amateur HT Antenna Booster

The RatTail Antenna Booster is a patented technology. This passive device attaches to a handheld radio operating in the Marine, Aircraft or 2M Ham Radio bands. An increase in transmitted energy of 9 to 12dB (800% - 1600%) is seen when measured at a distance of 1.2 miles (2 km) or more. This increase results from a transformation of your radio's 1/4 wave vertical antenna to a 1/2 wave dipole antenna. Thus more energy is delivered to the horizon. This makes it very useful for emergency rescue operations where rescue workers are having difficulty getting their message through to a base station. Boaters will double their range from a small craft to land. This device only works on handheld radios. A 5 watt handheld radio becomes effectively like a 20 or 40 watt radio, thus increasing its ability to get a signal through. Received sensitivity is also increased by the same amount.
Velcro on the back of the device allows attachment to many places on the radio. There is an optimal place to mount the RatTail on each design of radio to get the maximum increase in efficiency. How it works is simple. The LED in the eye of the rat glows red when you find the right place to mount it on your radio. It then turns your 1/4 wave vertical rubber resistor into one element of an efficient 1/2 wave dipole. The RatTail has a built-in red light in the eye of the rat. Transmitting while moving the plate around to various locations near the bottom of the radio causes the eye to glow brightest when the best mounting spot is found. The device can be mounted anywhere that is convenient, provided that the light glows brightly when you transmit. The glowing eye is essential when initially mounting the device and has no usefulness beyond selecting the mounting location. Velcro can be used for mounting securely after doing careful testing, or the RatTail can temporarily be slipped under the belt clip. It can be rolled up and kept in the pocket when not needed, but some users prefer the velcro approach and always leave the tail attached to the radio.
Transmit enhancement is typically about 800% as measured at 1.2 miles (2 km) with a second radio. The radiation pattern from a handheld radio is not normally horizontal, so much energy is lost to the sky. The RatTail lowers the radiation pattern to make it almost horizontal so that much more energy is delivered to the distant radio. When measured across the room a measurement of the power increase will not be as high as that but about 400%. Reception sensitivity is increased by 400% to 800% to help pull in signals from distant radios.
In addition to boosting the antenna power output it also matches the antenna more closely to the radio. The result is lower battery consumption on some radios on high power. Also since it is possible to use lower power settings, all radios will benefit from this by extending their operating time. This feature allows emergency operations to be carried out

for longer periods without the need to stop for battery maintenance.
On a Dual Band ham radio the stock antenna is a compromise antenna that has about a 12dB loss as compared to a proper 2m rubber antenna. The RatTail typically restores the dual band's 2M efficiency to that of a full 1/4 wave vertical. In all the dual band radios we tested there was an astonishing 18db improvement on 2M. This represents a 16 times or 1600% improvement. For the first time Dual band operation on both 2M and 70cm can be equally efficient without the need to change antennas.
Because the Rattail Antenna Booster attaches to the bottom of the radio (http://www.universal-radio.com/catalog/hamantht/ratbot.jpg), unlike other devices that connect to the BNC connector, the RatTail cannot damage the antenna or BNC mounting. If it gets pulled it simply pops off the radio without doing any harm. Made in Canada.

1619. Meeting on 28th March 2004, Sunday

Yahoo group: m_a_r_s
Date: 2004-03-25 05:40:36 UTC
From: Shantanu Chand
Topic: 1619 Message: 1619

Dear All,

On behalf of VU2IZO, Milind Korde, I am pleased to inform you that there will be a meeting as follows:

Date: 28th March 2004, Sunday

Time: 1015 hrs(ie 10:15 am IST, 0445hrs Zulu)

Venue: Bengalle Girls School, Churchgate near USIS.

Agenda:

1. To call the meeting in order

2. Points to be discussed for the Annual General Meeting to be held on 1st May 2004

3. Discussion of HAMFEST 2004 to be held in Mumbai.

4. Any other matter with the permission of the chair.

All Managing Committee members are requested to be present. Also all members are requested to attend and be in their seats by 10:15 am latest.

for those members who have difficulty in finding the QTH, you may refer to http://www.cse.iitb.ac.in/navigator/servlet/BrowseRoutes_S regarding bus routes and train routes to Churchgate(Closest bus stop and station).

Active radio frequency of the day will 144.200 Mhz

All are requested to attend.

73

Shantanu Chand
on behalf of VU2IZO

38. Mukesh Jaitley VU2UGJ

Minutes of the Meeting held at Bengalle Girls School Churchgate on
28th March 2004

1. VU2IZO, OM Milind Korde, handed over charge of the meeting to VU2CBU, OM Prashant Koli
2. VU2ICQ, VU2KIZ and VU2CDP were granted leave after receiving their emails for grant of leave.
3. The Meeting was called to order at 10:30 am (IST) with Committee Members VU2CBU, VU2UGJ and VU3AUA on the dais and 35 other members of MARS.
4. The floor was open to the house and the following points were noted:-

a. Call for any meeting should be made at least one week in advance so as to enable the members to alter and change their previous engagements if necessary.
b. It was decided to do away with the door closing system as MARS is a hobby club and members are free and not bound by rules and regulations. Members would try to come on time, but if late would not be kept out.
c. If there is no quorum at the appointed time, then the meeting would be postponed by half and hour and if even after that there is no quorum the meeting should begin with who so ever is present.
5. HAMFEST 2004:
a. OM VU2IZO said that OMVU2NLF, OM VU2TAL, OM VU2IZO and VU2TAL's father would visit IIT on Thursday, 1st April 2004, and hold a meeting with the Deputy Director and the Dean with regards to the HAMFEST Venue.
b. OM VU2ZRS inquired whether any member knew any catering companies and could kindly hand over their contact details for him to enable him to get quotes for the HAMFEST Food and Beverage department.
c. SWL Shantanu Chand mentioned that the domain hamfest2004.org was in the possession of MARS and that the Managing Committee of HAMFEST 2004 was waiting for the finalization of the venue to start work on the website.
d. Most members present were willing to give commitment for the success of HAMFEST 2004 to be held in Mumbai.
e. It was suggested that a alternative venue to IIT, Powai should also be sought in case of refusal of permission from them.
f. The final decision of the HAMFEST 2004 arrangements would be left to OM VU2NLF, convener of the event, after the MARS meeting with the IIT management.

6. Annual General Meeting:-
a. Venue most probably Garware Pavillion, Wankhede Stadium to be confirmed.
b. OM VU2UGJ explained the various criteria for standing for the Committee Election and voting. It was said that voting rights were given only to MARS members who have been members of the Society for at least one year and are current call sign holders. The same criteria were applicable for running of elections for the office bearers.
c. OM VU2CBU, Treasurer of MARS, submitted that the accounts of

society were almost ready and would be submitted to the Chartered Accountant soon. If all accounts from all members concerned could be submitted soon then the accounts would be passed on to the Chartered Accountant.
7. SWL Shantanu Chand on behalf of SWL's, who are life members, sought a clarification about caps and T-Shirts to be issued to them. A clear cut clarification is still to be given as to what is the status of the same and what is the standing of the Life members who registered for the HAMFEST 2003 and did not receive caps and T-shirt.
8. OM VU2IZO mentioned that the Life Membership fee would be most likely being increased to Rupees five thousand. A decision on this would be taken at the AGM
9. OM VU2IZO stated that the next batch of HAM Radio Classes would be held in Thane sometime in June.
10. OM VU2OZO mentioned that there would be a training course held at Murud at a farm house for learning how to operate rigs. Only 15 members would be allowed on first come first served basis.

Meeting was called to a close at 12:00 pm after the next meeting was announced on the second Sunday of April ie.11th April 2004

Dear HIT/SFN,

Thanx for the procedure.
is the procedure same if we need to import sets worth
above rs.10K ,if yes how much will be the duty and if
no then in that case do we have any other alternative
?

Regards
Mukesh

Rediff On The Net, Infotech: The N Vittal ColumnAugust 11, 1997

N Vittal

The HAM-handed miracle

India's on the brink of a revolution in telecommunications. I am sorry for using the clich? yet one more time. But that is because the full significance of the development has not yet sunk into India's collective consciousness. How will we run this technical revolution if we do not have the manpower? We need to inculcate a scientific temper in our youth so that they man the telecom-centric India of the next century. One way to do it would be to encourage amateur radio as a hobby.

Ask an average Indian what a HAM is and you will most likely be told about a Western dish, taboo to many Indians. You may also be told about being inexperienced as in 'ham-handed'. It will be rare to find somebody who talks about amateur radio buffs as in HAM operators.

These HAM operators are radio communication hobbyists and have known to be of immense help the world over in times of disaster when more conventional communication technology like telephones fail.

Though called amateur radio operators or HAMs, they are anything but ham-handed. Their expertise is legendary and has often led to breakthroughs in telecom technologies. The HAM acronym is often explained as the initials of three scientists who made significant contributions in the study of radio waves and telecommunication. They are Hertz, Armstrong and Marconi.

Many eminent people have been HAM enthusiasts. Former prime minister late Rajiv Gandhi was a HAM. Lord Mountbatten was another. The present king of Jordan is one more celebrity HAM.

I see a great potential in encouraging HAM activity as a means to seed India's telecom revolution. There are about 3.2 million HAM operators in the world. Of this nearly a million are in Japan. In India there are hardly 10,000. If we start HAM clubs in all the 75,000 high schools in India we will plant the seeds for a telecom revolution in the country.

This is because we will be creating a whole generation of scientific and technology minded youngsters who will play a significant role in the communication revolution of the next century.

You may ask that if after so many years India has only about 10,000 HAMs, how can we make the great leap forward of starting clubs in 75,000 schools? The answer is that we are not just capable of making such advances but have

done so in other fields. For instance, after 24 years of introducing television in the country, only 24 per cent of India was covered by broadcast. In 1984, with the help of low power transmitters and the government's decision to commission one low power transmitter per day we covered 78 per cent of the nation in less than a year.

The speed and the efficiency with which the Asiad infrastructure was set up in New Delhi is another example to demonstrate how, when a determined effort is made, positive results can be achieved.

India must not be left out of the telecom revolution which is sweeping the world. But there is a corollary to this compulsion: The building of a technology-minded manpower. And what can be a better way to achieve this if not the introduction of youths to HAM clubs.

To this end I have a strategy:

The first is to bring all HAMs under an umbrella organisation. Dr Kurien, who is credited with bringing about the country's milk revolution was asked when he went to Kerala, why he could not spark a similar revolution in his home state. Kurien's reply was laconic. "The problem in Kerala," he said, "is that there are too many Malayalis!" Perhaps the problem in India with so many intelligent people is that we have too many Indians!
On the HAM scene there is the National Institute of Amateur Radio in Hyderabad. It has managed to build assets worth Rs 100 million after receiving funds from the central and state governments. It has a building and the requisite infrastructure. We have other such clubs in Bombay, Delhi, Calcutta and elsewhere.

NIAR is also fortunate to have Member of Parliament Shrikant Jichkar as a member. Perhaps NIAR could take the initiative to set up a umbrella organisation to catch all HAMs in the country.

The next step should be to popularise the idea. It can be done by asking the Department of Telecommunications to simplify legal formalities and procedures relating to licensing HAMs. The department advises the government on issues of wireless communication.

If an umbrella organisation of HAMS is formed, the government could even consider entrusting it the responsibility of issuing licences as has been done in countries like Japan.

In India anyone above 12 years of age can become a HAM by acquiring a licence issued by Wireless Planning and Coordination Wing of the ministry of communications. This licence is issued after the applicant passes a simple examination to test the practical knowledge of Morse code and the basic principles of radio communications.

Proficiency in amateur radio activity can be acquired by qualifying in various grades of examination to become HAM operators. The application for an 'amateur station operator' examination for various grades along with the required examination fee needs to be submitted to the nearest officer in

charge of 'monitoring stations', Wireless Planning and Coordination Wing. The syllabus for the examination covers knowledge of Morse code, radio regulations and radio theory. A written test is conducted on these subjects. Practical knowledge of Morse transmission and reception is tested at a speed of five words per minute for grade II and 12 words per minute per minute for grade I licences. The authority for conducting the examination is the 'officer-in-charge', wireless monitoring station. In New Delhi, the examination is conducted by the engineer-in-charge, Monitoring Organisation, Pushpa Bhawan, New Delhi-110 062.
The fee for grade I and II examinations is Rs 20 and Rs 10 respectively.

Yet the most important thing to do is to spread the message of HAM and begin club activity in 75,000 high schools across the country. This will call for resources both financial and physical.

On the financial side, the government has already approved under the Members of Parliament Local Area Development Scheme, a plan for starting HAM clubs in schools.

Shrikant Jichkar has started one in his erstwhile constituency of Nagpur. If every MP were to accept this idea, the problem of finance would be overcome. Initially, every school or college would need to set up high-frequency HAM equipment at two locations, more than 30 km apart. An HF Single Side Band Transreceiver of 15/100 Watts power output with voice communication can be installed at these places for possible communication during emergencies among HAM operators.

More advanced HAM equipment in 'very high frequency', 'ultra high frequency' and 'satellite frequency' bands can also be introduced in a progressive manner.

Specifications of HF Transreceiver in 500 KHz-30 MHz band can be used for equipment procurement. To set up facilities for a HAM club, the schools or colleges would need a dust free room to accommodate equipment and operators. The room does not require air-conditioning. However, it should have an adequate 220 V AC power supply and furniture for training the students on Morse codes and radio procedure.

The clubs would also need the presence of a grade I licensed amateur radio operator who could officiate as the secretary. Provisions will also have to be made to take care of the recurring expenses for the maintenance and operation of the HAM equipment for one year after installation.

A pair of HAM stations can be installed by a suitable qualified agency or the manufacturer of the equipment. This involves installation of suitable power supply, feeder and antenna. Maintenance and repair must be planned. Advice of the manufacturer must be taken in this regard.

A qualified agency or person can provide services for getting licence for setting up of an amateur radio club on behalf of the school or college.

Here is an estimate of the expenses involved in the first phase of the project HF Transreceiver 15/100 Watt all mode 2 nos would be Rs 80,000; DC power supply 0-50 volts, 5 amps Rs 20,000; battery 70 AMPH 2 nos Rs 10,000; HF antenna yagi or log periodic 2 nos Rs 40,000; accessories like cable, connectors etc. 2 nos Rs 20,000. The technical specifications can be called for from manufacturers. Miscellaneous fixed assets like chairs and tables may cost Rs 30,000; installation Rs 20,000; training for two teachers Rs 100,000; contingency Rs 30,000 and recurring expenditure for two years Rs 50,000.

The total cost of the project should sum up to Rs 4 million.

Alternatively, HAM sets could be assembled from transreceiver kits available with several agencies like the NIAR, National Council for Science and Technology and the Department of Science and Technology.

The government also allows HAM equipment to be imported. HAM operators and clubs are eligible to import HAM equipment and accessories up to Rs 50,000 with concessions in duty. Some equipment can be bought from certain Japanese companies like Yaesu, ICOM and Kenwood.

The Department of Electronics can make arrangement for procurement of imported HF HAM radio equipment through the Software Technology Parks of India, Electronics Niketan, 6 CGO Complex, New Delhi. The STPI is an autonomous registered society under the Department of Electronics.

Equipment maintenance may be taken up by the authorised dealers of the area. In case no authorised dealer is available, the work can be given to the Electronic Test and Development Centre, Electronics Research and Development Centre or any other organisation of the Department of Electronics in that area.

In addition, as HAMs are crucial in disaster management, the ministry of agriculture and the state revenue departments could earmark funds for promoting HAM clubs in schools and colleges of at least those regions which are prone to natural calamities.

The government can also offer incentives to ensure that the corporate sector makes a contribution towards HAM clubs. I suggest certain tax concessions: Expenditure incurred in starting HAM clubs and then sustaining them can be made tax deductible and the investments made in the equipment needed for HAM clubs may be made eligible for 100 per cent depreciation in the first year itself. This would give rise to more leasing of HAM equipment.

That brings me to the next important input needed for launching a HAM revolution in the country, namely, the ready availability of HAM equipment. This is one opportunity for the corporate sector to get into the business of manufacturing the equipment. With the tax incentives and the resource mobilisation methods I have suggested, the market would be created automatically.

If we are able to launch a nationwide programme to promote HAMs in this golden year of our Independence we will be able to create in this country an

infrastructure by which at least a group of intelligent youngsters from every school will become prepared to cope with tomorrow. We would have laid the foundations for a telecom revolution.

ARRLWeb: The Amateur Radio Crossword PuzzlerThe Amateur Radio Crossword Puzzler

By H. Ward Silver, N0AX
January 31, 2004

"Worthy Components" -- Get out your resistor color code chart and see if you can track down the various parts of this puzzler!

Those little bits and pieces that make up so much of electronics are often taken for granted. This puzzle's theme is words associated with the various types of simple electronics components. How well do you know your little friends and neighbors?

Ward "Bits and Pieces" Silver, N0AX, authors--among numerous other things--the Amateur Radio Crossword Puzzler, which appears twice a month on the ARRL Web site. He can be reached by e-mail at n0ax@... or by surface mail at Aetherworks Publishing, 22916 107th Ave NW, Vashon, WA, 98070.

Across
3. Batteries with liquid electrolyte are ... cells
5. Prevent flow of ac current
9. Unit of inductance
10. Translate symbols into information
11. Old abbreviation for pico
12. Ferrites prevent this type of interference (abbr.)
13. This moves on a variable capacitor
15. Designates "6" on resistor band
18. Material of disc capacitors
20. Resistors cause voltage to do this
21. Adjustable resistor
22. Common abbreviation for "that is"
23. Mixer signal (abbr.)
25. Receiver frequency fine tune (abbr.)
26. Legitimate
27. Hit
30. Indefinite article
31. A good job is done "just ..."
32. Light (abbr.)
33. Unit of capacitance
37. Abbreviation for chip
38. One in a million (abbr.)

40. Printed value of a component
42. Makes mistakes
45. Input-Output (abbr.)
46. Lift or carry
48. Smallest state in the tenth district
50. Confuse
51. Electric vehicle (abbr.)
52. CW abbreviation for "and"
53. Power dissipating components
54. These designate numbers and exponents of component values

Down

By H. Ward Silver, N0AX
June 20, 2003

Units, Units Everywhere!

If the ministrations of the local meteorologist is keeping you under the weather, here's a good opportunity to meter your mastery of metrology instead. This quiz is full of units, their abbreviations, and combinations thereof. How do you measure up?

Ward Silver, N0AX, (aka The Metonymic Master of Meter) authors--among numerous other things--the Amateur Radio Crossword Puzzler, which appears twice a month on the ARRL Web site. He can be reached by e-mail at n0ax@... or by surface mail at Aetherworks Publishing, 22916 107th Ave NW, Vashon, WA, 98070.

Across

1. one-thousandth
4. transmitter (abbr.)
6. one-billionth
9. unit of reactive power
10. rush
11. 1 across times 12 across
12. unit of inductance
13. metal used in wires (chemical symbol)
17. units of light intensity
19. number of events per unit time
21. ambulance medical personnel
22. weight of one microliter of water
23. distance from bottom to top
24. prefix of Middle Eastern country

26. type of ac voltage measurement
28. prefix of neighbor to 25 across
30. bipolar junction materials
32. ac variation on power supply output
33. thread direction
34. unit of power
36. measure of impedance match
37. make a msitake
38. draw power from
40. prefix meaning all or every
42. OD minus twice wall thickness
44. unit of capacitance
47. a billion
49. units of weight
51. a speed that rhymes with race
52. not you
53. units of electromotive force
57. divide in two
58. units of current

Down

2. make longer
3. don't let this grow on your tower
4. attempt
5. not working properly
6. 6 across times 12 across
7. billionth of a meter
8. units of resistance
10. unidirectional current
12. unit of frequency
14. 360 of these in a circle
15. a million
16. measures with a moving needle
18. one-tenth of 56 down
20. type of engineer
25. resistance to ac current
27. earliest mode of transmission
29. 1 across squared squared
30. measure of acidity
31. unit of pressure
33. greek letter that moves your boat
34. how heavy an object is
35. slang for math of angles
39. audio frequency

> the world. Its exports are over $2 billion. India is among the top five bulk drug makers and at home, the local industry has edged out the MNCs
> whose share of 75% in the market is down to 35%. Trade of medicinal plants has crossed Rs 4,000 crore already. As for technology, India is among
> the three countries that have built supercomputers on their own. The other two are USA and Japan. Not a bad club to be in, is it?
> India is among six countries that launch satellites and do so even for Germany and Belgium. India's INSAT is among the world's largest domestic

> satellite communication systems.
> Here are more depressing facts. India is one of the world's largest diamond cutting and polishing centres. About 9 out of 10 stones sold anywhere in
> the world, pass through India. With China, India's arch enemy, trade has grown by 104% in the past year and in the first 5 months of 2003, India has
> amassed a surplus in trade close to half a million dollars. In the recession-hit West, Indian exports are up by 19% this year and the country's foreign
> exchange reserves stand at an all-time high of $82 (Now over 100) billion. India is dishing out aid to 11 countries, pre-paying their debt and loaned
> IMF $300 million!!
> And since we think banning fashion shows is the way ahead, it might be interesting to know that Wal-Mart sources $1 billion worth of goods from
> India - half its apparel, GAP about $600 million and Hilfiger $100 million.
> These success stories are not propaganda and haven't happened overnight or by good fortune. The Indians have the same bureaucracy and many of
> the politicians simply play politics, the infrastructure creaks andpoverty abounds, corruption flourishes and there are huge pockets of inefficiency and
> walls that block meaningful progress. Sure, it has an army that is not bursting with power-grabbing and subjugating its people every few years, but
> India's success can no longer be denied and the gap between us and them grows wider by, if I may use my childhood idiom,leaps and bounds. What
> makes them tick?
>
> The answers are not simple and require great space and analysis by minds far superior to that of a weekly hack, but Cost and Brains are two factors.
> Add to that, a determination to rise above what faces you everyday, a vision of the stars as the man said. India provides IT services at one-tenth the
> price. No wonder more and more companies are basing their operations in India. An Indian MBA costs $5,000. An American MBA $120,000.
> Development of an automobile in the US costs $1 billion. In India, less than half. A cataract operation costs $1500 in the US. In India, $12. Bypass
> in the US anywhere up to Rs 6 lakhs. In India, it is Rs 40,000.
> Over 70 MNCs have set up R&D facilities in India in the past five years. 100 of the Fortune 500 are now present in India vs 33 in China. Intel's
> Indian staff strength has gone up from 10 to 1,000 in four years. GE with a $60 million invested in India employs 1,600 researchers, while it has only
> 100 in China. With better systems comes efficiency. The turnaround time in Indian ports is down to 4 days from 10 and its telecom infrastructure in
> 1999 provided a bandwidth of 155 Mbps. Today, it is 75,000 times more and with fibre optic networks in 300 cities, it will change the face of
> business. Mobile phones are growing by about 1.5 million a month. Long distance rates are down by two-thirds in five years and by 80% for data
> transmission. The facts go on and on.
>
> So what are the answers? They lie in the way we look at things, our

discourse, our vision, our ability to look ahead and our desire to genuinely put
> our country on the right road. The people of the subcontinent are naturally talented and bright. When will we unleash the great potential of our people
> that lies dormant, crushed by the forces of evil that stop our progress for their personal agendas?
>

Now available in MARS Library!!

QST - MARCH'2004 Contents :-

TECHNICAL

Adventures with Indoor Antennas - Kim Stenson, W4KVS
Have attic space but no room for outdoor antennas? The author has some advice for you.
Limited Space and Indoor Antenna - http://www.arrl.org/tis/info/limited.html

Build a Puff-and-Sip Keyer - Gary Gordon, K6KV
This inventive take on sending Morse code is a device that's easy to build and fun to use.

ICOM and SGC - A Perfect Match - Bob Lewis, AA4PB
An interface circuit that brings a popular ICOM transceiver and an SGC tuner into blissful union. AA4PB shows how to make two popular pieces of gear (IC-706MKIIG and SG-237) to make one complete and more functional station.

An Integrated AO-40 Antenna System - Dick Jansson, WD4FAB
Take the Teksharp 1.2meter dish, add an AIDC-3731AA downconverter and you'll be working AMSAT-OSCAR 40 in no time!
www.teksharp.com
members.aol.com/k5gna/myhomepage/

Product Review - Joel R. Hallas, W1ZR

Ten-Tec Titan III HF Linear Amplifier - www.tentec.com
The Titan III rounds out the Ten-Tec line with a high quality legal limit amplifier that supports their QSK operation and should provide years of service.

Kenwood TM-271A 2-meter FM Transceiver - www.kenwood.net
The Kenwood TM-271A provides basic 2 meter FM mobil capability in a rugged package with just the features most amateurs need.

New Products

MFJ-1401 VHF Mobile Ground Plane Kit - www.mfjenterprises.com

Macloggerdx V3.8 from Dog Park Software for Logging software for

Macintosh - www.dogparksoftware.com/MacLoggerDX.html

Vehicle Mount for small devices from Pro.Fit International
www.pro-fit-intl.com

Lightweight Cables for Backpackers and QRP Fans - www.cablexperts.com

Three RF Switches from MFJ (MFJ-1703) www.mfjenterprises.com

Guywire Operated Antenna Trolley (GOAT) System - www.goatsystem.com

Sounds Sweet Communications Speaker - www.soundssweet.com

New Books

Ten Days in Utah: The Search for Elizabeth Smart - www.pdbookstore.com
This easy-reading book describes how the local ARES group responded immediately to the call for support.

Passport to World Band Radio - 2004 Edition - 20th Anniversary Edition - www.arrl.org/shop

NEWS AND FEATURES

Three Flags Mobiling, from ALCAN to the Yucatan - Part 2 - David A Rosenthal, N6TST (www.ridgenet.net/~n6tst)
After his northern journey, recounted in Part1, the author sets his sights on operating from a small rental car in the steamy Yacatan. Wrapping up his mobile odyssey, the author does his best Indiana Jones impression as he heads to the Yucatan to explore Mayan temples and mine the ham bands from his small rental car.

The Amateur Storm Chaser - Seth Price, N3MRA
College Student N3MRA uses ham ingenuity to find severe weather before it finds populated areas.

Once Upon a California Hilltop - Bill Pasternak, WA6ITF
Art Gentry, W6MEP, was a repeater pioneer whose story is still complelling 50 years later.

Happenings
Organizations' comments augment alarm over BPL; Ham antennas not a hazard to migratory birds, ARRL says; FCC begins "interference temperature proceeding"; more

Amateur Radio World
India's Hamfest 2003 a Success

QST WORKBENCH

The Doctor is IN
Transfer metrology; horizontal Hula Hoop; Collins receiver diode load; more

Short Takes - Joel R. Hallas, W1ZR
The A&A Engineering 5A Smart Battery Charger - www.a-aengineering.com

Rescaling and Customizing Meter Faces - Ronald Lumachi, W2CQM
Need a spiffy panel meter to complete your homebrew project? Save money by using readily available military surplus meters.

Hand-on Radio - H.Ward Silver, N0AX
Experiment #14 - Optocouplers - www.arrl.org/tis/info/html/hands-on-radio/

The Classic Multiband Dipole Antenna - Steve Ford, WB8IMY
It's easy to build and install, so why don't more hams use this wire antenna, fed with low-loss ladder line?

Short Takes - Clarke Greene, K1JX
Par Electronics SM-50 6-Meter Stressed Moxon Antenna - www.parelectronics.com

Hints & Kinks - Robert Schetgen, KU7G
Use antenna analyzers for better feedline-loss measurements; keeping water out of Hy-Gain TH-7 traps; more

OPERATING

2003 September VHF QSO Party Results - Jeff Klein, K1TEO
2003 ARRL 10GHz and Up Contest - David Sumner, K1ZZ

AMATEUR COMPLETE 82-MILE TWO-WAY DSSS LINK ON 2.4GHz

ARRL High Speed Multimedia (HSMM) Working Group member Ken Cuddeback, NT7K, reports that his students at Weber State University in Ogden, Utah, late last fall completed two-way direct-sequence spread spectrum (DSSS) communication on 2.4GHz over a distance of 82 miles. The WSU student group ? which included one ham, Brandon Checketts, KG4NZV and several prospective licensees ? broke the current world record of establishing a wireless link on 2.4GHz with DSSS (using IEEE 802.1b ?Wi-Fi? protocol). Cuddeback says his students used PrimeStar dishes with unamplified Cisco Aironet 350 cards ? which run about 100mW ? in each laptop. ?We set up a NetMeeting session and transferred a 2.5MB MP3 file successfully,? he said. ARRL HSMM Working Group Chairman John Champa, K8OCL, congratulated the group on ?this fantastic accomplishment!?.

RECONSTITUTING THE PACKET NETWORK - BY JOHN CLIFFORD, KD7KGX

Emergency communications is often presented as the primary reason for the existence of the Amateur Radio Service and our exclusive access to reserved frequencies. Especially in this day and age, when terrorism has replaced the various natural disasters as the primary threat in our lives, the ability of Amateur Radio to supplement our regular means of communications in the event of a major calamity is a real benefit that we provide to our fellow citizens. However, in the past decade we have let one of our primary assets, the packet radio network, waste away to point where it is more of a plaything than a valuable nationwide communications network. I believe that we need to change this, and reconstitute the amateur packet radio network quickly ? and make it better than it ever was.

Killing Two Birds with One Stone
The ARRL has realized that, without new hams, Amateur Radio?s days are numbered. While there are more hams now than ever before, the majority of today?s licensees are Technicians without HF privileges and may let their licenses lapse after the initial 10 years period. In order to increase the number of new hams, and to get younger people involved in Amateur Radio as a lifelong activity, the ARRL has created the Amateur Radio Education and Technology Program (www.arrl.org/FandES/tbp/faq.html). Also known as ?The Big Project?, its purpose is to encourage teachers to use Amateur Radio as a tool in the classroom.

The Stations in schools program is a key part of The Big Project. Qualifying schools are provided with complete Amateur Radio Stations, at no charge. Here?s where we can kill two birds with one stone. Provide a complete 9600 baud packet radio node to each station in schools participant that is set up and ready-to-go out of the box. Imagine how quickly the packet radio network could be re-established if one school in each community had a packet radio

node!

Fixing Packet Radio
Of course, we need to look at more than just sheer availability of nodes to reconstitute the packet radio network. Our goal should be to create a national network of packet radio nodes that allows transferring messages between every community in the country without using non-Amateur Radio infrastructure (like the Internet). We had a network before and it withered away from lack of use. So, how do we change things so that this doesn?t happen again?

First, we need to increase the rate at which data is transferred. After using the Internet at 56k or running DSL, the current VHF-based 1200 baud packet radio network is excruciatingly slow. However, being text-based, it doesn?t have to be that much faster to feel a whole lot faster. How fast is fast enough? Fast enough so that text appears on your screen at a faster rate than you can read. If the packet radio network ran at 9600 baud (960 characters per second) that would be fast enough. So?we go with 9600 baud modems, which are widely available at inexpensive prices (9600 baud Packet Handbook by Mike Curtis, WD6WHR at www.tapr.org/tapr/html/pktf.html) so current packet operators can easily upgrade. One benefit : 9600 baud FSK packet radio modems are slightly more spectrum-efficient than 1200 baud AFSK modems, resulting in less interference to others.

Second, we need to increase the number of amateur stations that are equipped to run 9600 baud packet radio. One way might be to require ARES organizations to establish 9600 baud packet radio nets and run them on a weekly basis, perhaps after the traditional VHF voice repeater-based net. Another might be to award significant bonus points to Field Day stations with 9600 baud packet radio stations that make contact with at least one EOC. Perhaps the ARRL can create an award for receiving a message via 9600 baud packet from each state, a Packet Radio Worked All States (PWAS) award ? no internet forwarding allowed! And, special recognition should be given to each 9600 baud packet radio node that can send a message to the ARRL?s W1AW 9600 baud packet radio node without having to piggyback that message onto the internet.

Third, we need to better integrate packet radio with our computers. Although the new network will not be the Internet, that this is so should be relatively invisible to us as users. We need to develop the necessary Software to allow common e-mail programs like Microsoft?s Outlook Express and Outlook and Qualcomm?s Eudora, to send and receive e-mail via packet radio. We also need to develop the necessary software to allow us to read and post packet radio bulletins and upload and download files via our web browsers. We should also create a chat tool that automatically determines the routing from our station to a desired node and then establishes the link, so that chatting with users a long distance apart is much easier.

Summary
Let?s fast-forward to the near future, when the High Speed

Amateur Packet Radio Network is fully functional. A hurricane devastates south Florida?but amateurs are quickly on air, and the new network quickly and efficiently relays health and welfare messages. A massive earthquake rocks the Pacific Northwest, knocking out phone communications and closing highways?but amateurs are able to communicate from emergency shelters via the new network, sending long lists of shelter residents, detailed requests for food and medicine, and health and welfare messages. A combination of computer viruses and physical attacks from terrorists manage to destroy several crucial internet backbone sites and shut down the internet, but the new network allows Homeland Security agencies to utilize ARES and RACES organizations and transfer important information.

I fervently hope that as amateurs we are never required to use any of our resources for emergencies, but ?stuff happens? is an unfortunate truth. Wouldn?t an Amateur Radio-based alternative to the Internet be an enjoyable resource for us, and a valuable tool for our country? Let?s build it now!

1651. Mayah drm 2010..... Does anyone know about DRM ???

Yahoo group: m_a_r_s
Date: 2004-04-06 12:34:19 UTC
From: vijay motwane
Topic: 1651 Message: 1651

Pre-Announcement

This DRM Receiver is the 2nd generation receiver for the Digital Radio Mondiale (DRM) standard. It is the result of a joint development effort of MAYAH, Coding Technologies, AFG and Himalaya. The receiver is based on standard components and different to the first generation, it is smaller and lower cost.

A DSP module performs all the DRM specific decoding functions. The software of the DSP module can be updated via the USB interface. The USB interface also provides the data from data application for further processing with a PC. The receiver can decode mono and stereo audio signals. The full stereo signal is available at the headphone outputs.

The display indicates station name, used frequency, field strength and the number of service components of the received DRM signal. Additional information transmitted will be displayed if available. The station can be selected by directly entering the frequency using the numeric keypad.

Beside the DRM standard the receiver also supports reception of analogue AM programs in the MW, LW and SW bands as well as FM programs.

DRM Order Info English (http://www.mayah.com/content/download/pdfs/drm/DRM2010_Info_e.pdf)
Purchase Order Form English (http://www.mayah.com/content/download/pdfs/drm/PO_DRM.pdf)

Interested to receive more information about the DRM Receiver 2010, its availability and price? Please register your email address below for the MAYAH DRM newsletter. We guarantee that your email address will not be used for any other purpose than information from MAYAH Communications GmbH.

Email Address

Full Name

If you have individual questions regarding this product, please contact drm@....

Size

21 x 7 x 13 cm

Outputs

Stereo Headphone and Stereo Line, both 3.5 mm jacket

Control

USB for data services and updates

Power Supply

External, 100-240 VAC, 47-67 Hz

DRM Modes

Channel coding/modulation

All channel coding / modulation as specified in DRM

All code rates, EEP and UEP,

Standard and Hierarchical modulation (SM, HMSym and HMMix).

MSC (64QAM and 16QAM), SDC (16QAM and 4QAM)

Long and short cell interleavers

Transmission structure

All robustness modes (A,B,C and D)

All spectral occupancies (4.5, 5, 9, 10, 18 and 20kHz)

Source Decoding

AAC and AAC+SBR mono, stereo

Order No.

DRM2010

Delivery time

Q4/2003

A joint development by

This page last updated Tuesday, 02 March, 2004

New DRM receivers previewed
Several new DRM receivers were previewed at the IFA 2003 in Berlin, the world's largest consumer electronics show:

Coding Technologies (CT) presented the first, 2G DRM consumer radio, the DRM Receiver 2010. A joint development by CT, Mayah and others, the DRM Receiver 2010 is smaller and less expensive than the first-generation models. As the first mass-produced DRM receiver, it will be ready for distribution in late 2003.

Fraunhofer IIS presented the DRM FhG Prototype Receiver, the NewsBox DRM Radio. It is a novel DRM receiver prototype designed to fit in a 19" hi-fi tuner rack, developed in the BMBF project, RadioMondo. It plays DRM audio and text, and permits navigation within the new data application NewsService Journaline, conveying categorised news in text form. Fraunhofer will also showcase the professional receiver, FhG Software Radio and the DRM Software Radio. The DRM Software Radio Project, managed by VT Merlin Communications, is at www.drmrx.org.

Robert Bosch GmbH showcased a modified car receiver that receives DRM signals on long-, medium- and short-wave (49m band only), using a conventional integrated RF front-end up to the 1st intermediate frequency. Digital decoding of the DRM signal is managed by a PC. Data services including Internet pages, slide shows and text will also be demonstrated. This was facilitated by Radiomondo.

WiNRADiO releases DRM-capable receiver
7 February 2003
WiNRADiO has released the WiNRADiO G303i, which it says is the first commercially available radio that can receive DRM with no hardware modifications. Radio Netherlands has not yet had the opportunity to test this receiver. More information on the WiNRADiO Web site (http://www.winradio.com/home/g303i.htm).

DRM Software now available!
31 December 2002
The DRM Software Radio application is now available via the DRM? Software Radio Web site (http://www.drmrx.org/). It's a 12 Mb download and costs 60 euro. Technical requirements are given on the site.

Technical documentation is currently online for DRM modifications to the following receivers:
- ICOM IC756 (English & German)
- Kenwood R1000 (English)
- Grundig Yacht Boy 400 (English & Spanish)
- JRC NRD 525 (English)
- Yaesu FRG-100 (English - MS Word document)
- AKD Target HF3 (English)
- AOR 7030 (German)
- Sony ICF-SW77 (English)

Except where stated, these documents are high-res and low-res PDF files. More documents will be added as they are published. Forums are available for discussion on issues arising, and there are separate forums for Spanish and German-speaking users.

DRM Consumer Receiver
The world-band consumer receiver, developed by Coding Technologies together with the BBC and German device manufacturer AFG, is based on a modular system design made up around standard components. It is a production-ready OEM receiver sample integrated in the case of a commercially available Sangean multi-band radio receiver.

The DRM system also uses aacPlus? by Coding Technologies as the standard audio coding format. aacPlus is a combination of MPEG AAC (Advanced Audio Coding) with Coding Technologies' groundbreaking SBR? (Spectral Band Replication) bandwidth extension algorithm. It's based on a DSP board so all the decoding is done in the radio itself. One other interesting thing worth mentioning is that it has two front ends (one tuned to frequency A while the other front end scans for the best frequency B) which allows for AFS (Automatic Frequency Switching). The price of this unit has not yet been decided.

DRM Software Radio Project
The DRM Software Radio, designed for private use, is a downscaled version of an existing, professional Fraunhofer receiver. Its features include: audio MPEG-4 AAC +SBR decoding, multimedia reception, selection of service and the possibility to log the reception quality (which can later be sent back to DRM). Its audio decoding library has been provided by Coding Technologies.

Radio enthusiasts may register their interest in the Software Radio Project at a special Web site now under construction at www.drmrx.org (http://www.drmrx.org/). This project is being co-ordinated by VT Merlin Communications Ltd. When the project officially launches in December, the Web site will be set up to support and distribute the software for a 2-year

period, and to analyse received DRM transmissions. It will also contain a discussion forum, worked examples of receiver modifications, an analysis section, and general information about the project. A number of screen shots, such as the one below, are already on the site.

Participants must meet the following technical criteria: Operating system: Windows 2000, Windows XP, or Windows 98. An AT-compatible PC with 500 MHz Intel Pentium processor (or equivalent), 64 MB RAM, 50 MB free disk space,16-bit SoundBlaster (or compatible) soundcard that supports full duplex at 48 kHz sampling rate for input and output; the input must be without AGC (Automatic Gain Control); for example: Creative SoundBlaster Live! or "USB One" USB audio interface. Notebook soundcards are not always compatible, and a compatibility list will be published. A front-end receiver is also required, an AOR7030 or another receiver which can be modified. The modification is the addition of an extra circuit board to produce an extra Intermediate Frequency (IF) of 12kHz. Several companies already sell these conversion boards.

Participants will need a receiver with a 12kHz IF, because this frequency is within the range of PC soundcards. Many radio receivers have an IF of 455kHz, so the extra circuit board mixes this down to the soundcard range. The PC soundcard is used to analyse the DRM signal.

The full version of this press release is available on the official DRM Web site (http://www.drm.org/newsevents/globpressreleas.htm).

Last modified 2003-12-10

Icom IC-F7000

Type:

Professional land mobile transceiver

Frequency range:

TX: 1.6-30 MHz
RX: 0.5-30 MHz

Mode:

AM/SSB/CW/AFSK/FSK

RF Power output:

Max 125 W (PEP)

Sensitivity:

AM (20 dB SINAD): 100 uV (0.5-1.6 MHz), 12.6 uV (1.6-30 MHz)
SSB (20 dB SINAD): 0.5 uV (1.6-30 MHz)

Selectivity:

N/A

Image rejection:

Better than 70 dB (1.6-30 MHz)

Voltage:

13.8 VDC +/- 15%

Current drain:

RX: Max 3 A
TX: Max 15 A

Impedance:

50 ohms, SO-239

Dimensions (W*H*D):

Main unit: 240*72*239 mm
Controller: 150*50*51 mm

Weight:

Main unit: 4.6 Kg
Controller: 220 gr

Manufactured:

Japan, 2003-200x

Other:

DSP. Various selcall functions.
400 regular channels. 100 ALE channels.

April 08, 2004

To the all Managing Committe Members and Members of MARS,

My QST is Jaipur and I can only virtually attend all MARS Meetings. I may please be granted leave of absence from physically attending all meetings held in Mumbai. This leave of absence application is for all future and past meetings, till my life, since I am Life Member of MARS. In case I happen to be in Mumbai on the day of the meeting and come to know about the meeting, it will be pleasure for me to attend the meeting and have eyeball with all.

Kailash Gupta, VU2KIZ & KG6SQR

1659. Increase in membership fees-reg

Yahoo group: m_a_r_s
Date: 2004-04-08 05:56:35 UTC
From: Prashant Koli
Topic: 1659 Message: 1659

Hi All,
This is to inform you that the Managing Committee of MARS has decided to:
1. increase annual membership subscription from Rs.250/- to Rs.500/- with immediate effect and

2. increase Life Membership from Rs.2500/- to Rs.5000/- from 1st May 2004.

Members who have not paid dues for the year 2003-04 should pay dues immediately; please note that it is one of the condition for filing nomination for the forthcoming election. Also those in arrears may not be permitted to vote.

1663. Poeratble Antennas for Field Exercise (2- 40 mtrs)

Yahoo group: m_a_r_s
Date: 2004-04-15 08:32:59 UTC
From: Huzefa Merchant VU2HIT
Topic: 1663 Message: 1663
Attachments: 16 described; binary payloads are missing from this source WARC

The Buddipole

It's a dipole... It's a vertical... It fits in your travel bag!. The Buddipole is more than an antenna, it's a versatile system for launching your signal. Optimized for transmit power and proven for DX work, the Buddipole is the secret weapon used by HF portable operators all around the world.

Precision engineered for maximum performance using ultra light composite materials and High-Q coils. Zero-loss balun with Quick-Connect feedpoint.

Buddipole Specifications

Specification Description
Length collapsed
22 inches (56cm)

Length extended
16 feet (4.9m)

Power Rating QRP to 250 Watts
Weight
Less than 2 lbs (<1 KG)

Coil Diameter
1.75 inches (4.5cm)

Frequency Coverage
7 to 54MHz continuous, plus 144 to 148MHz

(picture shown with short mast -- not included)

Antenna kit comes complete with two 22" black anodized aluminum arms, 2 multi-band coils (40m - 10m) with adjustable coil tap system (includes 3 removable taps, with coils premarked for 40, 30, 20, 17, 15, 12, and 10 meters -- 6 and 2 meters are configured without coils), 2 stainless steel telescopic whips, center tee with 3/8" x 24 adapters, BNC/PL259 coax connector assembly (includes RF beads) with 12' of coax, nylon "packcloth" carrying bag, black thermoplastic carrying case, and operating manual.
.
The price for the standard Buddipole is $199!

Optional Rotating Arm Kit -- $35 (see accessories page)

This kit allows the user to change configurations of the Buddipole very quickly. It's a kit for experimenters...for those of you who want to see, for example, if an L-shape or sloper is better than a classic dipole for DX'ing. If you own an antenna analyzer, this kit is for you!

The Rotating Arm Kit includes 2 "soft touch" rubberized clamping knobs, 2 machined 6061 aluminum rotating arms, and instructions for adjustment.

The Buddipole BP$199.00model: standardwith 25' coax assembly (instead of 12') (+$5)with Sky Blue colored arms (instead of black)

Privacy Policy . Info

W3FF Antennas is a manufacturer of a lightweight, versatile hf portable dipole antenna system for amateur radio. This hf antenna is instantly configurable as a vertical dipole or any one of several other shapes including a vee dipole, sloper, or L. The Buddipole dipole antenna is directional and can be converted to a an effective single element vertical antenna (the "Buddistick") by using either one of the dipole antenna arms and a counterpoise. The Buddipole or Buddistick are perfect for space-restricted covenants such as use as an apartment antenna, hotel antenna or backup marine antenna, or as a compact dxpedition antenna or backpack antenna.

Dear Friends,

MARs group is special space to me deep down in my heart. I was at Mumbai for a day or two but most important we got few Green BIrds working along with instuctions to avoid the pitfalls.

With great work being done by my friends it is simply a matter of time when rest of us go on air.l

What more can I say I'll be back next month.

Loking forward to much more new developments.

> Jim Fouts, AA4JF, at Northside High says his school also will use its
> Te@ch grant to add a new weather monitoring station--with Internet and
> Amateur Radio hookup software--and digital capability to its Amateur Radio
> club station, K4NHS. The school serves as a Georgia Emergency Management
> Agency (GEMA) shelter site. Amateur Radio would serve as the link between
> the school and the National Weather Service, Fouts said.
>
> The school also purchased two Family Radio Service units with GPS
> capability for training and use at parades and sporting events.
>
> The Best Buy's Children's Foundation's Te@ch Program awards recognize
> programs or projects that "creatively integrate interactive technology
> into the curriculum." The retailer this year awarded $2.9 million to
> schools across the country. An application is available on the Best Buy
> Web site
> <http://communications.bestbuy.com/communityrelations/docs/Teach_GrantApp.
> pdf>.
>
> ==>PENNSYLVANIA HAMS HELP EQUIP MOBILE COMMAND POST
>
> Amateur Radio input has helped to ensure complete interoperability for a
> new mobile command post in Northeastern Pennsylvania. The fully decked-out
> communications vehicle based in Wilkes-Barre is the result of a federal
> grant and volunteer assistance from three radio amateurs and several other
> volunteer radio experts, who got keys to the city in return. Armed with a
> $300,000 federal grant, Wilkes-Barre Mayor Tom McGroarty wanted to put
> some of the money toward a mobile command post--or MCP--project. He
> approached Bill Harding, KA3QPQ, of the city's engineering office.
> Harding, in turn, sought advice and assistance from Rich Arland, K7SZ.
> Other team members included Greg Berholtz, N3SFO, David Anthony and Leigh
> Thompson.
>
> "The plan involved purchasing off-the-shelf communications gear and
> configuring a mothballed GMC Suburban as a mobile communications asset to
> support interagency interoperability during emergencies," said Arland. Ham
> radio operators volunteer emergency communication services to 18
> communities in Northeastern Pennsylvania, he noted. After a briefing from
> Harding, the MCP project manager, regarding Amateur Radio Emergency
> Service/Radio Amateur Civil Emergency Service (ARES/RACES) operations,
> Arland said, the mayor wholeheartedly agreed that ham radio definitely
> should be part of the MCP equation.
>
> "All in all, the van has the capability to communicate on all ham bands
> from 160 meters through 70 cm on CW, SSB, data and FM," Arland reports. Of
> course, it also contains a full complement of low and high-band public
> safety (police, fire and emergency medical services) communications gear.
> Future plans call for the addition of a high-end GPS unit and a 2-meter
> transceiver dedicated to APRS. Needless to say, the van literally bristles
> with antennas--15 in all--most for VHF and UHF, although there's a
> screwdriver-type antenna for HF.

>
> So far, the MCP has been sent out twice--to support emergency operations
> following flooding in Wayne County and to assist after a prisoner escaped
> from a county lockup.
>
> ==>FCC CLARIFIES DOCKET NUMBER FOR FUTURE BPL COMMENTS
>
> The FCC says anyone filing comments on the its Broadband over Power Line
> (BPL) Notice of Proposed Rulemaking (NPRM) in ET Dockets 03-104 and 04-37
> should reference only the latter docket number, not both docket numbers.
> The ARRL was among those who had asked the FCC to clarify the matter. The
> deadline to file comments is Monday, May 3. Reply comments are due
> Tuesday, June 1.
>
> "To simplify this filing process and minimize the burden on both
> interested parties and the Commission's resources, we are requesting that
> parties responding to the Notice of Proposed Rule Making submit comments,
> replies and any other pleadings or information only in the newly
> established ET Docket No 04-37," the FCC said this week in a public
> notice. Written comments may be filed via the Electronic Comment Filing
> System (ECFS) <http://www.fcc.gov/cgb/ecfs/>.
>
> The Commission says that commenters should include their full name, US
> Postal Service mailing address and ET Docket No 04-37 when completing the
> transmittal screen. The FCC ECFS Express system
> <http://gullfoss2.fcc.gov/ecfs/Upload/> also now is accepting brief
> comments on the BPL proceeding, which is the top item on the list.
>
> For additional information on filing comments, see the FCC public notice
> <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-760A1.doc>.

CQ CQ CQ , CALLING ALL MARTIANS,

Hi All,

Hope u receive this in the pink of your health & just befor the Annual General Meeting of the

society, where elections for the Managing Committee are scheduled.

I am sure that you must have received by courrier, the notice for A. G. M. along with the

nomination forms sent by O M Nilesh [VU2 NLF]. Some of you must have filed the nomination

or are planning to file for the various seven [7] posts.

The society has faced two problems during the past elections.

[a] Insufficient compitient nominations to cover all the posts

[b] Some of those who were elected, could not find the time later on to render any service or

assistance to the society.

We can only hope that this year we will be able to build a better team. Apart from those who

are in the managing committee the Society expects that all members , Corporates Associate

& others to co operate in enlarging the membership of the Society.

Last meeting it was discussed about the members who were in arrears of subriction. Your

reminder to the defaulting ones [i.e. those living in your close vicinity or otherwise in contact]

may help in recovering some of the outstandings. Obviously the Society is difficult to run with

such huge backlog.

So the bottom line is , Seeking your support, monitorily, also by attending as many as events of

the society if not alll along with the forth coming A. G. M. & finally expecting your hole-heartedly

support to make the forth coming HAM FEST INDIA - 2004 a grand sucess.

73's

Yours in AMATEUR RADIO

Mumbai Amateur Radio Society

Dear Friends,

We are pleased to inform you that the Fourth Annual General Meeting
of our Society, The Elections for the Fifth Managing Committee and
The Annual Getogether will be held on 1st May 2004.

Venue : 'S.S. Hall', Garware Club, Wankhede Stadium, 'D' Road
Churchgate, Mumbai - 400 001.

Timing: 4:00 pm to 7:00 pm

Agenda for the Meeting.

4:00pm Chairman's Report.
4:15pm Secretary's Progress Report.
4:30pm Treasurer's Financial Report.
4:45pm Reports from other Members of the Managing Committee
5:00pm Plans and Proposals for the year 2004 - 2005.
5:15pm Voting for the Fifth Managing Committee.
5:30pm Any other topic with the permission of the Chair.
6:00pm Results of the Election.
6:15pm Tea and Snacks.

You are requested to attend this function and caste and participate in this Annual
Getogether (Eye Ball).

The Eligiblity for contesting and voting for elections are as under :-

1. Valid Amateur Radio Licence.

2. Valid MARS membership atleast one year old.

3. No society arrears.

The nomination form for the election have been couriered to all the eligible members. The
Nomination
form duly filled signed, proposed and seconded by an eligible member must reach us not less
then 3 days prior the election (27th April 2004). You may send your nomination form to the
society's registered office address.

All members are invited for the AGM, you are also requested to inform your fellow members
about the AGM and also ask them top confirm their participation.

Please note during last years AGM a lot of food was wasted and the society ended paying almost Rs.5000/- extra for the waste food, hence all members are requested to kindly confirm your participation with NLF-98205-47074 / ZRS-98210-25289.

We sincerely hope that you will join us and make this event successful.

Thanking You,

For Mumbai Amateur Radio Society.

Nilesh Rathod. - VU2NLF
Secretary.

Hi OMs / YLs!!

If you have nice photos of any of the MARS events (APR 2003- MAR 2004) like 3rd AGM, Gandhinagar Hamfest, Demonstration, Classes at Thane & Churchgate, Class Field Trip at Pune or Wangaon, Ganesh Visarjan, JOTA, Scramble Excercise, Fox Hunt, etc., kindly e-mail or courier them to me till Monday evening i.e. 26.04.2004. I require those for this year's Annual Report.

For scanned or digital images (800x600 pixels or less):
e-mail them to vu2ugo@...
or upload them into PHOTO section of the egroup
(pls do not post them on the egroup)

For hard copies :
please courier them to me or inform me about it on e-mail vu2ugo@...
ASAP.
(hard copies will be returned after few days or on 1st May at the meeting)

Thanking you in advance.

Hi Martians,

Apologies for a delayed mail on the subject. Somehow i got blocked from Yahoo groups and have been struggling to activate the same.

As mentioned by NLF, AGM will be held on 1st May as usual at SS Hall, Garware Club, Wankhede Stadium.

Also would like to re-iterate the request of confirming yourself and showing up at the event to avoid waste of food and money. You can confirm with me as well on 920444991.

Will keep sending more information on the same, if any.

Mehul Chovatia - VU2 ICQ
Event Manager.

Mumbai Amateur Radio Society

Dear Friends,

Once again to remind you that the 4th Annual General Meeting fo our Society shall be conducted on 1st May 2004 at 4:00 PM at "S.S.Hall" Garware Club, Churchgate, Mumbai.

The election for the 5th Managing Committee shall also taken place during the A.G.M. As per my records 104 members are eligible to contest for elections. Their Nomination form have already couriered to them. The Nomination form duly filled signed, proposed and seconded must reach our office latest by 27th April 2004.

With much regret, I have to inform you that till date, we have not received a single nomination. I simply fail to understand why ? For the records I also wish to inform you that I am not contesting the elections. So all the members scared of my so called "Whip" can relax and run for office. There would be no NLF to take your case. You may run the society as you like... like a hobby maybe...

Futher my earlier reqested all of you guys to confirm you participation for the AGM, as we don't want ot waste food. Once again with much regret I have to inform you that so far I have received only following confirmations..

VU2NHR, VU2POK, VU2UGO. Ulhas. will attend.

VU2YJM, VU2FEO would not be able to attend.

I take it for granted that the Managing Commitee members will remain present by default.

At this rate I wonder how much food to be ordered ..???

Please be responsible and confirm immediately with NLF, ZRS or ICQ.

Dear Hams @ MARS,

Greetings from New York City.

I am visiting USA for the first time and enjoying myself out here not only visiting my sister's family in NYC and brother's family in Maryland but also made visit to Amateur Radio activities going on out here.

Attended Baltimore Amateur Radio Club's monthly meeting, Greater Baltimore Hambooree and Computerfest, Long Island Mobile Amateur Radio Club's monthly meeting. Visited ARRL HQ in Newington CT and UN's Ham Radio Station 4U1UN.

I have confirmed my reservations to visit the WORLD'S BIGGEST HAM RADIO EVENT - The Dayton Ohio's Havention 2004 on the May 14th to May 16th before returning back to India via UK where I will be staying for a forthnite.

With all the above excitment, I would be missing the MARS AGM.

Dear Friends,

It is brought to my notice that some SWLs are confused about their eligibility for attending the AGM.

Please note all MARS members are welcome to attend the AGM, that ofcourse includes all the students (who are also complimentry members) of our society. The SWLs may not have rights to vote or contest the elections, but they are always welcome to attend the AGM.

Please confirm at your earliest and oblige.

Mumbai Amateur Radio Society

Dear Friends,

The Hamfest India 2004 meeting will be held on Sunday 2nd May 2004 at 10:00 AM at B.S.Bengelle Girls School. All members who are part of Hamfest Team must attend the meeting without fail.

The Agenda for the Meeting:-

1. To re- evaluate the commitment of all the Hamfest 2004 team members.

2. To decide weather to do the hamfest 2004 ?

3. If positive response (hopefully) ... decide the working schedule from now till the hamfest... (meeting dates etc.)

4. Allocate appropriate work assignments..

5. Fix Deadlines for each portfolios.

Please note if we don not have favorable response, we will have no choice but to cancell the hamfest in Mumbai and handover the charge back to GIAR, who can in return give it to some other society which is interested..

Looking forward to your commitment with full dedication...

73

Nilesh, VU2NLF.

Convener, Hamfest India 2004.

Mumbai Amateur Radio Society

Dear Friends,

Our Fourth Annual General Meeting of our Society, The Elections for the Fifth Managing Committee and
The Annual Getogether will be held on 1st May 2004. The last day for filing your nomination was 27th April 2004. Unfortunately we have received only 2 nomination forms, VU2HIT & VU2RIO. We require atleast 7 nominations for elections.

We will extend the last date for filing nomination to 29th April 2004. After which it will take time to prepare the ballot paper etc...

I have already informed that I would not be contesting this year, simply because I am the convener for the Hamfest India 2004, which itself is a huge responsibility and it is physically not possible for me to run the society and the hamfest simultaneously.

Looking at the current situation (as discussed with the present M.C), if we do not receive atleast 7 Nominations out of some 104 eligible members, then we will have no choice but to cancel the elections and during the AGM we will propose the amendment in our constitution section 12 (1b) & section (1c). Allowing non callsign holder to contest the elections.

I sincerely once again request all the eligible members to reconsider and contest for the election, failing which we will have to take action, which will open doors to a lot of QRM in future.

By the way on personal front, I am very proud of VU2HIT and VU2RIO, atleast somebody cares...

73

Nilesh Rathod, VU2NLF,

Secretary, MARS.

1692. AGM and Nomination

Yahoo group: m_a_r_s
Date: 2004-04-30 20:06:01 UTC
From: vu2kiz
Topic: 1692 Message: 1692

I could read the messages of last few days just now.

First of all I have already sent a message that since I am at Jaipur, I cannot physically attend meetings. My leave of absence for AGM was not shown in the message regarding this.

Secondly, I have not received the Nomination Form sent by courier to all eligible members. In fact, I have never received nomination form in the past also. I think documents and other material are sent to members who live in Mumbai only.

Thirdly, if sufficient nominations for the managing committee have not been received and it is still open to offer nomination, I offer my nomination. However, I neither have the form nor the two MARS members at Jaipur to sign the form. Even if nominated and elected, I shall not be able to attend the Managing Committe meetings personally, although I could contribute to MARS by other means and participate in special events. Members may think over it.

Forthly, I oppose the suggestion to change constitution for allowing non Callsign holders to be made members of the managing committee.

Kailash Gupta, VU2KIZ & KG6SQR

1698. IARU Contest

Yahoo group: m_a_r_s
Date: 2004-05-06 03:52:30 UTC
From: sarla sharma
Topic: 1698 Message: 1698

Hi all,
As announced in the AGM, the IARU worldwide dx contest is scheduled for July10 and 11, 2004.
In this event all member countries of the IARU(International amateur radio union) participate. In India, the ARSI(Amateur radio society of India) is the recognised member. This year with ARSI president VU2RCR, Chandru becoming a director in the IARU, we should make a strong presence in the contest.
In this contest every country puts up one HQ(head quarter) station on all the bands and modes. These HQ stations keep giving their calls and reports for the full 24 hrs of the contest. For ex. India's call would be VU2HQ, and the report we will be giving is 59ARSI.
For this contest we need volunteers with ready stations. We will be operating one transmitter, multi operator for one band and one mode. Those interested may please get in touch with me on this group add or via my address sarla_sharma@... or lima lima 25682361. After looking at the response, a decision will be taken. Everybody can participate, including non ARSI members. SWLs are also welcome as there is plenty to do behind the scenes. All details on the contest are available on the net. All contests on air are fun but this one is less taxing as its only for 24hrs. The main aim is to show that India has the stuff required and in the process also enjoy ourselves.
Let me know.
I am sorry for the delay in putting out this mail, but my computer was attacked by a deadly virus inspite of all precautions taken.
I take this opportunity to congratulate the new commitee of MARS.
Sarla

<<HSMM Microwave Radio >>
By John Champa, K8OCL, k8ocl@..., Gerry Creager, N5JXS, n5jxs@...,
Ron Olexa, KA3JIJ, ka3jij@...

HSMM stands for High Speed Multimedia microwave radio. It is not a specific operating mode, but rather a direction or driving force within Amateur Radio. The current developmental emphasis is adapting inexpensive off-the-shelf 2.4 GHz IEEE 802.11(r) equipment to operations under Amateur Radio service regulations, which in the US are covered by FCC Part 97.

HSMM microwave radio, although digital, it is not primarily a keyboard radio communication medium as in packet radio, as most amateurs presume. Amongst the capabilities of HSMM microwave radio most frequently used are digital voice (DV) and amateur digital video (ADV). Keyboard messages are possible, of course (chat mode) as in PSK31. Also, file transfers can be exchanged as in RTTY, but at significantly higher speeds! Plus, if there is a server on the HSMM microwave radio network, such operations as emailing, playing interactive games, and maybe even surfing the Internet by sharing a high-speed Internet connection with another amateur, are all possible. That is why it is called multimedia radio.

Although not perhaps the killer application, the HSMM driving force is emergency communications support. Imagine being at an emergency scene and being able to send live video images of what is happening back to everybody on the HSMM microwave radio network, back to the EOC, and at the same time submitting a written report, long list of survivors, etc. All that is often needed is just your laptop computer, a special wireless local area network PCMCIA card with an external antenna jack (in HSMM jargon that is called a RIC, meaning a radio interface card), a small digital camera, and a short Yagi antenna. Except for the RIC and the little antenna, you may already have all this gear!

<<Background >>
A survey conducted by the ARRL Technology Task Force, of League members and other amateurs revealed that the number one Amateur Radio interest in new technologies was in high-speed digital radio networks. Some suggestions were: ? High-speed radio data links up to 20 Mega bits per second (Mbit/s) ? Ethernet at 2 Mbit/s on 10 GHz ? Encourage development of a high-speed amateur digital radio network ? High-speed digital audio/video radio In

January 2001, the ARRL Board of Directors voted unanimously that the ARRL should develop high-speed radio digital networks for the Amateur Radio service. The ARRL president appointed a group of individuals knowledgeable in the field from the international amateur community and industry. The group would report to the ARRL Technology Task Force.

<<HSMM Working Group >>
The working group?s first focus is on creating the microwave skills within the Amateur Radio community that are necessary to build and support portable and fixed high-speed radio based local networking. That?s where amateurs interested in HSMM microwave radio can offer the most value to local RACES and ARES organizations, as well as to homeland security and other emergency communications efforts at the present time.

During Field Days and simulated emergency tests (SET), the HSMM Working Group encourages amateurs to hone their skills in doing rapid site surveys and deploying broadband HSMM microwave radio networks in the field. Some clubs put all their Field Day stations with their laptop based logbooks onto one radio local area network (RLAN). This offered a tremendous competitive advantage. For example, if you are working 20M, you can see that the 15-meter band has just opened up because that tent?s logging score is going through the roof. In another example, during the recent Midwest VHF-UHF Society (MVUS) Picnic 2003, an RLAN was used to link antenna test measurement results back to a printer. You get the idea. Use your imagination. The possibilities are almost without limit.

In this process of everyday use of HSMM microwave radio, we are trying to understand how to enhance the reliability of our mainstream Amateur Radio network connections. Through various emergency communications training programs we will be trying to incorporate information to help local hams to be the people in their community who deploy these high-speed microwave radio networks on demand.

The primary means by which an amateur can become immediately involved today in HSMM microwave radio networking research is by adapting off the shelf IEEE 802.11 gear to operating within Amateur Radio regulations. This equipment is also known as WiFi equipment, and is commonly available at computer equipment retailers. As sold, the equipment operates in the 2.4 GHz ISM bands under Part 15 rules. The 802.11b standard (more on that later) was developed about six years ago for the purpose of providing a wireless alternative for office LAN installations. This wireless capability was to allow office LANs to be deployed without the expense and nuisance of running CAT5 cable to each computer. Due to the increase of homes with multiple computers, as well as rapidly falling price points for WiFi equipment, WiFi hardware has had a significant penetration into the home market place. In fact, in a recent CQ survey (?What You Have Told Us,? CQ, September 2003, p.40), 8% of the respondents reported already using some kind of wireless networking, so there is already a growing understanding of the technology within the amateur ranks. A number of Livingston County amateurs already use WiFi in their homes.

The equipment as purchased has significant operating limits. Due to the Part 15 operating rules, power is severely curtailed. Remember, just like cordless phones, this hardware has to allow uncoordinated operation of many unlicensed devices with minimal interference. In addition, many users of this technology adopted it because it allowed unencumbered connectivity for a laptop computer. By nature of the fact that a laptop is battery powered, most client cards offer only a small fraction of the power authorized under Part 15 rules in order to maximize battery life.

Depending on your needs, as an amateur neither of these considerations is a limit on your use of the WiFi technology. While a system as sold may have a range of only 50 to 100 feet, proper setup of a system under amateur regulations can provide coverage far in excess of that distance. In fact, one of our HSMM Working Group?s test networks, called the Hinternet in Livingston County Michigan, can easily do 5-15 miles ranges at speeds of up to 54 Mbit/s (half-duplex) using small mastmounted dish antennas in conjunction with offthe- shelf consumer-grade hardware.

<<Getting Started In HSMM Microwave Radio >>
Getting operational with this equipment is a bit more complex than going to Universal Radio(r), buying an HF, VHF, or UHF rig and going home and connecting a key, microphone and antenna. Because this is data radio local area network (RLAN) equipment, it expects to be communicating with a computer, or more precisely with software running on a computer. So you first must decide what interfaces you are going to need to connect to your computer. Luckily, equipment is available for all the standard computer interfaces: Ethernet, USB, and PCMCIA.

If you use a laptop in your station, get the PCMCIA card. We recommend the type with an external antenna connection.

If you have a PC, get the WLAN (Wireless LAN) adaptor type that plugs into either the USB port or the RJ45 Ethernet port. Select the one best suited to your computer and your experimentation.

This is the heart of your new microwave digital radio station. It is a computer-operated HSMM 2.4 GHz microwave radio transceiver and it will probably set you back about $60-$80. It is usually easier if you start off teaming up with another ham radio operator living nearby and do your initial testing in the same room together. Then as you increase distances going toward your separate station locations, you can coordinate using a suitable local FM simplex frequency. The most often-used HSMM microwave voice coordinating frequency is 446.00 MHz, the National Simplex FM Calling Frequency for the 70cm band

Go to the local OfficeMax (r), Radio Shack (r), ABC Warehouse (r), or other consumer electronics outlet and purchase some economical and readily available wireless local area network (WLAN) devices. We recommend that you select devices that state they comply with IEEE 802.11b and are WiFi compatible. Because these devices are made by numerous manufacturers each using different techniques to achieve the same thing, there were initial complaints about interoperability between devices of different manufacture. An industry group known as the WiFi Consortium, was formed to provide

testing and certification of 802.11b devices. If the equipment is WiFi certified, it will interoperate with any other WiFi certified equipment, thus easing your initial installation and troubleshooting by assuring that device compatibility is not the root cause of a start-up problem. These devices operate on 2.4 GHz band using direct sequence spread spectrum (DSSS) with CDMA modulation at speeds up to 2 Mbit/s and complementary code keying (CCK) modulation for speeds of 5.5 and 11 Mbit/s. Operating speed is automatically selected by the equipment based upon signal to noise and signal strength of the operating channel. These 802.11b devices are usually the least expensive, are the easiest to work with, and offer the good propagation.

For a slightly additional expense, purchase the newer IEEE 802.11g devices. 802.11g is a relatively new standard that increases the speed of the channel from 11 Mbit/s maximum to 54 Mbit/s maximum. They also operate on the same 2.4 GHz frequencies, but use a form of modulation called orthogonal frequency division multiplexing (OFDM) to achieve the higher data rates. OFDM requires significantly more signal strength and signal to noise ratio in order to achieve 54 Mbit/s throughput but appears to tolerate multipath effects caused by radio signal reflections better than CCK modulation, so it may offer better propagation characteristics in certain cases.

When purchasing your equipment, there are a few things to be aware of. First, make certain the supplied rubber duck antenna(s) are removable and/or there is an external antenna port. If the device does not have an external antenna connection, check Don Rotolo?s (N2IRZ) article in the February 2003 CQ for details on how to modify the device. Second, look at the radio specifications for the device. The transmit power and receive sensitivity varies widely among devices. Try to buy a device with the best (highest power and lowest receive sensitivity) specifications. The best generally available equipment has 100 mW (20 dBm) transmit power and -93 dBm receive sensitivity at 11 Mbit/s, while the poorest specs are 25 mW (13 dBm) transmit power and -87 dBm receive sensitivity at 11 Mbit/s.

Radio at these frequencies behaves the same as radio at any other: a 6-dB power increase will double effective range. Here we?re dealing with a 12 dB advantage of the higher performance equipment versus the lower. In a small Part 15 home WLAN the difference is probably not noticeable. For our purposes operating longer distances under Amateur Radio regulations, a 12 dB difference is critical, and can make the difference between successful experimentation and frustration and failure.

If the device does have an external antenna connection, then go to any issue of CQ Magazine and look up Nemal Electronics(r), CableXperts(r), or other cable supply source and order an 18?- 24? strain relief cable, also called a pig tail. Order the type of pigtail needed for your device. It will probably cost less than $20. If you purchased a PCMCIA card, the pigtail will have a strange looking miniature antenna connector at one end, and should have a normal N-series connector at the other.

The first thing you will need to do is install the device in your computer. If you are using a PCMCIA or USB device you will need to install drivers. If you are using a device with an RJ-45 Ethernet interface, no drivers are needed for the device, but there are drivers needed for the Ethernet port in the computer. Additionally, there will be a method to communicate with this device for configuration. The included directions will explain how to accomplish this.

After you load up the software drivers on your PC, you will have two choices for configuring the equipment: ad-hoc and infrastructure mode. For now, set the device for ?ad hoc? mode, and set it to any channel between 2 and 5 (they?re in the correct portion of the amateur band). If all is operating correctly, the two cards (yours and your buddy?s) should see each other and set up a communication session. Once the cards are talking, you can share files between the two computers in the same manner as if the computers were hardwired together on a LAN.

Once you have the cards tested and know you have a connection between them, it?s time to add the outdoor antennas and see what distances you can achieve between the two devices. Hook up any external commercial (e.g., Comet (r)) or home-brew 2.4 GHz antenna. Shop around where the AMSATOSCAR- 40 guys buy their Mode-S antennas for some good designs. Keep in mind, the higher the gain of the directional antenna, the smaller the main lobe will be, so aiming a high gain antenna will be more critical than aiming a low gain one. Most 802.11 equipment has a utility included that shows signal strength and signal-to-noise ratio. Using this utility to monitor signal strength as you aim your antenna will be of great assistance in finding the optimal aiming direction. Remember these antennas are directional in both horizontal and vertical planes, so you have to carefully aim in both azimuth and elevation to get optimum signal at the receiver.

Another thing to keep in mind is coax. Coaxial cable losses at these frequencies are enormous. Don?t even try to use RG8 cable to connect between the device and antenna. You will need to purchase the best coax you can afford in order to keep line losses minimized. In fact, the antenna coaxial cable will likely be the most expensive part of the entire station, as you will want to use the lowest loss type you can handle, e.g. LMR-400, etc.

That?s all there is to it. Best of all, you may not have spent more than $100 so far, depending on what antenna hardware you have around.

Now point your antennas at each other, and fire away. At these power levels there is not much concern for RF safety, but if you are using a high-gain antenna, it is recommended you avoid standing directly in front of the business end while on the air.

<<HSMM Identification Methods >>
Do remember that it?s your responsibility to properly identify your station during use. In the mode you are presently in, the ad hoc or direct station-to-station mode, the most common technique is to simply ID in-mode, i.e. if you transmitting voice, simply speak your call sign into the microphone. If you are transmitting video, just hold a QSL card up to the camera. Or, you can send a ping containing your call sign. Remember that as

long as the RIC is operating, even with no traffic, the system is transmitting!

<<Antennas >>
Depending on how close your ham buddy is to your location, how high and clear over the trees your antennas are (2.4 GHz doesn?t go through trees very well), the quality of the coaxial cable you are using, and many other factors, you should be able to get several miles range. Remember, these HSMM microwave radio devices are truly QRP and run only about 30-100 mW of RF output, so be resourceful and experiment often with different antennas. Antennas are the easiest method of improving range. Each dB of antenna gain adds to the effective power and sensitivity of the radio. Let?s assume you have a radio with 25 mW of transmit power. Attaching a 3-dB gain external antenna (assuming no line loss) will increase the effective radiated power to 50 mW. A 30-dB gain dish antenna will increase the effective radiated power to a full 25 Watts! Antennas at these frequencies can have large gains in small packages, and can be easily used to achieve large increases in coverage.

If your signals are not covering the path between you and the nearest other HSMM microwave radio station, then open a copy of any edition of the ARRL Handbook and read the sections on antennas, transmission lines and UHF propagation. Consider putting the antennas higher, getting or building higher gain antennas, using lower-loss coaxial cable, etc., until the link is achieved.

You may also find a way to mount you gear at the antenna, and avoid the expense and loss of coaxial cable, too. This is another reason to consider devices that have Ethernet output. Standard CAT5 Ethernet cable can be run up to 300 feet with no loss. In comparison, USB can only be run 9 feet without a signal booster being installed. By using an Ethernet-based device, it is easy to remotely mount the unit close to the antenna and run cheap CAT5 cable back to your computer.

<<Running Higher Power >>
Using higher power in HSMM microwave radio is a last resort. It is a sound operating practice to run the minimum power needed to maintain the communications. Be considerate of others who may be using the band, both amateur and nonamateur. Use only the minimum power needed for the link.

If the link analysis (see the link calculations portion of www.arrl.org/hsmm/) clearly indicates that additional power is required, then what is usually needed is a bi-directional amplifier (BDA). This is a super fast switching pre-amplifier/ amplifier combination that is mounted at the end of the antenna pigtail near the top of the tower or mast. A reasonably priced 2.4 GHz 1.8 watt output BDA is available from the FAB Corporation (www.fab-corp.com) specifically for HSMM microwave Amateur Radio experimenters. This additional power output should be sufficient for nearly all amateur operations, even those supporting emergency communications which may require more robust link signal margins than normally needed by amateurs. Because of strict Part 15 regulations prohibiting the use of such

devices by unlicensed individuals, a copy of your amateur license will be required with your order and the shipment will only be made to the address in the FCC database.

<<HSMM Microwave Radio Repeaters >>
The next step up the functionality ladder is to add a ?repeater? to your system. More properly called wireless hubs or access points (AP), this device will allow several Amateur Radio microwave stations to share the network (and all the devices and circuits connected to it). An 802.11b AP will sell for about $100 and 802.11g AP for about $140. The AP acts as a central collection point for traffic, and can be connected to a single computer or to a network. It can also be used to allow several amateurs to share one high-speed Internet connection. The AP is provided with an ESSID, which is the name it broadcasts. For our purposes, the ESSID can be set as your call sign, thus providing automatic, constant identification. To use an AP in your network, the computer users have to exit ad-hoc mode and enter infrastructure mode. Infrastructure mode requires you to specify who the network the device belongs to. This is what the ESSID does: identify the AP to its users, so the users can find the home system they belong to. Set your computer device to recognize the ESSID you assigned to your AP.

The AP can also be used as one end of a pointto- point network. For example, if you wanted to extend a network connection from one location to another, you could use an AP at the network end and use it to communicate to a computer at a remote location.

Using an AP allows more features and security than provided by ad-hoc mode. For example, most APs provide DHCP service, so they will automatically assign an IP address to the computers connected to the network. In addition, they provide filtering that allows only known users to access the network.

What frequency do you set on the AP? The HSMM Working Group recommends to everyone that they avoid using channel 1 (center frequency of 2412 MHz). Use of this channel may cause interference to the AMSAT-OSCAR 40 satellite downlinks. The WG also recommends that Amateur Radio stations avoid the use of channel 6 (center frequency of 2437 MHz). This is the most common default frequency used by the majority (80 %?) of Part 15 unlicensed stations for wireless local area networks (WLAN). At present, the most popular frequency used by Amateur Radio microwave stations for HSMM research is 2427 MHz (channel 4).

Note: If you use an HSMM microwave repeater to share high-speed access to the Internet, don?t forget Amateur Radio content restrictions, e.g. no porn, no commercial business e-mails, etc. Don?t worry about pop-up ads. Pop-up ads, although a nuisance, are no more illegal than an ATV station transmitting an outdoor scene inadvertently picking-up a billboard in the station camera.

<<HSMM Software >>
For operating software, most amateurs are using Microsoft (r) NetMeeting collaborative software, which comes free with the Microsoft Windows (r) operating system. Other forms of open source groupware using Linux are also

popular. Try using OpenH323 or Speak Freely. By connecting a microphone to the audio input of your soundcard, you can have digital voice QSOs. By connecting an inexpensive digital camera ($20) you can do digital video QSOs. These are not the same quality as the usual ATV contacts, but the equipment is much less expensive! (HI)

<<HSMM Traffic >>
How do you keep Part 15 unlicensed traffic from accidentally using your Part 97 licensed HSMM network? A traffic separation technique that is considered acceptable involves the use of WEP (wired equivalent protection)...not for encryption, but for authentication. If you use this approach under Part 97, therefore, you must publish the WEP key. We recommend that you ask that your HSMM repeater?s WEP key be published on the HSMM web page (www.arrl.org/hsmm/), or simply use the amateur common WEP key already designated on that web page. Again, the WEP is used to avoid the accidental mixing of Part 15 and Part 97 traffic, i.e. authentication, NOT encryption. Another approach gaining in popularity with many HSMM microwave stations is the use of 44 domain IP (Internet Protocol) addresses, which are only available to the Amateur Radio service.

<<Proposed HSMM Network Infrastructure >>
The HSMM Working Group is following a systems engineering approach toward the development of a nation-wide Amateur Radio HSMM network, as directed by their ARRL charter.

Although the initial draft of the proposed HSMM Network Infrastructure, also affectionately know as the Hinternet, has not yet been approved by the HSMM Working Group and subsequently opened for public comment, we can discuss here some of its planned key provisions.

One key element of the infrastructure specification and design is linking fixed emergency communications (EMCOMM) sites in a metropolitan area that will be utilized in emergency settings. This entails fixed path links, accessible by the target endpoints solely. Another element of the infrastructure planning is creating an integrated network of these point-to-point links, so that they are useful. Having a link between two sites is wonderful, but not too useful when there are 20 sites that need to communicate. To achieve this linking, we anticipate using conventional Ethernet switches (not hubs!) to interconnect the wireless devices at node points, and we incorporate good RF practice in spatial and frequency diversity (different channels, changes in polarization, good horizontal and vertical separation) to achieve multiple links from a single site. One consideration in all of these links: We are recommending high-gain dish-style antennas, rather than omni directional antennas at the node sites. These antennas are readily available for less than $100 with antenna gains in excess of 20 dBi. Both horizontal and vertical polarizations are available from most manufacturers.

Not all sites will require ?full bandwidth? links to them. To accommodate the ?last mile? links where 2.4-GHz spread spectrum might not serve, other alternatives, such as high-speed packet (56 kbit/s, or modem-speeds) or the

Icom D-Star(r) system might serve well. Other alternatives, such as Virtual Private Networks (VPNs) across the existing, wired Internet may offer routine interconnection, while not necessarily being EMCOMM-capable or acceptably redundant.

In linking over longer distances, infrastructure considerations are more challenging. Here, almost certainly, we will consider Internet VPN links between established metropolitan networks. But this is only the beginning. Exciting experimentation is already going on within the HSMM Working Group.

<<Recommendations >>
Amateurs of all license classes are encouraged, to get on the air with inexpensive HSMM microwave radio using 802.11 off-the-shelf gear operating under amateur regulations. It is easy, low-cost spread spectrum microwave radio experimentation. For more details and for the latest developments on all these initiatives, check out the link to HSMM WG open reflector at Texas A&M University at http://listserv.tamu.edu/archives/arrl- 80211b.html or send e-mail to n5jxs@....

1703. The New Commitee

Yahoo group: m_a_r_s
Date: 2004-05-07 13:19:38 UTC
From: vusarla
Topic: 1703 Message: 1703

At the outset, there was this very interesting mail sent to my other email address which I have cut and pasted below:
Hi all martians,

First of all CONGRATULATIONS to the new MANAGING COMITTEE MEMBERS

This comes to your way after the Annual General Meeting of the society which was held on Saturday the 1st of May,at S.S Hall, Garware Pavilion Churchgate, Mumbai.The attendance of 72+ was not at all encouraging. Members from outside Mumbai were not expected much, but even local members did not attend the meeting for various reasons of their own.

Altough nominations were invited from 104 eligible members to elect the members for the Managing Committee, but unfortunately only 2 members [VU2 HIT & VU2 RIO] had filed the nominations till the due date, & then at the eleventh hour some of the members had to be provoked to file the nomination so as to climb the magic number of seven.[7]

Are members os indifferent & negilient to the running of their own society that they are unwilling even to propose their names for serving on the Managing Committee ?. With the forth coming HAM FEST 2004 ,which will be hosted by M A R S , this is'nt at all a good & healthy picture .

And finally, was waiting from some one from the new Managing Committee to anounce about the names & designations of office bearers on the mail, but was again disappointed !!!!!!!!!
So here's the info for those were not present for the meeting ###

Chairman : HUZEFA MERCHANT (VU2 HIT) Secretary : MEHUL CHOVATIA (VU2 ICQ)
Treasurer :PRASHANT KOLI (VU2 CBU) Member : ARUNSINGH RAWAT (VU3 AUA)
Member : PANKAJ PASAT (VU2 RIO) Member : ANISH KORDE (VU2 OZO)
Member : KAPIL CHANDANI (VU2 MIG)

Once again wishing ALL THE BEST & EVERY SUCESS to the new Managing Committee

73's

de MICKY [VU2 IZO]

I think the business of people not coming forward to contest for posts exists in all kinds of societies, big and small. We are no exception. Cajoling, requesting, bullying are all done only on D day. In my experience of Ham clubs all over the world, the scene is similar. But it always works out in the end. So instead of berating and giving a dressing down, I think we should look forward not backward.
MARS is in the capable hands of Mehul and co who are great guys and I am sure will do a damned good job. I am sure in the next election, VU2IZO Mickeyji will be the first to send in his nomination and be a fitting example for the rest to follow.
Cheers guys and all the best,
Sarla

1704. Monthly meeting for May 2004

Yahoo group: m_a_r_s
Date: 2004-05-07 15:51:15 UTC
From: Mehul Chovatia
Topic: 1704 Message: 1704

Hello,

Pls note that the monthly meeting will be held at Bengallee Girls high school between 10 to 12 am. Points to be discussed as follows:

1. Portfolios of new Managing Committee.
2. Issues discussed and decisions of Managing Committe meeting.
3. HAMFEST update.
4. Any other points with the persmission of chair.

Thnks,

Mehul
Secretary - MARS.

From: milind korde
Topic: 1703 Message: 1708

Dear Sarla.

Thanks for the attention.

Actually while asking others about the reason of not coming forward

to contest in the elections, it simply missed out of my mind to mention

about my commitment for HAMFEST 2004.

Being busy with morning QTH it would have been quite impossible

to attend all the meetings of h/fest as well as of the society & hence

did not file the nomanition, but surely will be the first to do so in the

next year & promise to meet your expections in future.!!!!!!!

Mumbai Amateur Radio Society

Dear Friends,

The hamfest India 2004 monthly meeting will be held on Sunday 16th May 2004 at 10:00 AM Sharp at B.S.Bengelle Girls School, Churchgate.

All members part of the Hamfest Team are requested to attend the meeting on time, Members who could not attend the meeting on 2nd May 2004 are specially requested to attend on this Sunday without fail.

Appropriate work assignments will be allocated to you on this Sunday. It time to rock and roll....!!!

Looking forward to having an eyeball with you,

73

VU2NLF, Convener hamfest India 2004.

1710. HAMVENTION 2004 - Dayton Ohio May 14th to 16th, 2004

Dear Ham Friends,

It would be a great occation for me to attend the Worlds' Biggest Hamvention at Dayton, Ohio, USA on May 14th to 16th 2004.

Surely on behalf of all the Hams in India I would be inviting all the Hams/SWL out here to visit India, especially for the forthcoming Hamfest India 2004. Anticipate and Wish that Mumbai hams join hand and make it the wonderful, memoriable, well organised event.

de Lion Ajoy - VU2JHM
First Paid delegate of HFI 2004

Life Member of Mumbai Amateur Radio Society MARS.

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

Almost all the students from our batch of 2002 who have cleared their ASOC exams have received their tickets. Some were little unlucky and their tickets were pending due to some missing papers. The wait is finally over...

ABHAY SHAH - VU2AIH

TIRANDAZ IRANI - VU2TPI

ZORBEN ZEND - VU2ZED

ZUTHUN ZEND - VU2ZAR

MRUTYUNJAY HIREMATH - VU2CIK

LABHESH MORE - VU2EGO

MOHAMMED BHANVADWALA - VU2GYM

SACHIN TUPE - VU2EST.

Any students who have cleared in batch 2002 and still have not received his/her ticket may please contact me directly on 98205-27074 ASAP.

More than 60 tickets have been issued to the students of batch 2002, but unfortunately just about 3/4 students have come on air. Many a times I wonder, if all this is worth the efforts put in by MARS ??

Many who are part of Ham Radio Classes are not very convinced to continue any further classes in future.. The inefficiency and lack of interest in new call sign holders is going to cost the future prospective hams..

In fact the batch 2003 students have already suffered, their police enquiry has still not come.. You guys can't even imagine how much follow up is required to move your papers.. Frankly lack of interest by all the new callsign holders and some recent QRM on our E - Group, effected my enthusiasm to push the paper work of our last batches.. resulting into disaster... all the papers have come back to mumbai due to some technical problem and EGO problems between the Mumbai (monitoring Station) and WPC Delhi... Since all the staff has changed so its back to square one..!

The goods news is we are again on track, we have renewed our relations with the WPC and we are coordinating with the new officers to expedite our matter at the earliest, you can see we have cleared all the pending licences.. very soon the enquire will come... But you guys must show some interest.. We are no robots, we cannot keep on working when we get no good

response...

The repeater project is also still pending for the same reason, A lot effort is required, but we wonder if it going to be worth it... will people put them to use.. ??? or are we wasting time and money ???

Anyway I am still optimistic about the future of Ham Radio in Mumbai, Regardless weather I am on the MC or not I will continue to do my pushing so not to worry...

From: Ajoy
Topic: 1717 Message: 1717

Dear Friends of MARS,

The Worlds Biggest Ham Radio Event - DAYTON HAMVENTION May 14th to 16th was a very grand event, I was very lucky to attend this and only other ham I met from VU_land was VU2LID who has W_Land callsign and settled down in USA.

Those who are planning to visit USA or going to be in USA - do note down these dates to attend
54th Dayton Hamvention (R) - May 20th to 22nd, 2005 (also it will be the 75th Dayton Amateur Radio Association's 75th Year !!)

May 19th to 21st, 2006 and May 18th to 20th, 2007 are Future Dayton Hamvention (R) Dates already announced !!!

If someone is interested in knowing the size of this venue - 165000 Sq Ft with 7000 Car parking Space and more than 25 Thousand Hams visiting from all parts of USA and world. Do keep checking the website http://www.hamvention.org

Waiting for Mumbai Boys to put up the dates and webpage for the forthcoming Hamfest India 2004 inviting the DX Hams to visit our country.

Hi! Friends

As always I say good work MARS.

I will be at Mumbai from 24th may to 14th June. Have taken out bit more time to spend with my friends. My XYL still angry for not being able to make it last time ie in Jan.

I look forward to lots of eyeball and simply good fun.

And yes I will be QRV on 2Mts.

To all Martians,

GOOD NEWS TO U ALL,

Had a QSO on 144.200 with VU2 NLF at 10.45 after the Night Owl's Net was over.

He has promised to put on the REPETERS at all the three places i.e; at South Bombay

[NLF's QTH] , North Bombay [KIB'QTH] & Tarangan [Thane] by this Thursday or

at least by this month end . [I am keeping my fingers crossed & hoping for the best]

So with all these three REPETERS coming up all u OM's XYL's & YL's who have

recived their tickets up till now should try u r level best to install u r antennas, procure

u r rigs o r handies & come on AIR as early as possible,if not immediately or as the pains

taken by OM NLF will all go in vain.

Also a request to all the Managing Comittee Members to check in at the

N. O. Net. Two or three per day if not all, At least up till the HAM FEST.

Mumbai Amateur Radio Society

Dear Friends,

The South Mumbai Repeater and the Andheri repeater are up and working. both have been connected back to back, meaning they are interconnected and NOT stand alone, you may access any repeater and work all the stations.

All licenced hams are requested to use the repeater closer to you and not unnessesary try to access the repeater further from you. Use your local repeater. for example you are at Santacruz then you trigger the Andheri repeater and NOT the south Mumbai Repeater. Members in south mumbai may access the Local repeater and NOT the Andheri repeater...

Very Shortly the Thane Repeater will also be up and operational... in the meantime Thane and Mulund Hams may access the repeater best suitable to them (Andheri or South Mumbai) ...

The Repeater freqencies are as follows :-

South Mumbai - 144.100 Mhz + 600Hz (Operational) (LAN)

Andheri - 144.200 Mhz + 600Hz (Operational) (LAN)

Thane - 144.300 Mhz + 600 Hz (Operational by 30/05/2004) (LAN)

Matheran - 144.000 Mhz + 600Hz (Operational by (30/06/2004) (WAN)

Echo Link - 144.500 Simplex. (Operational by 30/07/2004) (DX) .. if there is Demand..!!!!

All Hams are therefore requested NOT to use the 144 Mhz Band for simplex operations.. .....You may use the 145 Mhz band for simplex operations..

These Repeater are for you, make use of them.....

Great job and loud applause for NLF and team.

Yesterday from the lowly rubber duck and a boxed-in QTH (my two-storey building is surrounded by 7-8+ storeyed 'blocks' from all sides and I live on the 1st floor), I triggered the South Mumbai version of the new repeater and I was reading all IZO, MWH, PDN and even one more person very clearly - a landmark considering their QTHs in distance from mine and my poor location. I just had a case of battery failure soon enough.

Congrats again - let the good times last!

NLF this reminds me to joke - I hope you can complete on your own...(else scroll down)

"Knock, Knock!"
"Who's there?"
"Peter"
"Peter who?"
....

Repeater, silly.

1730. Get started the right way on the most popular mode among new ham radio operators

From: VU2UGO
Topic: 1730 Message: 1730

Get started the right way on the most popular mode among new ham radio operators.

By Brian Battles, WS1O

Everyone is new to something. As a licensed Amateur Radio operator, you're probably familiar with (and eager to use) local FM repeaters. Don't grab that mike and start talking just yet, though. Because many hams don't have proficient, seasoned Elmers to help them learn the ropes, we'll try to help you start off on the right foot with this article.

Most radio amateurs don't make a fuss over issues of etiquette and protocol, but hams are protective and proud of the courteous operating procedures that have become standards. You may bump into an occasional ill-mannered character who appears inclined to criticize or ridicule a newcomer, but take it in stride. The most skillful radio amateurs are those who display tolerance and encourage the efforts of newcomers. As with any established pursuit, it's best to avoid the embarrassment of making gross faux pas in public by simply taking the time to learn the customs and practices accepted and expected by more experienced participants.

Getting Acquainted with the Machines

Hams often call a repeater a machine. A repeater is an Amateur Radio station designed to receive signals on one frequency and simultaneously retransmit them on another. Because they receive and transmit on different frequencies, they can do so simultaneously. To use a repeater, you operate your transceiver in the split mode. You listen to the repeater's output frequency and transmit on its input. Because its receiver is separate from its transmitter, a repeater is a duplex device. That means signals go into and out of it at the same time.

Another term you'll hear is simplex, which just means direct, two-way ham-to-ham communication. It's always better to operate simplex than to use a repeater, if possible. The ideal practice is for repeaters to be used only as a secondary means of communicating if your equipment isn't able to maintain direct contact with another station. The agreed-upon national simplex frequencies are 146.52, 223.50, 446.0, 906.5 and 1294.5 MHz.

A repeater is usually located in a high place where it can be easily heard by users over a wide area. The idea is to extend the reach of hand-held and mobile transceivers that normally have limited, line-of-sight range.

To use FM repeaters. you need to know the frequencies of the machines in your area. Local hams can provide information about repeater activity. Check with members of a local club. Ask the Volunteer Examiners who administered your license test. Once you find a repeater to use, resist the urge to transmit immediately. Listen to it for a while and familiarize yourself with its operating procedures and etiquette.

Courtesy is the Key

The key to success on the air is described by one word: Courtesy. There's no other way to explain how hundreds of thousands of ladies and gentlemen can share the same radio frequencies worldwide with a minimum of interference and conflict. An attentive. courteous operator is welcome anywhere. If you keep courtesy at the front of your mind. you'll rarely have difficulty on the air. Before making your first transmission in the world of FM and repeater communication, however, you should also be aware of basic operating techniques. These vary slightly with local custom, but here are some general suggested procedures:

There are no laws or national rules regarding the details of appropriate procedures for seeking a contact on an FM repeater. Depending on your location, different local customs dictate the preferred method to initiate a two-way radio contact via a local machine. In most areas, if the repeater is quiet, press the switch on your mike and transmit your call sign as,WS1O standing by, WSlO listening, WS1O monitoring or simply WS1O. After you stop transmitting, the repeater may send an unmodulated carrier for a couple of seconds to let you know it's working. If anyone is interested in talking to you, they'll call you after your initial transmission. Some repeaters have specific rules for making yourself heard, but usually your call sign is all you need. In a few areas, users may call CQ to initiate a conversation on a repeater, but most hams use the term CQ only on HF or on VHF/UHF simplex frequencies, and don't call CQ on a local FM machine. Ask a ham neighbor (off the air) or listen to the repeater to hear how others do it.

If you want to join a conversation in progress, transmit your call sign between the other stations' transmissions. The station that transmits next should acknowledge you. As with calling CQ, local customs determine appropriate operating procedures. In most areas, don't use the word break to join a routine conversation. In most parts of the country, break usually suggests an emergency and break, break or break, break, break indicates a serious emergency. In any case, all stations should stand by for a station with emergency traffic.

If you want to call a station and the repeater is inactive, simply call the other station. (For example, WB8IMY, this is WS 10. If the repeater is active, but the conversation in progress sounds as though it's about to end, be patient and wait until it's over before calling another station. If the conversation sounds like it's going to continue for a while, transmit your call sign between transmissions. After one of the other hams acknowledges you, politely ask to make a quick call. Usually, the other stations will yield to you. Make your call short. If your friend responds to your call, ask him to move to a simplex frequency or another repeater, or to stand by until the present conversation is over. Thank the other users for letting you interrupt them to place your call.

Likewise, if you're in the midst of a conversation and another ham transmits his call sign between transmissions, the next station in the queue to transmit should acknowledge that station and permit the newcomer to make a call or join the conversation. It's discourteous not to acknowledge him and it's impolite to acknowledge him but not let him speak. You never know; the calling station may need to use the repeater immediately. The other operator may have an emergency on his hands. so let him make a transmission promptly.

Some hams can't keep their thumbs off the push-to-talk (PTT) switch. It's been suggested that this button be renamed Release To Listen (RTL}! A brief pause before you begin each transmission allows other stations to participate in the conversation. Don't key your microphone as soon as someone else releases his. If your exchanges are too quick. you'll block other stations from getting in.

The courtesy beeps on some repeaters compel users to leave spaces between transmissions. The beep sounds a second or two after each transmission to permit new stations to transmit

their call signs in the intervening time period. The conversation may continue only after the beep sounds. If a station is too quick and begins a long transmission before the beep, the repeater may respond to the violation by temporarily shutting down!

Keep each transmission as short as possible. Short transmissions permit more people to use the repeater. All repeaters promote this practice by having timers that time-out, temporarily shutting down the repeater whenever the length of a transmission exceeds the preset time limit. Learn the length of the repeater's timer and stay well within its limits. The length may vary with each repeater; some are as short as 15 seconds and others are as long as three minutes. Some repeaters automatically vary their timer length depending on the amount of traffic on frequency; the heavier the traffic, the shorter the timer.

If two hams try to talk on a repeater at once, the resulting noise is known as a double. If you're in a roundtable conversation. it's easy to lose track of which station is next in line to talk. There's one simple solution to eradicate this problem: Always pass off to another ham by name or call sign. Saying. What do you think, Jennifer? or Go ahead, 'YUA eliminates confusion and avoids doubling. Try to hand off to whoever is next in the queue, although picking out anyone in the roundtable is better than just tossing the repeater up for grabs and inviting chaos.

The key to skillful, courteous FM repeater operation is to be brisk and to the point, and to leave plenty of room for others. Keep it moving. Don't drone; dart in and out. Don't hem and haw or be reluctant to yield the floor. Your turn will come again in a moment. Turn it over, pause for others, get things rolling. Snappy, clearheaded exchanges sound sharp and are more enjoyable for your QSO partners.

Following the Rules

You must communicate your call sign at the end of each transmission or series of transmissions and at least every 10 minutes during the course of a contact. You don't have to transmit the call sign of any other station, including the one you're contacting. Sometimes it's a good idea to identify a bit more often during a long conversation or roundtable chat, so that others can figure out who you are without waiting 10 minutes. It's illegal to transmit without identification. Aside from breaking FCC rules, it's poor operating practice to key your microphone to turn on a repeater without identifying your station. This is called kerchunking the repeater. If you don't want to have a conversation, but simply want to check whether your radio works or if you're able to access a particular repeater, simply say, WSIO testing. This way you accomplish what you want to do legally.

Simplex is a fancy-sounding word for a direct contact on a single frequency. After you've made a contact on a repeater, move the conversation to a simplex frequency, if possible. The function of a repeater is to provide communications between stations not able to communicate directly because of terrain or equipment limitations. If stations are able to communicate without a repeater, they shouldn't use a repeater. Always use simplex whenever possible so that the repeater will be available for stations that need its facilities. Simplex communication offers a degree of privacy impossible to achieve on a repeater. There's also no timer to worry about or courtesy beep to wait for. When selecting a frequency, make sure it's designated for FM simplex operation. There are frequencies specifically set aside for simplex. To help you choose an appropriate frequency, consult the complete list in The ARRL Repeater Director, an indispensable book for VHF/UHF operators. If you select a simplex frequency indiscriminately, you may interfere with other repeaters or stations operating in other modes (and you may not be aware of it).

Repeater facilities must not be used for the broadcasting of information of interest to the general public. If a repeater can transmit information of interest to the general public, such as weather reports, those transmissions must occur only when requested by a licensed amateur and must not conform to a specific time schedule. The retransmission of radio signals from other services is not permitted in the amateur service except with special permission, as specified in Part 97.113(e). (For example, you can retransmit a NOAA weather broadcast under certain circumstances.) The retransmission of taped material from other sources is permitted. You could play back a tape recording of a friend reading instructions for wiring a TNC, provided you follow accepted amateur practices and identify your station appropriately. The idea is that an amateur station is not a broadcasting facility and its intended audience is other licensed amateur stations, not the general public.

Support Your Local Repeater

How often do you stop to think of what goes into the machine you conveniently use any time, 24 hours a day, 365 days a year? It takes time, money, knowledge and energy to operate a reliable repeater system. Nobody should feel compelled to join any group, and you can use thousands of repeaters across the US without joining any clubs. If you frequent a system, however, or just want to contribute to the cost of its upkeep so it can be counted on in an emergency, support your local repeater.

Make it a habit to run your transceiver on a low-power setting. There's usually no need to pump out heavy watts on VHF or UHF FM if you're within a reasonable range of a repeater or other station operating simplex. High power can also interfere with distant repeaters on the same frequency.

Helpful Tips

a.. Inspect your station regularly for loose connections, broken wires, antenna problems, intermittent grounds and other potential weak spots. Mobile installations are most prone to wear and damage. Using minimum power is not only a courtesy to the distant repeaters, but an FCC requirement.
b.. The following guidelines are worth remembering to help promote efficient communication
DOs
a.. Speak clearly and don't key or unkey your microphone as you start or finish talking. Give your rig and the repeater a moment to come on. This ensures that listeners won't miss any part of your transmission. Repeated transmissions take up unnecessary air time.
b.. If the repeater has a courtesy tone, wait until you hear it before transmitting. This allows time for other stations to break in if necessary, and allow the system to reset. If you don't hear a courtesy tone, wait 2-3 seconds after the previous user has finished before making a transmission.
c.. If you hear a jammer, ignore him. Resist the temptation to set the jammer straight. Don 't acknowledge his presence in any way. Anything you might say about it probably doesn't belong on the band and may contribute to the problem. If the jammer has no audience, he won't have any fun and will soon be gone. If repeater jamming becomes a persistent problem, get in touch with your ARRL Section Official Observer Coordinator (OOC) to ask for advice. You can find out who your OOC is by reading the Section News column in QST, or by contacting your Section Manager (SM). You'll find your SM's address and telephone number in any recent QST or you can call ARRL Headquarters.
d.. Repeater traffic priorities: 1) Emergency and priority. 2) System test or maintenance transmissions by control operators or system owners. 3) Public service. 4) Fixed (base) stations should ensure that mobile and portable stations have priority, especially at 6-8

AM and 4-6 PM. The weekday commute hours are the only time many hams can get on the air. 5) Fixed (base) station communications.
e.. Follow the FCC's requirement to identify your station once every 10 minutes and at the end of a QSO. But don't over identify by sending your call sign after every transmission.
f.. Ask somebody for a signal report if you're using a hand-held transceiver with a rubber ducky antenna. Little rigs can't always capture the repeater's receiver adequately. The excessive noise of partial quieting made by weak signals may make your transmissions uncopiable and is irritating to those who monitor for extended periods.
g.. There are always other operators and people with scanners listening. Don't say anything that should be private, and do your best to sound friendly, professional and courteous.
DON'Ts:

a.. Don't use radio jargon. Talk as you would over the telephone. Listen and learn from the examples of experienced users. Don't say things like QSL, Roger that, 10-4, What's your QTH? and The handle here is.... Such terminology is often a misused habit carried over from HF, Citizens Band or public safety services, and on Amateur Radio repeaters it confuses more than it communicates. There are probably hundreds of other hams listening to the machine and nonhams monitoring with scanners. You may not hear them, but they hear you. Ensure that they get the best impression of your operating skill and of the Amateur Radio service.
b.. Don't break an ongoing conversation unless you have emergency or priority traffic or something valuable to add.
c.. Don't use the repeater to shoot the breeze endlessly with a local station. Make your contact and move to a simplex frequency. The system is designed for mobile and long-distance QSOs, not for local ragchewing.
d.. Don't drag out a conversation longer than necessary. Allow others to use and enjoy the system. Limit your ragchews to a reasonable length, especially during commuting hours.
e.. Don't use excessive or insufficient microphone gain. Your transceiver's microphone input circuitry is technically advanced, but it isn't fool proof. Distorted voices and background noise make it difficult to carry on an enjoyable contact. Speak across, rather than directly into, the mike element and talk at a reasonable volume level. Nothing's more frustrating than operating a mobile station and trying to copy someone who mumbles. It's also irritating to have one person in a roundtable whose voice is extraordinarily loud. If in doubt, ask other users for an audio report.
f.. Don't think out loud. If you have nothing to say, release the push-to-talk button. If you forget what you were going to say next, drop it.

Operating VHF and UHF FM, on simplex or via repeaters, is a pleasure almost every ham has experienced. Don't be in so much of a hurry to get on the air that you forget the basics. Aside from the tips and suggestions covered here, there's another important element: You must know your equipment thoroughly. If you just acquired a transceiver, read the owner's manual before you start pushing buttons. Learn how to tune it, what the buttons and knobs do and how to tell if you're on the right frequency. If you have a brand-new rig, it may take you some time to learn what all the dozens of functions are for and how they work, but it's worthwhile to learn. If something is unclear, ask a more experienced ham, or contact the dealer or manufacturer.

Although serious technical problems are uncommon on the air, most of them are caused because a ham doesn't know the proper way to operate or maintain his radio gear. You don't have to be able to disassemble a hand-held transceiver in the dark using only tweezers and a safety pin. Most new radios are masterpieces of miniaturization. Even the equipment needed to test and check out the newest gear isn't on most hams' workbenches. You do,

however, need to know how to keep the batteries charged, how to change frequencies, switch between simplex and duplex (for repeaters), set the output power level, adjust the volume and squelch, program the memories and even how far or close your mouth should be to the microphone.

It might seem like a lot of homework to do before you start operating, but it's worth it. Consider it the final element of your license exam, the real life portion! If you take the time to listen, get to know the proper etiquette and operating procedures, and make yourself familiar with your equipment first, your on-the-air debut should be the thrill you've been expecting.

Because you worked to earn your amateur license, you'll want to preserve the privileges you've earned. The best way to do so is to take care to operate in a professional manner and show others that you respect the high standards of the Amateur Radio service. As a ham, you've become a member of one of the proudest and most exciting services in the world. It's a hobby you can enjoy for the rest of your life, and share with your family and friends. When you use the information you've learned here to operate on FM and repeaters, you'll meet many hams who may become close friends. The best thing you can do for your friends is treat them as you'd like them to treat you: with courtesy, consideration and respect. And in this case, that means to do your best to be a top-notch radio operator as a service to your community and to help preserve the proud tradition of Amateur Radio.

CHAPTER 1 - INTRODUCTION

Good Golly Miss Molly, what's this all about?
One might hear “N4ZZZ this is K6XXX, Good morning OM, welcome to San Diego. Handle here is Jack, -- Juliet Alpha Charlie Kilo, QTH is El Cajon. You’re not quite full quieting into the machine, about 20% path noise. Your deviation is fine. This repeater W6NWG Whiskey Six Nothing Works Good is located on Mount Palomar. The repeater gets very busy during commute hours so let’s QSY to 146.075, plus offset with a PL of 107.2, QSL”. This is followed by a beep, a quiet period, then the repeater drops off the air. Good Golly Miss Molly, what's this all about? We will cover all this jargon and terminology throughout the book, but here are quick answers so you don’t have to flip through the Chapters.

CHAPTER 2 - YOUR FIRST VHF/UHF Radio

Typically the new licensee purchases a Handi-Talkie (HT) for VHF/UHF, but later find they are using their first radio mostly in a mobile or at a home base station. A mobile rig can be easily switched back and forth between the vehicle and a base location and offers considerable advantages over an HT. Keep in mind that the VHF/UHF radios are for the most part line of sight transmission and reception; however, repeaters can extend the range considerably. HF is the spectrum for long-range skip communications.

This is not to bad-mouth the HTs, they are great for carrying in your shirt pocket or belt clip for pedestrian use, public relations activities, and traveling light. Just be aware of their limitations and intended use. They certainly can be used for base and mobile applications, but better antennas and DC power sources are definitely something to consider when you settle in on an HT.

CHAPTER 3 - OPERATING SIMPLEX

The communication range between Amateur VHF/UHF FM mobile and hand held radios at ground level, operating simplex (direct) is about five to fifteen miles for mobiles, and just a couple of miles for hand held transceivers. The range depends on the band of operation, transmitter powers, antenna heights, obstructions, antenna gains and receiver sensitivity or noise figures. Essentially it is line of sight.

CHAPTER 4 - HOW REPEATERS WORK

Half duplex (Semi Duplex) - a communications mode in which a radio transmits and receives on two different frequencies but performs only one of these operations at any given time. In half duplex, only one station can talk at a time. Your VHF or UHF radio is operating half duplex when set up for standard repeater use. Example you transmit on 146.13 MHz (can't hear the other station while transmitting). Then you listen on 146.73 as the other

station transmits. Your radio automatically transmits on 146.13 MHz when you press the PTT switch and reverts back to 146.73 MHz to listen when you release the PTT.

CTCSS Continuously Tone Coded Squelch System, also known as Subaudible Tone and "PL" (Private-Line, a Motorola trade name). Commonly used for repeater access. These are specific frequencies between 67 and 254.1 Hz. Hereafter referred to as PL for shortness and common use. PL has encode and decode functions. Encode sends PL to the repeater. Decode is set in your receiver to detect the PL from the repeater - see Tone Squelch below. PL frequencies and corresponding ICOM and Motorola numbers are given at the end of this chapter. In Amateur Radio, many repeaters require users to send the correct PL tone continuously to use the repeater. In fact, some coordinating groups insist on Pled repeaters. This may mean the repeater is "closed," for use only by members, or it may simply be used to avoid being keyed up by users of another repeater on the same frequency pair. Usually PL is required for phone patching.

CHAPTER 5 - PROGRAMMING

Four ways to program an HT, Base, or Mobile Rig:

1. Using the manual -- usually the sequence is scattered throughout the manual. Have fun. Boggles many a mind. But programming some rigs are more intuitive than others.

2. Read the manual thoroughly and make up your own cheat sheet. Step by step instructions made by you to be used by you.

3. Get a programming cable and software for your rig. Now you can easily enter all functions in your computer then upload to the rig. This really simplifies the process.

4. Buy a Programming guide - a cheat sheet pre-made for your model rig. See N6FN Nifty Accessories - URL: http://niftyaccessories.com/

Maybe best to walk before you run. First tackle the easy one, program a simplex channel. Then try programming a non-Pled repeater. Next, program in a Pled repeater. Then a Pled repeater with tone squelch. For a simplex channel, first determine how to access the VFO and put in the desired frequency. Next, find the information for offset. Check that the offset is neither plus or minus, i.e., it is in simplex, then memory write all.

For a Pled Repeater, invoke the VFO mode and enter the repeater output frequency, set the offset value (e.g., 600 kHz) plus or minus as required. Next enter the tone frequency, tone activation, then memory write all. Many beginners enter the tone frequency, but forget to activate the tone. See Chapter 4 for definitions of VFO, offset, PL, etc. Here is HT programming for a popular model, the ICOM IC-T2H.

CHAPTER 6 -ANTENNAS, POWER SOURCES, VSWR, AND DECIBELS

ANTENNAS: Tests show the rubber duck has about minus 5db gain (see decibels below) compared to a quarter wave antenna held at shoulder height. In terms of effective radiated power (ERP), a 5-Watt HT with a rubber duck antenna, held at shoulder height radiates an effective power of about 1.5 watts. Placing the HT on your belt could attenuate the signal another 20db, reducing ERP to only 15 milliwatts! UHF results were even worse.

VSWR: Modern solid state radios hate high VSWRs and you must check the VSWR when installing antennas. VSWR is an indication of forward and reflected power. Reflected power is undesirable and results from a mismatch in impedance between the transmitter and the antenna. If the antenna is too long, it will resonate at a lower frequency than desired, conversely if the antenna is too short, it will resonate at a higher frequency than desired, analogy - like short and long guitar strings.

DECIBELS: The decibel (1/10 Bel) or dB, is a means of expressing the gain of an active device (such as an amplifier) or the loss in a passive device (such as an attenuator or length of cable). It is simply the ratio of output to input expressed in logarithmic form. It is also used to express the gain of an antenna relative to a reference antenna. Without getting too far into the math, here are some handy easy to remember rules of thumb. Sealed Lead Acid (SLA). These batteries use the same technology as your car battery. They are relatively inexpensive, and provide 200-500 recharge cycles depending on usage. SLA battery packs give high capacity but are fairly heavy, and are more sensitive to temperature and deep discharge/overcharge than other batteries. SLA batteries should be stored in their charged state as leaving them uncharged for long periods can cause permanent damage. Some very high capacity battery packs are available and can be easily adapted to Amateur transceivers - such as a 6 amp-hour battery used for car models.

POWER SUPPLIES: A mobile or an HT can be operated in a base situation by using a DC power supply to convert 117VAC to the level required by the radio. Many are available with a 12VDC output to directly power a mobile radio. Powering an HT from a 12-Volt supply will require building a regulator circuit to achieve the proper voltage. Be sure and check your manual for the maximum voltage input and current requirements.

CHAPTER 7 - USING REPEATERS

If the repeater is quiet, key your transmitter and announce "AC6V listening", this is short hand for "AC6V listening for any call". Or “AC6V listening - anyone on frequency?" Some just announce simply "AC6V". Others give an idea of their situation - "AC6V Mobile", "AC6V Maritime Mobile". Although not as common today, "AC6V monitoring" was at one time used by control operators and in some areas may still be the case, but this seems to have given way to where monitoring and listening are now synonymous.

Don't call CQ on repeaters (HF Band Stuff) -- many VHFers don't savvy it and just isn't used on FM repeaters (on VHF SSB OR CW - Yes). If you insist on calling CQ on a repeater, it is not against the rules – but 16 old time VHF hams will come back to you with the lecture “We don’t use CQ on repeaters”.

CHAPTER 8 - PHONETICS, Q-SIGNALS, CALLSIGNS

PHONETICS: The recommended phonetics for Amateur Radio use is the ITU phonetic alphabet. These are generally understood by hams in all countries on all bands of operation. See Table of ITU Phonetics. These are a must for emergency use and should be used for routine communications as well.

Some folks use DXing phonetics -- such as King Six Japan Norway instead of Kilo Six Juliet November. This is common on HF but not on VHF/UHF. Others use police phonetics, King Six Adam Mary, but both DX and police phonetics best not be used on VHF/UHF as many are not

familiar with them. And still others use cutie phonetics, Karl Six Always Killing Time; these make a person's callsign easy to remember and are often used.

Q-SIGNALS: Expert Ham CW ops use upwards of 50 Q signals, but only 9 of them are common on VHF/UHF FM repeaters. Other Q-Signals are discouraged only because many repeater users have no idea what they mean. QTR -- What ?? (Just ask for the time!) Use of 10 codes are also discouraged for the same reason. What's your 10-84 --- huh? (Just ask for their phone number!). And 10 codes smack of CB lingo.

QSO
Can you communicate with ... direct or by relay?
I can communicate with ... direct (or by relay through ...)
Common Usage -- A 2-Way Contact, a conversation.

CALLSIGNS: There was a time when you could tell where a Ham was residing by their district number. But this was changed to allow Hams to keep their callsign when they relocated. In the USA, the time is long past that you can tell where a USA ham resides. You can have a W2 call (NY & NJ) and live in California (W6). Following are the USA District numbers and states.

CHAPTER 9 - FUNNY NOISES ON THE REPEATER. MYTHS

CAPTURING: If two stations are transmitting at the same time (doubling) on the same frequency – it creates problems. If the two stations are about equal in strength to the repeater, both may be heard, typically with a heterodyne or beat note. When one of the stations is stronger than the other, the stronger station "captures" the weaker one and the strong guy wins. This is in contrast to AM or SSB where both may be heard. So if you have a weak signal and double with a strong station, you will not be heard!

DEVIATION: Often heard is “I'll raise power so I'll be louder”. Since repeaters are frequency modulation not AM or SSB, as long as your signal has engaged the repeater limiters (full quieting), an increase in power will not make you louder, since the audio is proportional to the FM deviation (swing) and not amplitude. It may help get rid of path noise. Another is “I’m near the repeater, so that’s why I am so loud”. Nope – as long as you are full quieting – distance doesn’t affect volume.

CHAPTER 10 - COPS AND JAMMERS

If a jammer appears or some one not identifying, swearing, throwing carriers, etc --- DON'T acknowledge them, they are looking for attention -- don't give it to them. IGNORE IGNORE is the drill. It doesn't happen often, but it does happen -- it's a big world out there, and there are some nuts. Some of them find a Ham Radio now and then, and discover the delight of offending an audience and the power of holding down the PTT key. The key word here is audience, they are seeking to disrupt and get into a bru-ha ha.

CHAPTER 11 - INSIDE A REPEATER

A key factor in keeping the transmit energy out of the receiver is a duplexer which allows the repeater to operate on a common antenna and transmit and receive simultaneously on fairly close frequencies. Several types are in use, but a typically one is a notch duplexer. Notch duplexers are large cavity type filters with very high Q and narrow bandwidth to the two frequencies involved and use tunable notches.

Assume that we modulate with a constant 1000-Hertz pure sine wave with the amplitude near the maximum allowed in repeater systems, then the RF signal would swing back and between 146.126 and 146.134 MHz at a 1000-Hertz rate. The carrier frequency increases during the positive cycle of the modulating signal and decreases during the negative portion. The difference between 146.126 and 146.134 MHz is +/- 4 kHz and is termed deviation. The modulating frequency could well be a PL tone e.g., 107.2 Hertz. but with less amplitude hence less deviation, typically +/- 500 Hz.

This deviation is proportional to the AMPLITUDE of the modulating signal. Note that this does not affect the AMPLITUDE of the transmitted FM signal – only its frequency. When you speak softly the deviation is low, conversely shouting will increase deviation. If the radio is misadjusted or you shout too loud – the system deviation limits are exceeded and may result in distortion. In Amateur Radio FM radios, the maximum deviation is typically +/- 4.5 kHz. Deviation limits for CTCSS tones are typically +/- 500 Hz.

CHAPTER 12 - CROSS BAND REPEATING, IRLP, ECHOLINK

Cross band repeating (CBR) is a feature with some VHF-UHF dual band radios that simply repeats what it receives on one band and automatically retransmit it on the another band. This might be used when hiking or camping. Your vehicle is on a hill and you are in a valley below. You can take an HT with you and transceive to your mobile radio which will amplify and cross band repeat to a repeater or other users. Some HTs can control the mobile rig allowing frequency changes and voice feedback of the changes. Several configurations can be used; Simplex-To-Simplex CBR, Simplex-To-Repeater CBR, One-Way-CBR, and various modes of duplexing, simplex, half, full, etc. Be sure to read the FCC rules regarding cross band repeating. See Part 97.119 (a) Identification; Part 97.201 Auxiliary Stations.
VoIp: Ham voice internet connections are a recent introduction and are great for everyone, but especially those that cannot get on HF. They use a network protocol called VoIP (Voice over IP). These allow Amateurs to contact other Amateurs worldwide. Currently, modes are IRLP, ILINK, ECHOLINK, and WIRES IITM. We will discuss the three most popular modes, IRLP, EchoLink, and WIRES IITM

GLOSSARY
base loading - A loading coil at the bottom of an antenna to achieve a lower resonant frequency.

beam - an antenna that gives a directional beam pattern. See Yagi. Page 6-1.

bleed over- Interference caused by a station operating on an adjacent channel

BNC - Coax connector commonly used with VHF/UHF equipment -- Bayonet Niell-Concelman (standard connector type used on COAX cable, named for its inventors).

boat anchor - antique ham equipment -- So named because of weight and size.

bootlegger - Someone, usually not a Ham but a wannabe, making up a callsign, one usually not in the callbook, and getting on the air. Sometimes it is someone who already bought a radio, took the test and flunked, and then gets on the air anyway. Page 10-2.

break - (Repeater Term) used to interrupt a conversation on a repeater to indicate that there is an emergency or urgent message. If non-urgent, simply interject your callsign. Page 7-8.

break break (Repeater Term) used to intercede in an existing conversation with emergency communications. Page 7-8.

brick, a power amplifier used for VHF/UHF systems. Page 6-4.

HAMFEST INDIA 2004

Dear Members,

The next Hamfest meeting will be held on 6th June 2004 at 10:00 AM at B.S.Bengelle Girls School. All team members are requested to attend on time.

This is the last and final call for members you are interested to part of Hamfest Team and have not registered themselves with me. In order to hold a succesful Hamfest a lot of disipline and commitment will be required, hence all the things have to be planned well in advance, We therefore cannot have people joining us at any time they wish.. So this is your last chance to join us and be part of this one in a life time event, as I seriously don't know if ever and when we will again host Hamfest again...

Please note all the future correspondence related to Hamfest India 2004 will be done on hamfest_India_2004@yahoogroups.com . Only periodic updates will be posted on our other groups..

Topic: 1745 Message: 1745

Home (http://www.strongsignals.net/)
Contents (http://www.strongsignals.net/access/contents.html)

Introduction
Having been sucked into the computer aided world of scanning, I figured I'd gather some relevant data on the subject and put it into one spot for easy access. Also listed are other titles used for other tasks beside radio control.
Since I own about a dozen of these programs, I'll gradually get around to offering up my opinions on them after I've had some time to get acquainted with them.
One important reminder...prices, features and supported equipment can change at any time. Be sure to visit any associated web pages to get the latest details!
Be sure to look at the items marked NEW or UPDATED; these are recent additions since the last edition of this page. Links that are in BROWN are links to files that are in .zip or .exe format.
If you can't find the software you're looking for, try these 2 places:
- The Yahoo mailing lists. Tips and sometimes even whole programs are stored in the associated files area. As such, in many cases, you must join that group (generally a painless procedure) to get access to their files. You can find a selection of mailing lists here:
- Trunking Scanners (http://www.strongsignals.net/access/content/trunkscan.html#LINKS)
- Conventional Scanners (http://henney.com/chm/links/scanners.htm#MAIL)

- Also try the DX Zone (http://www.dxzone.com/catalog/Software/Radio_Control/), where numerous radio, ham and scanner control programs are cataloged.

If you are looking for FCC databases (http://www.strongsignals.net/access/content/fccfreqdb.html), you can access that page by using the provided link.
This page was last updated in May 2004. Thank you and enjoy!
Thank You
Let me add my personal thanks to Mike Agner, KA3JJZ, who has volunteered to keep this page up to date!

Available products on this page have been broken down into the following categories:
- Digital Trunking Scanner Support (http://www.strongsignals.net/access/content/software.html#DSOFT)
- Trunking Scanner Support Software (http://www.strongsignals.net/access/content/software.html#TSOFT)
- Dedicated Scanner Software (http://www.strongsignals.net/access/content/software.html#DEDICATE)

- tk10 (http://parnass.com/tk10/) (Icom IC-R10)

- tk8500 (http://parnass.org/tk8500/) (Icom IC-R8500)

- tk120 (http://parnass.org/tk120/) (Yaesu VR-120)

- tk150 (http://parnass.org/tk150/) (Yaesu VR-150)

- tk500 (http://parnass.org/tk500/) (Yaesu VR-500)
BuTel Software (http://www.butel.nl/)
- Support For: AOR AR5000/8200/8600, Icom IC-R2/R3

- The Yahoo mailing list for other Butel software can be found here
(http://groups.yahoo.com/group/arcsoftware/)
COM101 (http://home.hvc.rr.com/bpetrow/COM101.ZIP)

- DOS Cloning Software for BC245XLT/SC200/BC780XLT

- NOTE: The home page for these packages can be found here
(http://home.hvc.rr.com/bpetrow/)
Deltacomm (http://www.rfsignals.com/)
- Supports: Icom IC-R7000/R7100/R8500/R9000 and some Icom Ham transceivers
Goran Vlaski's Digital Laboratory (http://www.digital-laboratory.de/)
- Links for software for AOR AR8000/8200, Radio Manager (which see),
- DJ-X10SW (which see), Icom IC-R2/R3 and several ham handhelds
Hamsoft Rig Control Programs (http://radio.linux.org.au/?sectpat=rigcontrol&ordpat=title)
- Linux links and downloads for AOR8000/8200, BC780XLT, Icom IC-PCR1000,
- Winradio, BC895XLT, BC245XLT, and some ham transceivers
ITS Software (http://www.itssoftware.net/index2.html)

- Supports: Uniden SC200, RadioShack PRO-89
- The Yahoo mailing list for this software can be found here
(http://groups.yahoo.com/group/ezscan/)
KC8UNJ Programming Software (http://www.qsl.net/kc8unj/)

- Supports: Icom R-2, Yaesu VR-120, some Ham HTs
PCScan (http://www.micosyen.com/radio.htm)
- Supports: AOR AR8000/AR3000A/AR5000, Icom IC-PCR100/PCR1000/R9000,
- Optoelectronics OptoCom (Note: no DTMF Decode with AOR5000)
Programmit (http://www.qsl.net/ka2pyj/index.html)
- Supports: AOR AR1000 series
- Supports: RadioShack PRO-2004/2005/2006/2011/2026/2035/2041/2042/64
Pro-Link (http://www.glyff.net/software/prolink/)

- Supports: RadioShack PRO-64, PRO-76, PRO-79, PRO-82, PRO-89, PRO-2016, PRO-2017,
PRO-2041
- A mailing list for this software can be found here
(http://www.glyff.net/phpBB2/index.php?c=3)
Pro-Turbo (http://www3.sympatico.ca/len.c/)
- Supports: RadioShack PRO-2004/2005/2006 with HB/CE-232 Interface
RadioMax (http://www.datadeliverydevices.com/RadioMax.htm)

- Supports: AOR AR2700/3000/3000A/3030/5000/9000, any Kenwood,
Drake R8/R8A, Icom IC-R10/R72/R7000/R7100/R8500/R9000,

Lowe HF-150, Optoelectronics OS456/535, Optolinx interfaces,
Uniden BC895XLT, several Icom HF transceivers
- A review of this software can be found here
(http://www.datadeliverydevices.com/MTRevue.htm)

- The Strong Signals review can be found here
(http://www.strongsignals.net/access/feature/review_010.html)
Radio Control (http://www.radioctl.com/english/index.html) NEW

- Supported radios are listed here (http://www.radioctl.com/english/devices.html)
Radio Manager (http://www.bensware.com/rm.htm) UPDATED

- Supports: Uniden BC245XLT/BC895XLT, AOR AR8200, RadioShack PRO-64/2041,
- Optoelectonics DC-442, Scout, Optoscan, Xplorer, Optocom,
- Icom IC-R7000/7100/9000 and other CI-V protocol radios
Radio Shack Software Page (http://support.radioshack.com/soft.htm)
Scancat Gold (DOS) (http://www.scancat.com/scangold.html)
Scannerware Soft Control 2.0 (http://www.durhamradio.ca/scanwear.htm)

- Supports: OptoScan 456 with RadioShack PRO-2005/2006, AOR 3000/3000A, AOR 8000,
- OptoScan 535 with RadioShack PRO-2035/42, Icom IC-R7000/R7100/R9000
- Note: Version 2.5 is available from the Icom IC-R10
(http://groups.yahoo.com/group/Icom_R-10/) Yahoo group
ScanPro Software
- BC245XLT (http://www.bc245xlt.com/)
- Read a review of this software here

The interview with God.

I dreamed I had an interview with God.

?So you would like to interview me?? God asked.

?If you have the time? I said.

God smiled. ?My time is eternity.?
?What questions do you have in mind for me??

?What surprises you most about humankind??

God answered...
?That they get bored with childhood,
they rush to grow up, and then
long to be children again.?

?That they lose their health to make money...
and then lose their money to restore their health.?

?That by thinking anxiously about the future,
they forget the present,
such that they live in neither
the present nor the future.?

"That they live as if they will never die,
and die as though they had never lived.?

God?s hand took mine
and we were silent for a while.

And then I asked...
?As a parent, what are some of life?s lessons
you want your children to learn??

?To learn they cannot make anyone
love them. All they can do
is let themselves be loved.?

?To learn that it is not good
to compare themselves to others.?

?To learn to forgive
by practicing forgiveness.?

?To learn that it only takes a few seconds
to open profound wounds in those they love,
and it can take many years to heal them.?

?To learn that a rich person
is not one who has the most,
but is one who needs the least.?

?To learn that there are people
who love them dearly,
but simply have not yet learned
how to express or show their feelings.?

?To learn that two people can
look at the same thing
and see it differently.?

?To learn that it is not enough that they forgive one another, but they must also forgive themselves.?

"Thank you for your time," I said humbly.
"Is there anything else
you would like your children to know?"

God smiled and said,
?Just know that I am here... always....

Dear Martians Let's make Mars Hamfest an Emperor Size that even for years Hamfest 2004 is remembered as an hams dream come true.

Installing Love

Customer Service: Can you install Love?

Customer: I can do that. I?m not very technical, but I think I?m ready to install now. What do I do first?

Service: The first step is to open your Heart. Have you located your Heart?

Customer: Yes, I have, but there are several programs running right now. Is it okay to install while they are running?

Service: What programs are running?

Customer: Let me see? I have Pasthurt.exe, Lowesteem.exe, Grudge.exe and Resentment.com running right now.

Service: No problem. Love will automatically erase Pasthurt.exe from your current operating system. It may remain in your permanent memory, but it will no longer disrupt other programs. Love will eventually overwrite Lowesteem.exe whit a module of its own, called Highesteem.exe. However, you have to completely turn off Grudge.exe and Resentment.com. Those programs prevent Love from being properly installed.
Can you turn those off?

Customer: I don?t know how to turn them off. Can you tell me how?

Service: My pleasure. Go to your Start menu and invoke Forgiveness.exe. Do this as many times as necessary until Grudge.exe and Resentment.com have been completely erased.

Customer: Okay, I?m done. Love has started installing itself automatically. Is that normal?

Service: Yes it is. You should receive a message that says it will reinstall for the life of your Heart. Do you see that message?

Customer: Yes I do. Is it completely installed?

Service: Yes, but remember that you have only the base program. You need to begin connecting to other Hearts to get the upgrades.

Customer: Oops? I have an error message already. What should I do?

Service: What does the message say?

Customer: It says ?Error 412 ? Program not run on internal components.?
What does that mean?

Service: Don?t worry, that?s a common problem. It means that the Love program is set up to run on external Hearts but has not yet been running on your Heart. It is one of those complicated programming things, but in non-technical terms it means that you have to ?love?

your own machine before it can ?love? others.

Customer: So what should I do?

Service: Can you find the directory called ?Self-acceptance??

Customer: Yes, I have it.

Service: Excellent, you are getting good at this.

Customer: Thank you.

Service: You?re welcome. Click on the following files and then copy them to the ?Myheart? directory: Forgiveself.doc, Selfesteem.txt, Realizeworth.txt and Goodness.doc. The system will overwrite conflicting files and begin patching any faulty programming. Also, you need to delete ?Selfcriticize.exe? from all directories, and then empty your recycle bin afterwards to make sure it is completely gone and never comes back.

Customer: Got it! Wow! My Heart is filling up with really neat files. Smile.mpg is playing on my monitor right now, and it shows that Warmth.com, Peace.exe and Contentment.com are copying themselves all over my Heart!

Service: Then Love is installed and running. You should be able to handle it from here. One more thing before I go?

Customer: Yes?

Service: Love is freeware. Be sure to give it and its various modules to everybody you are meeting. They will in turn share it with other people, and they will return some really neat modules back to you.

Customer: I will. Thank you for your help.

Service: You?re very welcome.

Dear Friends,

Firstly, let me inform you that all those 15 Members who have booked their Green Birds (2M Base) will very soon get their base stations as New Black Birds.. as VU3WJM has fixed half of them already and by this weekend almost all of them will be up and working...

Second, All members interested in these green birds (2M base - 20 W) can get them in working condition for just Rs.1500/- Happy ??? there is more.....

You can now have a indigenious (Rahul - VU3WJM from Lucknow) HF monoband (20M - 10W) with built in power supply for Rs.2000/- Yes that's right (Two Thousand only) all you will need is a 20 meter dipole and some co-ax and you can start communicating with the whole world... depending on you location, but me tell you with 10 Watt you should be able to work whole of ASIA if not more.... ofcourse you can always use a RF Amp for more juice...

Guys, on a personal note, You can't deals better than this, so grab these rigs and get on air ASAP...

Also I am selling my Compaq Laptop, I would be happy if any of our Disaster Teams member would like to have it, that way it would be very useful for our Scramble Team...

All members interested in get any of the above equipment may call upon me on 98205-47074, offer open till stock lasts.....

Three cheers for VU3WJM.....!!!!

From: Rahul Srivastava
Topic: 1756 Message: 1756

Hi! Friends,

It is always a pleasure to meet dedicated HAMs. For MARS all I can say, Good people and good active HAMs.

I am at Mumbai spending summer vacation. With these sets going I can now say they have been fruitful.

I would like to express my gratitude to Nilesh and Sandeep who have been tirelessly shuttling these sets to my QTH at Borivili at the same time making available all the components required to get these sets going.

Seeing all the mails all I can say I am deeply touched and hope this small contribution will see many Martians on air.

73

Rahul VU3WJM

PS: Lately I have been approached by a group of HAMs to provide them with ready to operate HF sets based on one of my earlier designs. I will be getting them ready soon and of course they will be available to my MARs friends.

Rahul Srivastava <vu3wjm@...> wrote:
Hi! Friends,

It is always a pleasure to meet dedicated HAMs. For MARS all I can say, Good people and good active HAMs.

I am at Mumbai spending summer vacation. With these sets going I can now say they have been fruitful.

I would like to express my gratitude to Nilesh and Sandeep who have been tirelessly shuttling these sets to my QTH at Borivili at the same time making available all the components required to get these sets going.

Seeing all the mails all I can say I am deeply touched and hope this small contribution will see many Martians on air.

Dear NLF

First of all thanks for bringing green/black bird alive.

I have already booked for 2 nos. - 1 for vu2gbi & 2nd for vu2hbn.

Their antenna is already up. Hope to bring them on air soon.

1759. remote repeater control using password ...attn Anurag

Yahoo group: m_a_r_s
Date: 2004-06-09 12:31:27 UTC
From: Ankur Puranik
Topic: 1759 Message: 1759

Dear Anurag,

the circuit you were looking for remote repeater control using DTMF with password control has appeared in the EFY magazine of this month.

The entire explaination of the circuitary with part list and the pcb layout is given. You can control upto 9 devices connected to the rx end, with a 4 digit password. (incase of repeater 9 functions)

IMP: You will have to replace the given tx with our 2m tx or handy with DTMF input. Your can use a mobile phone or conventional telephone to enter DTMF tone in the transmitter, need not make a DTMF encoder. (you know the trick....speaker of the phone held near the mic of the handy will transmit DTMF effectively, as it is based on Audio Freq. and the rx end circuitary to be connected to the rx at the repeater end. (remember repeater rx has to remain on all the time , and u cannot shut the repeater rx.)

Have a look at page no 57 of EFY JUNE 2004.

incase u cannot get the mag let me know. I shall scan the doc and send it to you.

all d best

1761. Monthly Meeting

Yahoo group: m_a_r_s
Date: 2004-06-11 05:43:13 UTC
From: Huzefa Merchant VU2HIT
Topic: 191 Message: 1761

Hello Friends,
This is a reminder to all Members Committed (on the Air / off the Air), about our Club ie MARS monthly meeting which is by default on Every Second Sunday at Bai Bengali Girls Schools Churchgate at 10:00 AM.

The meeting for the month of June 2004 will be conducted as per details mentioned above. Agenda for the meeting as such is discussions for Activities to be conducted for the year 2004 - 05.

Request to all members that not only to be present for the meeting, but also to be interactive with the Managing Committee. Members are welcome to give presentations / suggestions as to what the club activities should include alongwith the default activities like Ganpati Visarjan, JOTA, Fox Hunt, Scramble Team etc.

Note : that all the activities will be carried out only on the amount of Participation & Commitment shown by all members whether Student or Odinary. All members are requested further, to Correspond to the Managing Committee either via the E - Group or by Telephone, regarding any matter of concern to them.

Remember that your participation will be the highway by which MARS will prosper, collect more funds & even make the HAM Fest 2004 possible / possibly the best, in turn turning out to be a healthy club.

Well 73's for now,

VU 2 OZO Managing Committee Member &

On Behalf of Managing Committee

Topic: 1762 Message: 1762

Dear all,

First and foremost i would like to congratulate all the members who were elected on to the new Managing Committee. I wish you all the best for the year to come.

I had a suggestion. I am sure most of us HAMs and SWLs alike are no longer in touch with the Morse Code. Its just a suggestion, maybe at every meeting we could just have a small sort of refresher course on morse for 10-15 mins. Maybe just a small passage belted out in morse. Like the saying goes practice makes perfect so a little exposure will atleast keep us in touch.

I hope this would be helpful to one and all.

1766. LET US USE WHAT WE HAVE!

Yahoo group: m_a_r_s
Date: 2004-06-15 08:31:45 UTC
From: VU2UGO
Topic: 1766 Message: 1766

LET US USE WHAT WE HAVE!

We as hams have battled deligently against those who would take our frequencies, and we must press on. How do we do that? USE WHAT WE HAVE. The old adage "lose it or use it" has come into play.

Everyone has reasons why they got their Amateur Radio license. I got mine because I thought it would be cool to talk to someone in another state or another country without wires, using a station I built. Many who get their licenses were so excited when they passed the test after all that studying and the day they got their own callsign. Now, time has passed and the excitement has come and seemingly gone, but where did it go? Having no time seems to be the biggest issue. But ask yourself where do you spend most of your time when you are not at work? In front of the TV is the answer for most.

I don't know why we get distracted and seem to think we don't have time for something we love, or once have. We have lots of places to operate such as our cars, and even at work. So time shouldn't be an issue. Amateur Radio is wonderful hobby, and has done more for people than just being able to talk on the radio. Being able to create something of your own design and see it work is absolutely one of the greatest things to us. It allows us to learn, grow and expand our minds, not only in electronics, but also in learning about other cultures. What is that worth in money?

Why not get on the air tonight, or right after you're done reading this? You, as one individual, will be doing more than being happy you are back on air. You, as one individual, will help save our hobby, and because of our hobby, individuals have saved lives and paved the road to the future. Don't make the mistake of thinking you as an individual won't make an impact, because individuals added together will make an impact. Make the move, and get on the radio tonight on your favourite band and call CQ or find some old friends and talk to them, even if it's just to say hello. We have spectrum, so let's make good use of it.

- Ben Naber, KB9LFZ (QST-June'2004 Correspondence pg.24)

Topic: 1769 Message: 1770

Dear JPN,

You have a point there. On TV i saw a HF base station with VHF handies in operation from the accident sight. A guy was communicating using headphones.
Any further details on that please put on the group for information such who was operating and with whom.

Further to this, I had read an article in Europe regarding 9/11 disaster at the twin towers. The article was in the International Herald Tribune Europe edition dated 19th May 2004. I had cut out the article but lost it in transit.
The article was along on these lines:
"Both the towers were equipped with VHF repeaters and supplied communication on the various floors and departments of the World Trade Center. During rescue operations the various fire and police deparments did not know how to use the repeaters (read: the frequency of operation) and therefore could not evacuate people from the buildings.
Due to lack of communication and enimity betweent the police and fire department there was total confusion in the towers. Conflicting reports were recieved where in one case people were told to go down and evacuate the buildings while another report told the people to stay put in their offices. in the bargain people in the buildings were running down the stairs to evecuate and on reaching a certain floor were told to return to their offices by another department!!!

This confusion cost the people dearly as we all know. Had someone known how to operate the repeaters the operation of evacuation could have been smoother and more lives could have been saved."

this is the best i can remember frm the article and i have tried to find it in the online edition of the newspaper but without luck.

The moral of the story as i understand it is that it is not only essential to have the equipment in place and operational(as it was) but also the rescuing authorities should have known how to use it. What good is superb infrastructure if you don't know how to use it when the need arises?
I think in that respect ,atleast for our local VHF, MARS should assign a chain of command which should be known to all members irrespective of whether they are on the DMP or not. This is in the eventuality that any HAM listening in can relay information to the top of the chain in the event the lower rungs cannot directly QSO with each other.

This is just a suggestion but i am sure our team leaders know better.

If anyone is succesful in retrieving this article in the herald tribune please let me and the group know.

1771. Nothing is Lost...

Yahoo group: m_a_r_s
Date: 2004-06-18 13:55:19 UTC
From: vu2nlf
Topic: 1771 Message: 1771

Dear JPN / Shantanu,

Firstly, I am very glad that you are concerned, most people don't even give a thought to it...It is very obvious that you are not aware of the facts and hence you are of the opinion that MARS lost an opportunity.

For your information the MARS DISASTER MANAGEMENT TEAM was already put on alert and would have mobilized immediately if needed. I was already in touch with the Mantralaya who in return was in touch with Konkan Railways.. We were informed that their VHF links were working fine and communications were in order.

I am also aware that inspite of GOVT communications in order, our communications help is always appreciated by the common people. Unfortunately we have our sets of problems.

Firstly the news reached us quite late, in fact JPN called me and informed me about the accident.. Secondly for us it would be practically very difficult (or almost impossible) to reach Mumbai on VHF. Thanks to the absence of Matheran Repeater.. HF links in such short distance is quite ridiculous.

As far as chain of command is concern, every one in MARS knows that I head the Disaster Management Team, hence it is obvious that one has to contact me and I will roll the ball if necessary...All members including all SWLs weather on our SCRAMBLE TEAM or not can reach me give their inputs.. Unfortunately almost nobody did..

In any disaster or accident, my first objective is to evaluate the situation and come to a conclusion weather we should mobilize or not..For any successful operation it needs planning and coordination, We have to calculate our resources and feasibility, you just cannot simply rush in.. In this case I did not feel the need to mobilize, Since we were too late for action and we do not have the VHF capability for now (But very soon we will have the Matheran repeater going)..and the GOVT communications was in order...Even the mobile phone network was available..

We specialize in Disaster Communications.. and we need to mobilize only when there is communication failure.. and in this case the communication was in order.. So please lets not get all excited and get worked up... I know what I am doing ok...Trust me...

MARS also has a Disaster management Plan for Urban emergencies, (Mumbai City), it is for this very reason our VHF repeater was put up, I have repeatedly appealed to all the members interested to volunteer for our Urban Disaster Management, unfortunately very few people have come forward... Repeaters can do wonders during emergencies and Disasters, but it requires Human Interactions... they cannot work on their own....

So please don't think we have lost any opportunity... First we need to prepare ourselves to manage this types of disasters, and I am doing the best I can, We require funds, repeaters, Vehicles and most importantly volunteers.. how many of you guys are willing to chip in ? that is the question...

73
VU2NLF,
Head - Disaster Communications
MARS.

Dear NLF,

Thanks for the insight and the clarifications. We all are very aware that you put your heart and soul into HAM activities especially disaster management. I am sure you were pretty much in the loop with the government authorities.

It is also true that the rest of the communication was running and there might not have been a requirement for the MARS team to be put into action.

However, I was merely curios to know which agency was seen on TV and what the communication setup was in regards to what equipment was used and with whom the QSOs were done with. This was just out of curiosity as i saw the above event on a TV news channel.

I am sure no one doubts your ability as team leader and i certainly do wish you all the best to make the MARS DMP a success when the need arises.

It is also true that the rest of the communication was running and there might not have been a requirement for the MARS team to be put into action.

However, I was merely curios to know which agency was seen on TV and what the communication setup was in regards to what equipment was used and with whom the QSOs were done with. This was just out of curiosity as i saw the above event on a TV news channel.

I am sure no one doubts your ability as team leader and i certainly do wish you all the best to make the MARS DMP a success when the need arises.

1776. Fw: [ans] ANS-180 ECHO Prelaunch Update

Yahoo group: m_a_r_s
Date: 2004-06-29 10:28:51 UTC
From: VU2UGO
Topic: 1776 Message: 1776

Although the satellite project is still some $12,500 shy of its $110,000
fund-raising goal, AMSAT-OSCAR ECHO is at its launch site--Baikonur
Cosmodrome in Kazakhstan--and ready to go into space Tuesday, June 29

Gooluck ECHO!!

SB SAT @ AMSAT $ANS-180.01
ECHO Prelaunch Update

AMSAT News Service Bulletin 180.01 From AMSAT HQ
SILVER SPRING, MD. June 28, 2004
To All RADIO AMATEURS
BID: $ANS-180.01

Below are the prelaunch elements for Echo, based on the predicted launch on
29 June. The launch site is the Baikonur Cosmodrome in Kazakhstan. The
Epoch time is based on the Dnepr's Orbit Insertion Time.

UTC Epoch 6/29/2004 06:45:15.06
Inc 98.25582
RAAN 250.8905
Ecc .00001139

MA 261.417
Arg Per 275.47233
MM 14.4091

Echo First Communication Events

Plans call for Command Stations to begin working Echo with the morning passes over the US on 29 June. The first communication attempt with Echo will be on the pass over the eastern US, at approximately 1452 UTC, continuing with the next two passes over the US as well. The transmitter on Echo will not be turned on for a complete orbit until it is established that the bird is operating normally and that the power system is working properly. The transmitter will be shut off before the end of the pass window over the US. Transmission may also be intermittent over the US as we work with the Satellite. The hope is to leave the TX0 transmitter on for complete orbits starting as early as 0200 UTC on 30 June.

The callsigns for Echo's Pacsat Broadcast Protocol Digital system are:

Broadcast: PCAB-11
BBS: PCAB-12

Telemetry Submission Email Address

Until the ECHO Telemetry archive system is up and running please submit your CSV telemetry files received with TlmEcho to the following email address.

ke4azn@...

Once the archive system is up and running details will be published on how to submit and also download telemetry from Echo.

Check ANS for future bulletins as we progress with commissioning of Echo.

[ANS thanks Mike, KE4AZN for the above information]

/EX

1777. Echo launched successfully :-)

Jim,

Echo launched successfully right on time at 0630UTC. All satellites have
successfully separated and are in orbit. Commissioning begins in about five
hours but Echo will not be available for use for a few weeks. Watch for
official ANS bulletins and the AMSAT Web site updates as more information
becomes available.

http://www.geocities.co.jp/Technopolis/4025/SEMS2004.html

http://www.interfax.ru/e/B/0/0.html?id_issue=9715504

Jun 29 2004 11:30AM
Group of satellites put into orbit
MOSCOW. June 29 (Interfax) - A Dnepr rocket carrier, which took off from a
Baikonur launching pad at 10:30 a.m. Moscow time on Tuesday, has put eight
foreign satellites into their designated orbits, a Russian Space Troops
spokesman told Interfax.

The satellites separated from the rocket carrier's third stage between
10:45:15 a.m. and 10:45:31 a.m., the spokesman said.

"Once they separated, all the satellites were handed over to the customers for operation," he said.

The satellites include France's 125-kilogram Demeter satellite designed for scientific research, Saudi Arabia's 12-kilogram SaudiComsat-1 and SaudiComsat-2 commercial satellites and 35-kilogram SaudiSat-2 satellite, U.S. LatinSat-S and LatinSat-D communications satellites weighing 15 kilograms each, an AMSat-Echo satellite weighing 12 kilograms, as well as Italy's 12-kilogram UniSat-3 scientific satellite.

1781. POLICE ENQUIRY

Yahoo group: m_a_r_s
Date: 2004-07-03 06:56:47 UTC
From: Huzefa Merchant VU2HIT
Topic: 1781 Message: 1781
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all S.W.L. 's

Finally the police enquiries have arrived!!! so what next?? , no do not panic. Keep your cool.. I understand your anxiety. The delay in my mail must have made you all the more worried.
Well first regarding the delayed mail , I was doing the ground work so as to let you all know what are the things required for further processing. I am sending herewith the file which states what documents are required.

Let me explain how the police enquiries are conducted
This time the enquiries have come directly to SB I "S" branch from IB rather the from Maharashtra State Police HQ , So it is going to be fast.

SB I "S" branch requires a declaration form to be filled and a copy of proof of residence(telephone bill / passport photocopy) to be attached along the form & photocopy examination result sheet issued by WPC (the file I am sending indicates the status of your form and other requirements).

SB I "S" branch will forward these enquiries to your local police station for the field enquiries in 2-3 days time , for which you have to follow up, I will let you know your outward no. so as to you can follow up with your respective police stations , Generally the local police station enquiries are processed by Police Inspector (P.R.O). In case no one initiates any enquiries in 5-7 days time, you will have to follow up with concerned inspector with the outward no.

Documents required by the local police station differs as per their needs. Generally keep a photocopy & original of your Ration card, Rent receipt, passport, light bill, telephone bill , election id card , & result sheet, either of the documents may be required, also be ready if they ask you any relevant question, such as " why are you applying for this licence?" , "are you going to use it for your business, what kind of business?" etc. All you have to do is convince them politely that this is the hobby and we have appeared for a government examination and we are getting this licences, no commercial usage, as they are completely unaware about this hobby so they will be very inquisitive so do not get worried.

Also remember... if questioned...regarding copying/ receiving any other stations..... that your equipment can only receive and transmit on ham frequencies and cannot transmit/ interfere / copy/ hear any other emergency services on your handy / base station. This is a very important point.

Please note that members who were in Thane Batch but residing in Mumbai (Mulund & other areas in Mumbai who attended the Classes in Thane) need to fill up the declaration form which is to be submitted at Mumbai Police SB-I so please refer the file and contact me if your name appears in the list

Also please send me the documents by courier preferably Vichare to my below address

Hi all,
just wondering if we can get AMY as a guest at Hamfest say for inauguration then imagine the response. Of course security would be a concern but it's worth a thought. Your comments awaited on this.

Dear friends,

Having bagged the opportunity to host the Hamfest 2004, all martians are under cloud nine. Really it's a great honour to organize the coming mega event, which all VU hams in India are looking forward to attend. At the same time let's not forget the corresponding responsibility and it's going to be tough days ahead for all of us. First thing that comes to our mind is the manpower that will be needed to successfully organize the event. It's therefore prudent to have a fresh look at our current membership.

If you go through the annual report you will find that your society is doing yeoman's service in not only promoting ham radio but also providing whatever communication support that governmental bodies have asked for. Those of you who still like to have a copy of annual report, of MARS, for the year 2003-04, can contact me.

MARS has taken due care in sustaining interest of SWL by involving them in various Ham Radio related activities.

Such activities, however, you will agree with me, cannot continue if your society does not have sufficient funds. One of the best way and least expensive way is to pay your annual membership fees on time. Of course nothing is better than becoming a Life Member.

The present membership dues are as follows:
☐ Life Membership-Rs.5,000/
☐ Ordinary (annual) membership-Rs500/-

We are already in July and our record shows that there are many hams/SWLs who have yet to renew their membership. I understand that owing to your busy sked you were probably not able to keep track of membership dues.

Nevertheless I would appreciate if you please make it convenient to send your dues on the following address at the earliest:

Prashant Koli, VU2CBU
601, Chandraganga Apartments
Near East-West Fly Over
Mulund (East)
Mumbai-400 081
Tel. # 25675226
Cell# 35675226

Wishing you all the best,
73s

From: Prashant Koli
Topic: 1786 Message: 1786

Dear All,

It is nice to know that Police enquiries for the students of our last batch of Ham Radio classes has come. Your Society has taken lot of pains in follow-up, in Mumbai and Delhi. However, it is found that many of the SWLs have not renewed their membership. In the situation it would be very difficult to render them any further assistance unless they continue to be our members. Hope all SWLs who have yet to renew their membership will renew it at the earliest so that our society can continue to flourish.

Best of luck.

Dear Deepak,
I had suggested long time back to the Society to make VU2AMY an honorary member. It would add prestige to our society. It is now up to the society to decide of course.

From: Ajoy
Topic: 1769 Message: 1798

Dear Mumbai friends,

This has nothing to do with 9/11 but regarding WTC when everything is calm and peaceful.

I am having one of the file video taken by New York Hams while installing their repeater antenna on top of the WTC - a copy of this was presented to me when I visited NYC recently (Feb to Jun 2004).

The following points to be noted :-

This video gained importance only after fall of WTC.

As there was so much of RF QRM on top of WTC, the video recording is doubled with ghost pictures coming as interference from Television Station inspite of lead sheet wrapped recorder.

Lots of other antennas and the way it is mounted on top of WTC can be seen.

I do not know if some VU hams are interested to see this, if so kindly let me know, so I can bring this to Mumbai while I come over to the HFI 2004. There is really nothing really worth recording/copying if you see once.

The only VU Ham who volunteered when the 9/11 incident happened is VU2COT Bangalore Suresh who was working in NY and he was with the American Red Cross - Emergency Communication handling traffic as a volunteer. Presently, VU2COT is in UK with his MQTH.

Dear Friends,

Upasana is 1 Year Nine Months and the only harmonic of Amitava Saha VU3RUN born 9 years after their marriage.

VU3RUN runs a small printing business in Kolkata and as Upasana needs Heart Surgery costing 1.5 Lakh this msg is to appeal amongst hams of Mumbai.

The details of the appeal is on homepage http://geocities.com/help_upasana/ over at Kolkata the hams who are co-ordinating are VU2KFR - Koochi and VU2HFR - Horey.

We at Bangalore have been moved to this appeal and have not only been contributing for the operation, have volunteered to look into logistics as the operation is to be conducted in Bangalore's Narayana Hrudayalaya and also trying our contacts to bargain on the main bill itself.

Kindly see if you can be of help.

Floods, the worst ever: Assam CM

G Vinayak in Guwahati | July 12, 2004 10:23 IST (REDIFF NEWS)

The current floods in Assam have surpassed all previous records in terms of damage to infrastructure, livestock, crop and other assets, Assam Chief Minister Tarun Gogoi has told Prime Minister Manmohan Singh

In a letter to the prime minister, he said that a preliminary assessment has found that 2,286 villages have been inundated affecting 300,000 hectares of crop area. As many as 18 out of the 24 districts in the State have been hit. NH-31 remains submerged; road and rail communication continues to be disrupted severing the State's transport links with the rest of the country.

At least 13 people have drowned. Floods waters have washed away 10,678 houses while over 400,000 houses are partially damaged. The total damage to the State in the current wave of floods at nearly Rs 1,000 crore.

Also Read

Floods: Army rescues 350 children

Breach in Bhutan, lower Assam threatened

He has asked the prime minister to immediately depute a high powered central team to make a joint survey of the flood situation in Assam and allot Rs 1,200 crore under the Natural Calamity Contingency Fund even as more than 25 lakh (2.5 million) people were hit by devastating floods.

The North East Frontier Railway has been diverting trains through the Guwahati-Goalpara route on the south bank of the Brahmaputra since the track on the main route between Guwahati and New Jalpaiguri in north Bengal is submerged.

The road link between state capital Guwahati and southern Assam's Barak valley is also cut off following heavy landslides on National Highway 44. This has also affected access to the neighbouring states of Mizoram and Tripura.

MARS disaster management team consisting of NLF, UGO, IZO, OZO, AUA, has already left for Assam for providing communications support....lets wish them all the best!

1806. Brahmaputra Expedition

Yahoo group: m_a_r_s
Date: 2004-07-16 05:00:48 UTC
From: Shantanu Chand
Topic: 1806 Message: 1806

Dear All,
In the time of floods and major disasters created by rivers, i offer you an expedition on the largest river in Asia. I have a tie up with an adventure company called Aquaterra Adventures.They are organising an international expedition on the river Brahmaputra from 19th Nov to 3rd Dec 2004.
I have personally been on an expedition on the Bhagirathi River with them and can vouch for them as being one of the best river guides in Asia. In fact they have been called in for an expedition on the dangerous Blue Nile in Ethiopia www.niletrip.com
Anyways to cut the story short i am enclosing below an email sent to me by Aquaterra. Those in Mumbai who are interested may email me on shantanuchand@... and i can forward the details to you.
Best Regards
Shantanu Chand

The Upper Brahmaputra Expedition Nov 19-Dec 03, 2004

Aquaterra Adventures invites you to be an expedition member on one of the top rafting expeditions in the world, from Nov 19-Dec 03, 2004 ! Its a life expedition in every sense.....

The most exciting way to run the Upper Brahmaputra's (or Siang as its known in Arunachal Pradesh) legendary big drops, rapids, riffles, and strong eddies is on a 08-day river trip paddling down its enormous rapids with 25-30 foot high waves and hydraulics, camping each day on river side beaches and travelling down the rivers remote gorges. The trip is not just a river expedition - its a cultural eye-opener travelling through a very remote part of India, an amazing ferry ride, drives through tropical forests and lots more.....

Before launching from the put-in at Tuting, your guides will instruct the crew in the fundamentals of safety, paddling, white-water, and self-rescue. After your day-one plunge through a ten-mile stretch with some of the biggest rapids rafted commercially, rapids known as "Ningguing" (twice the size of "Lava Falls on the Colorado) and 'Pulsating Palsi", you'll be ready to navigate down the Ningguing and Marmong gorges. You will raft down big drops in the gorge including the 'Roaring Rikor" and "Zebra Rock" till the Class 6 "Toothfairy" at Cherring. You will scout "Moing Madness" and see huge 20 foot plus breakers within arms reach. You will spend days floating down the beautiful vastness of this river, the 'Son of Brahma", past tribal settlements, run down "Karko Killer" and brace yourself for the final drop at the "Pongging Punch".

This river changed forever after a flood of June 2000 sent the river up 150 feet, destroying everything in its path. Aquaterra Adventures ran the first open fixed departure on this river in Nov-Dec 2002, with a crew of over 50 down a path breaking trip which documented the river for all who care to join future expeditions. We followed up with a paddle raft descent in Nov-Dec 2003 alongwith the first complete descent of the Lohit, one of the fiercer tributaries of the Brahmaputra.

To run such a trip of a lifetime demands that you travel with the experts of river running - we are the only outfitter who has run open fixed departure expeditions on this river and very clearly, have the superior skills, equipment, guides and people who make this "real life expedition" an outstanding success. Our 2002 trip made it to the cover of the World's No.1 Rafting, Kayaking and Canoeing magazine, PADDLER (see article on www.treknraft.com)

Space on the trip is limited, and bookings over the last two have closed well before the last date !!

Write in or call us for more info, or drop into our office for a visual preview of the trip.

For trip plan and more details, drop us a line at aquatera@...
or call us at 29212641, 29212760, 51636101, 9811103831
We look forward to hearing from you.

Mumbai Amateur Radio Society

Hi friends

As you are all aware that our Amateur Radio Emergence Service Team headed by NLF including Sandip Adiwarekar-VU2UGO, Arun Singh-VU3AUA, Micky Korde-VU2IZO and Anish Korde-VU2OZO were mobilised on a call from Delhi to Bihar which is ravaged by Floods all over the state.

NLF & team left early morning by air on 15-07-2004 via New Delhi for Patna, Immediately Reaching they met State Secretary R & R and were informed about the situation , a control station was setup in sachivalaya headed by VU2IZO & VU2OZO with whom the QSO was made by us on 40 mtrs yesterday

As per the information received NLF, UGO & AUA will be leaving Patna and helidropped in 2 remote district which are submerged in waters and no communication possible.

16/06/2004

10.45 am : As per last update received from Patna , NLF UGO & AUA left Patna and are on the way to flood ravaged district , ZRS & Ankur who are on Monitoring Mode are waiting for a QSO with the MARS ARES Team from Disaster Area

Further Update will be made as per the information received from the Disaster Site.

VU2HIT
Huzefa Merchant
Committee Member

P.S. Ham Members are requested not make ant QSO ctc with the MARS ARES Team unless they request for , they are in regular touch with Mumbai(ZRS) , Also they are on Batteries so they will be coming Intermittently on the air to pass emergency messages.

MUMBAI AMATEUR RADIO SOCIETY

Dear Ham Friends

As you are all aware Grave floods situation in Assam & Bihar ,Mumbai Amateur Radio Society received an SOS call on 15/07/04 at 12.30 midnight from Mr Saroj Jha (Deputy Secretary ,National Centre of Disaster Management(NCDM) Ministry of Home Affairs Govt. of India, ex-A R R UNDP INDIA) to provide communications support in the floods affected area , Mumbai Amateur Radio Society (MARS) immediately responded and 5 members of MARS ARES Team were immediately mobilised.

MARS ARES team headed by NILESH RATHOD - VU2NLF, SANDIP ADIWAREKAR - VU2UGO, ARUN SINGH - VU3AUA, MILIND KORDE - VU2IZO and ANISH KORDE - VU2OZO took the first available flight to Patna via New Delhi, from where they were airlifted by helicopter to various far flung submerged district.

MARS ARES team hams communicated vital information to base station set up at Patna Secretariat (Sachivalaya) on both RT/digital mode which were also being monitored at our MARS MUMBAI CONTROL, we request hams who are QRV on HF may please monitor and if any help required ,necessary action might be taken.

MARS ARES team members are Amateur (Ham) Radio Volunteers who have their own job and not working full time as wireless operators in any Ham Radio Institute ,also the team members were aptly trained here locally thru various simulated disaster management exercises which were regularly held in our society.

Further Update will be made as per the information received from the Disaster Site.

Dear NLF and all at MARS,

Was quite amazed to hear about you'll leaving to Bihar.
It was unbelievable.
I am sure you'll guys will perform…. and help save a thousand lives.
I am of the opinion that even in everyday life if we an offer such life saving services…like even reporting an accident and calling for an ambulance, it would make ham radio an unbelievably helpful activity for the community.
I am sure if we talk it over with the govt we could set up a network like that.

Regards and Best wishes to all at MARS.

Dear Kapil,
Thanks for the reality check. I am sure it takes pictures to get the real story to sink in. just by saying our boys are out there does not have the same impact as pictures. As in the previous mails you must have seen the visuals from the scene.
Anyways, the boys are doing a great job and we look forward to their safe return.

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

Our Team was requested by Ministry of Home Affairs to mobilize on 14th July 2004 for Patna to provide Communication support in the Flood effected areas. I Immediately alerted our Team Members, Some could make it and some could not, Finally Our 5 member team left for Patna at 15/07/2004 at 09:35 hours by Air Sahara , which was received at Patna and were taken to the Sachivalya (Patna).

Ham Radio Communication Support at SitaMarhi, Shivhar and Patna.

Team Members :-

Nilesh Rathod - VU2NLF - Team Leader - Location : SitaMarhi (HF/ VHF/ Digital)

Sandip Adiwarekar - VU2UGO - Leader - Location : Shivhar (HF / VHF).

Arunsingh Rawat - VU3AUA

Anish Korde - VU2OZO - Leader - Location : Patna (Sachivalya) - (HF).

Milind Korde - VU2IZO

Zyros Zend - VU2ZRS - Leader - Location : Mumbai Control (HF / Digital).

Huzefa Merchant - VU2HIT

Ankur Puranik - SWL.

We met the Chief Secretary and we were instructed to set up 1 station at Sachivalya - Patna and 2 teams were requested to proceed to SitaMarhi and Shivhar. The same evening by 21:00 hours we had set up the Sachivalya station and we were able to communicate with our hams Suhas -VU2SMN at Kolhapur , Jagdish Bhai VU2KIB & Zyros VU2ZRS in Mumbai. Micky - VU2IZO and Anish VU2OZO were stationed at Patna. (Sachivalya).

The next day our Teams departed for SitaMarhi and Shivhar by Indian Air Force Chopters at 12:00 Hours. I reached my location at SitaMarhi at 13:00 Hours, VU2NLF was received and was taken to The District Magistrate of SitaMarhi. He was happy to receive me and my Ham Radio station was setup in 25 minutes. Our other Team reached Shivhar (Sandip- VU2UGO & Arunsingh VU3AUA) were received by The District Magistrate of Shivhar. Their Station was installed and operational by 16:00 hours.

Our teams at SitaMarhi, Shivhar and Patna were in contact using our HF Set (High Frequency Radio) by 16:16 hours. A VHF link between SitaMarhi and Shivhar was also established. A digital link from SitaMarhi and Mumbai is also in order, pictures and text messages are being sent to Mumbai using HF Radio.

All our messages are in Suddh Hindi and thus a challenging job for us to RX/TX these messages, I am happy to inform that all the teams are copying the messages were well..

Sandip - VU2UGO did a wonderful job in passing the QSPs, I on the other hand managed to send the QSP's but and a hell of a time copy and writing in Hindi, I of course asked the local clerk to write the messages for me and I would Transmit the QSLs. All our messages were given to by the concerned authorities were sent successfully and were greatly appreciated by the respective District Magistrates.

Zyros - VU2ZRS, Huzefa - VU2HIT & Ankur also gave their support from Mumbai, I also had a casual QSO with Sarla - VU2SWS from Mumbai.

There was not much traffic as the people of Bihar are quite used to these floods, the Govt also takes it real easy. hence unlike Gujarat, we experienced very little traffic.

On 22/07/2004 telephone services at SitaMarhi were restored and telephone services at Shivhar were expected to start by evening. We were therefore asked by Chief Secretary to return as the telephone lines were restored and our services were no longer needed.

Both our teams (SitaMarhi and Shivhar) were airlifted by Helicopters back to Patna, upon reaching we submitted our report to the relief commissioner and met the chief secretary, he thanked us for providing our vital communication services. The next day we all left Patna by Indian Airlines flight back to Mumbai.

It was a wonderful experience for us, totally different from our Gujarat experience, we did learn a lot, I am sure with this newly acquired experience we will be able to improvise our skills further and raise our competency level to greater heights.

Nilesh Rathod, VU2NLF.

Head - Disaster Communication.

P.S All members are requested not to print or forward these reports to other groups websites and Magazines without my consent. A low profile is requested by the Govt. (We have therefore not given any press releases)..

Hello All,

Indeed a great job done and very short noticed mobilization. I believe Nilesh was alerted at 1.30 early morning and team took 9.35 flight. Was really fast and well organised in a spur of moment.

Congratulations to the team and all those who supported from Mumbai.

73s,

Mehul
Secretary-MARS.

From: vu2kiz
Topic: 1834 Message: 1837

Dear Nilesh and the team,

Congratualations for the wonderful work.

I would have loved to join the field team. You remember that I joined the Gujarat earthquake communication team while the train was passing from Vadodara. However, this time neither your plane from Mumbai to Patna stopped at the airport where I was nor I received the alert call from you (during Gujarat I came to know from air). Just to remind you that I am Life Member of MARS and Member of the Emergency Communications Team and have taken part in three drills once from Baroda, second time at Pune and third time at Dhanu Road. I had also given my Jaipur phone number (0141) 228 1888 and Baroda (0265) 228 5343.

Once again congratulating the team and I feel proud of being a member of MARS.

Kailash

HD radio receivers get a boost

Jul 29, 2004 4:45 PM
RF Design staff

Hoping to make a dent in the emerging terrestrial digital radio market in the United States, Texas Instruments has launched new DSP-based baseband chips for iBiquity Digital Corp.?s HD Radio technology. While one is a baseband for HD Radio receiver, the other combines HD Radio technology with analog AM/FM, thereby supporting both forms of radio on a single chip. In fact, according to TI, this will be the company?s third-generation digital radio silicon.

Meanwhile, iBiquity?s terrestrial digital broadcast, called in-band on-channel (IBOC) is still undergoing AM FCC tests for nighttime broadcast. While IBOC-based digital FM has been approved by the FCC for both daytime and nighttime broadcast by existing analog radio stations, it has yet to approve digital nighttime transmissions by AM radio stations due to interference concerns. This is expected to be completed soon.

The new digital basebands integrate TI?s expertise in DSP technology with software developed by iBiquity Digital to provide all of the digital functions required to build an AM/FM and HD radio receiver, in addition to allowing for audio post processing and MP3 and Windows Media Audio (WMA) CD support.

The new TMS320DRI350 brings integration of HD radio technology by combining IF-sampled AM/FM and HD radio processing on the same chip. This integrated design approach is the lowest cost implementation of HD radio technology. In addition, TI is responding to manufacturers? demand for an HD radio-only solution with its new TMS320DRI300 baseband, providing HD radio functionality, while allowing OEMs to continue using their own proprietary designs for AM/FM support. The DRI300 allows manufacturers to build on existing solutions and easily add digital radio capabilities.

The DRI350 and DRI300 basebands are complemented by TI's mixed-signal DRI8201 chip, which provides the intermediate frequency (IF) analog-to-digital converter (ADC), digital down converter (DDC) and control digital-to-analog converter (DAC) needed in a complete digital radio design. The DRI8201 uses an 80-MHz, 12-bit ADC to digitize the AM/FM IF signal from the radio tuner with the high precision needed for optimum AM/FM and HD radio performance. Samples of TI?s DRI350 and DRI300 HD radio basebands are available now with volume production expected in the fourth quarter of 2004.

Mumbai Amateur Radio Society

Dear Friends,

I have finally received a OK from the Govt to go head with press release for our Disaster Communications in Bihar. Our article may be printed in tommorrow's SUNDAY MIDDAY.

Nevertheless all members are requested to confirm with me before printing any of this matter in any magazine / News Papers or forwarding mails / articles to other groups or websites.

Lets hope that MARS get good milege out of it, which will probably help us in getting sponsors for our up coming Hamfest India 2004.

Mumbai Amateur Radio Society

Dear Friends,

A lot of our members are concern about the floods in Gujarat, many have called me to know if our help is required or not.

Well, I am pleased to inform you that at present there is no real emergency, a lot of places in South Gujarat, such as Daman, navsari, Surat are badly effected by the floods, but so far no casualites are reported. I am touch with all our ham friends in these areas. All the L.L. mobile phones are operational and fully functional... so at this point of time our ham radio services are not at all required... Our Hams is the region are already in touch with the local collectors and District Magistrates... and the Govt. has clearly said " Hams Not required" at this point of time as land lines, mobile phones and police wireless network is fully functional...

Further the Gujarat hams are already on alert and ready to go into action if need arises... we are also on standby as back up if in case we are required...

So guys, please relax... take it easy, our team will be on Yellow Alert... and watch the situation....

Wi-Fi Shootout in the Desert

By Kim Zetter | Also by this reporter

02:00 AM Aug. 03, 2004 PT

LAS VEGAS -- Mobile warriors having trouble making a wireless connection across the hall might want to give some Ohio teens a call. This weekend they were able to make a 55-mile Wi-Fi connection.

The teens from Cincinnati got an ovation at the DefCon hacker conference here Sunday when organizers announced at the Alexis Park Resort that the winners of this year's Wi-Fi shootout might have broken a world record for ground distance in establishing a 55.1-mile Wi-Fi connection.

DefCon, in its 12th year of gathering hackers, security professionals and undercover intelligence agents from various countries, held its usual list of extracurricular competitions to accompany talks on subjects like hacking with Google and hacking RFID tags.

The Wi-Fi shootout, held for the second time, was among the most popular contests. Six teams participated, including two women who won an award for the most innovative antenna design, which consisted of an assortment of cardboard, duct tape and a car sun visor. That's only slightly less conventional than previous contestants, who built antennas from Pringles and Hormel Chili cans. The jury-rigged antenna achieved a connection at 0.82 miles.

Contestants had to set up a pair of computers, get an 802.11b Wi-Fi connection working on each one and then see how far apart they could place the computers and still maintain a connection using homebrewed and commercial antennas with and without amplifiers.

While one part of the winning team climbed a mountain with equipment, another part of the team climbed a second mountain. Then the first group shot a signal from one station to the second station with an encrypted message provided by the judges. They logged increasing distances over two days. (Wired magazine helped sponsor the contest.) Contest judges verified the distances using GPS coordinates.

Last year, teams got caught in a two-hour traffic jam before they reached the base camp, at 4,650 feet above sea level, then faced rain and thundershowers in addition to blistering heat. This year they faced only the heat and the absence of bathrooms and fresh beer for miles around.

Ben Corrado, Andy Meng, Justin Rigling and a fourth friend, Brandon Schamer (who didn't accompany them from Ohio), won the greatest distance achieved for an 802.11b network. The teens, two of them 18 years old and the other 19 years old, achieved 55.1 miles using homebrewed antennas on both ends along with amplification, exceeding last year's winner by 20 miles. Then, when they established that record, they turned off their amplifiers and broke the record for an unamplified connection at the same distance. At the announcement on Sunday, the crowd rose to its feet.

The Guinness world record for Wi-Fi connection stands at 310 kilometers (about 192 miles), achieved in 2002 by Wi-Fi equipment maker Alvarion and the Swedish Space Corporation. But the companies achieved the distance by launching the equipment in a Swedish weather balloon, which many feel is not the same as a ground measurement, since there are fewer obstacles to block a WiFi signal in the stratosphere. The Swedish group also used amplification to achieve its record, but the DefCon team maintained its 55.1-mile connection even without amplification. Guinness World Records could not be reached for comment in time for publication to determine whether the DefCon team's efforts count as a distinct record.
(http://www.newswireless.net/articles/030307-record.html)

Corrado told the crowd that they initially had no plans to attend DefCon but decided to enter the contest 19 days earlier after a "business plan" they devised fell through.

"We were going to war-drive around Cincinnati and find unencrypted wireless access points," Corrado said. "We knocked on people's doors and asked if (they) wanted us to encrypt them, and they just got all freaked out. So we were searching for other things to do with the equipment we had just purchased."

After Meng stumbled across the DefCon Wi-Fi shootout website, Corrado called Rigling and said, "Hey, dude, we're going to Las Vegas in like 19 days!" They already had a few 9-and-a-half-foot satellite dishes that they had collected around Cincinnati over the last few years.
(http://www.wifi-shootout.com/

"We were planning on putting them up on towers behind our houses and sharing our broadband Internet connections (with people)," Corrado said, to a chorus of hoots and hollers from the crowd. But due to "parental restriction" they scrapped that plan.

"We still had the dishes laying in our backyards and we thought, what the hell. Why not?" Corrado said.

After collecting more equipment, they ran a test run, placing the stations two-and-a-half miles apart, and got a connection that was much better than any link they had ever established with laptops sitting side-by-side in

their bedrooms.

When Meng's dad, a radio frequency engineer, looked at the test-run data he said, "Oh my God. They might have a chance at this. They might actually have to go to Las Vegas."

Not without Justin's father, however. Greg Rigling drove them across the country in a van, with the 10-foot satellite dish strapped to a trailer.

Then he spent two days driving around Nevada's mountains helping them get a signal.

They might have achieved an even greater distance, Justin Rigling said, "but there was no road left."

For their efforts, the teens received a stack of O'Reilly books, Best Buy certificates and ?ber-hacker badges, allowing the teens and Justin's father lifetime admission to DefCon for free.

After the awards ceremony, the three were seen in a corner of the conference room trying to sell their equipment to lighten the return trip home.

1846. FWD:15th Thane Mayor Varsha Marathon - a report

Yahoo group: m_a_r_s
Date: 2004-08-07 14:34:04 UTC
From: Prashant Koli
Topic: 1846 Message: 1846

15th Thane Mayor Varsha Marathon (National Level)

Report

As usual MARS received a request for providing communication support to Thane Varsha Marathon, a national event. We received a verbal request first and then a written request by fax on 17.07.04

On 18th July,2004 MARS hams joined at Thane Marathon Office, at around 11:30 hours:

The Main Station was put up on the terrace atop Thane Marathon Office. The station had VHF Base with stag 5/8.

VU2VVP was called-up to support the marathon as relay station.

We had 4 Mobile stations & 3 Static stations:

Station details: Callsign Handle Location

Main Control : VU2NFS Nafeesa Thane Maraton
VU2CBU Prashant Office
VU2MUF Minal

Relay Station : VU2VVP Vijay From home QTH.

Mobile 1 : VU2SFN Shailesh Timer vehicle

Mobile 2 : VU2IES Santosh Communication Vehicle

Mobile 3 : VU2GBI Mukund Fire Officer's
VU2CFO Vijay Vaidya official vehicle

Mobile 4 : VU2KDM Kadam Fire Brigade's
Maint.Vehicle

VU2JPN Jaiprakash Start/Finish Point

Other Static Station: VU2GYM Mohammed
VU3MWH Ananta
VU3PPE Pranav

The Marathon race started at 1440 hrs in batches ☐ as per age categories. It was great to watch kids and senior citizen's participating in races.

The old timers (marathon runners) were facilitated before the event.

VU2PDT, Hon. Shri. Satish Pradhan (President Thane Mayor Varsha Marathon) also had communication with Main Control & VU2VVP.

All stations were copied 5/9 by Main control except at certain locations where our relay station, VU2VVP, chipped in. The messages consisted of locations reached by runners, distance covered and the leading positions of runners. This information was passed on to the Marathon officials. After arrival of 1st three winners at the Finishing point, around 1745 hours, we decided to close down the station. By this time all the Mobile stations also reached the finishing point. At 1800 hrs we closed down the station and informed VU2PDT Satish Pradhan, who expressed satisfaction for work done by MARS.

Earlier, VU2IZO had agreed to be event manager for the event Since ARES team of MARS, including VU2IZO had QSYed to Patna /Assam, in answer to a call from the Central Govt., the undersigned,VU2JPN, was asked to manage the event.

I would like to thank VU2CFO for the efforts taken by him in making this event happen. VU2CFO also sponsored the afternoon lunch for the team and took care that memebrs of the team didn't feel left out.

I would also like to thank the Managing Committee of MARS for reposing faith in me.

Thanks are due to all the team members of MARS who showed a fine spirit of co-operation in make this event a successful one.

Jaiprakash
VU2JPN

1847. Monthly meeting

Yahoo group: m_a_r_s
Date: 2004-08-07 16:50:08 UTC
From: Prashant Koli

Dear Mehul,

Sad to hear that Huzefa has resigned from the Post of Chairman of MARS.

So who will have the Reins of MARS henceforth or rather who is the new Chairman as this Post cannot be left unfilled for long.

Also, you have written in another mail to Abhay Shah that you are settling down in Singapore. So, being a SECRETARY of MARS can you please explain how will you be controlling the events here in Mumbai, India. Or rather have you fixed any PROXY for yourself here.

Look dear Mehul, please don't get me wrong, but my fellow MARTIANS are really confused now as to whom do they ask about the progress of the various events and related matters.

Hope you are fine there in Singapore.

1863. Resignation

Yahoo group: m_a_r_s
Date: 2004-08-12 10:22:22 UTC
From: mehul2k@vsnl.com
Topic: 1863 Message: 1863

Hello Martians,

Some of you already know and for the rest, I have shifted with lock, stock and barrel to Singapore. Have got a job and settling down.

With more focus required on MARS activities, particularly when we are doing HAMFEST which is just down the corner, I would not be in a position to maintain such focus coz of geographical distance as well as other academic priorities which need to be addressed currently.

In such event, I have resigned from the post of Secretary and have asked Prashant (Hon Treasurer) to take over the reigns of the committe and fill in the gaps of MC members as well as the portfolio of Chairperson and Secretary within the framework of MARS constitution. Founder members and committee members would be able to make justice to this issue together.

My resignation from Secretary's post also envelopes resignation from MC member's post as i would not be able to work in that context as well.

However, till the new office bearers take over, I shall be more then happy to continue as the guard and wish all the best for the new office bearers/Committee members.

Many thanks to all MARS members and MC members for their support during my tenure as secretary. All the best to HAMFEST committee(s) and all members of MARS.

73s,

Mehul Chovatia
Secretary (Outgoing) - MARS

1864. Tempest for Eliza

Yahoo group: m_a_r_s
Date: 2004-08-13 11:09:48 UTC
From: VU2UGO
Topic: 1864 Message: 1864

"Tune into your Monitors"

Tempest for Eliza is a Program that uses your computer monitor
to send out AM radio signals. You can then hear computer
generated music in your radio.

How does this work ?

All electronic devices send out eletromagnetic waves.
so does your monitor. and your monitor does it all the time.
and at very high frequencies. high enough for your short wave
AM radio.
all you have to do is display the "correct" image on your screen
and your monitor will emit the "right" signals.
Tempest for Eliza displays pictures on your screen. one for
each note in the song.

http://www.erikyyy.de/tempest

Check the 'FILE' section of the egroup for article published on
TEMPEST in LFY-AUG'04 written by Avnish Joy, LFY Bureau
or email a request to me at vu2ugo@.... The instructions
in the article will work for Red Hat Linux 9 or Fedora Core 1 Linux.

1866. Special Night Owls' Night

Yahoo group: m_a_r_s
Date: 2004-08-14 19:39:47 UTC
From: nafisa shikari
Topic: 1866 Message: 1866

Dear /Friends,
It has been our practice to conduct a special Night Owls' Net every year on the 15th of August. Unfortunately we have not been able to do it for the last 3 or 4 yrs. We some of us were on the air at 12 a.m. and we decided to have a special net today. I know it is a very short notice but it is my sincere request to you all to be on the special net in a big number. Hopefully, VU2 WLL will also be in town and we the Net Controllers will be very happy to see you all on the Net big numbers.
Looking forward to the Special Net.
VU2 NFS

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

You are aware that we have the honour of hosting the "HAMFEST INDIA 2004" in Mumbai.

A special dedicated team of volunteers of our society are working hard to make this event a memorable one. We plan to a 3 day Hamfest in the month of December 2004. (The dates and venue will be announced by end of this week).

To organize and good hamfest we have estimated a budget of approximately Rs. 15 - 20 Lakhs. We hope to collect this funds by way of Sponsorships, Advertisement,Donations, Raffle Tickets, Registration charges, Stall charges etc... We are sure with the help of all our members and well wishers we will meet our target.

In order to generate some working capital, the Hamfest Committee has decided to have a Raffle Tickets draw.. The Raffle ticket will be of Rs.1000/- (One Thousand Only) each. There will be only 150 tickets... The society will account this money as donation for the hamfest and therefore it will issue a 80G certificate to you, which will give you 50% Income Tax exemption... so technically you pay Rs.500/- per ticket...

This Raffle ticket draw is for MARS members only, you may opt for 1 or more tickets, it is up to you.. We plan to have next raffle ticket draw, which will be open to all hams registering for the Hamfest..

The Raffle Tickets draw will have following prizes :-

1. ICOM - IC-706 MKII G (HF/VHF/UHF) mobile set -------- 1 Unit.

2. ICOM - V8000 (VHF 75 Watt) base station - 3 Units.

3. S.M.P.S - power supply for (HF /VHF) 20 Amps/ 13.8 DC... - 3 Units.

4. 5/8 antennae for VHF - 5 units.

==========

We have already sold 59 tickets...as under :-

1. nilesh rathod vu2nlf 10 tickets

2. micky korde vu2izo 5

3. prashant koli vu2cbu 5

4. kapil chandani vu2mig 5

5. roomy shroff vu2gte 5

6. aslam swl 5

7. huzefa vu2hit 2

8. sandip vu2ugo 2

9. p.v.jaiprakash vu2jpn 2

10. tirandaz irani vu2tpi 2

11. shailesh vu2sfn 2

12. zohar vu3zna 2

13. abhay vu2aih 2

14. amit malgaonkar swl 1

15. pankaj shah swl 1

16. ulhas paralkar swl 1

17. feroze patel feo 1

18. viren gada swl 1

19. pankaj pasad vu2rio 5.

==========

With these kind of prizes, I sure all you will opt for these tickets, the odds are very good that you will get something or the other, for e.g I have taken 10 tickets, so the calculated odds for me will me almost 1:1, I may get at least 1 item from these 12 goodies...

Please note we have only 150 tickets on first come first serve basis, so please hurry and book your tickets with me or with mickey - VU2IZO.. at the earliest... The draw will take place in 2 weeks time..

I sincerely request all our members to contribute generously for our good cause, please treat this as donation, you may be the lucky one....

Spectrum policy

On the same wavelength

Aug 12th 2004 | SAN FRANCISCO
From The Economist print edition

Governments and industries are bracing themselves for the possibility that radio interference will become a thing of the past

MOST people do not worry much about physics or politics when, for example, they look at the colours of a rainbow. Nor do they pause much when they use a remote control for their TV set, talk on a mobile phone, listen to the radio, cook food in their microwave oven, open their car door from a distance, or surf the internet without wires. Yet these are all phenomena of electromagnetic radiation. How humans harness electromagnetic waves?and specifically those in the radio-frequency part of the spectrum?has become so important that old and new ways of thinking are now lining up for a tense confrontation that will affect numerous businesses and billions of consumers.

The old mindset, supported by over a century of technological experience and 70 years of regulatory habit, views spectrum?the range of frequencies, or wavelengths, at which electromagnetic waves vibrate?as a scarce resource that must be allocated by governments or bought and sold like property. The new school, pointing to cutting-edge technologies, says that spectrum is by nature abundant and that allocating, buying or selling parts of it will one day seem as illogical as, say, apportioning or selling sound waves to people who would like to have a conversation.

The traditional mindsets were colourfully on display this week when full details were announced of a complicated spectrum swap arranged by America's telecom and media regulator, the Federal Communications Commission (FCC). First announced on July 8th, the swap gave Nextel, America's sixth-largest mobile-phone carrier, new slices of spectrum in return for vacating other bands where it was causing interference with the radios of firemen, police and hospital workers. If it wins final approval, the deal will cost Nextel $3.25 billion. It follows years of what Michael Powell, the FCC's chairman, called ?ruthless lobbying?. Nextel's rivals threaten to contest the decision, screaming that Nextel got a windfall of public property. Verizon Wireless, America's largest carrier, recently bought another piece of spectrum, in New York, for $930m.

A glimpse of the new mindsets, by contrast, can be had in any Starbucks coffee-shop where patrons connect to the internet through Wi-Fi, a technical standard (officially called 802.11) that does not have a government licence but operates in ?unlicensed? bands of spectrum in the 2.4GHz or 5.8GHz

range. These are bands which governments have deliberately set aside as, in effect, an experiment for new technologies such as Wi-Fi. Almost anything goes in these bands, and any interference?between Wi-Fi base-stations and cordless phones, say?is for vendors, not the government, to sort out.

On one side, therefore, are notions of radio frequencies as scarce resources that can be used by only one transmitter at a time and are worth lobbying and paying billions for; on the other side is the idea that any number of transmitters and receivers can peacefully co-exist on the airwaves and that spectrum should therefore be open to all?not individual property, but rather a commons. To understand this debate, one must look back at history; to understand its importance, at economics.

Slicing up the airwaves
For decades after Guglielmo Marconi invented the radio in 1897, the only way to send multiple radio signals at the same time was by transmitting them at different wavelengths. Radio receivers were dumb devices?copper coils, essentially?and if two signals came in on the same wavelength, the result was noise. So when America passed the Radio Act in 1927 and the Communications Act in 1934, and other countries followed with similar legislation, the reigning wisdom was that governments had to chop up the radio-frequency spectrum and give exclusive privileges in each band to avoid chaos: radio required central planning.

The next major change in this understanding came in 1959, when Ronald Coase, later a Nobel laureate in economics, argued that the market was far better than governments at allocating the scarce resource of electromagnetic spectrum, and that auctioning spectrum to the highest bidder was therefore superior to simply giving licences away. This fitted well with the Zeitgeist of the following decades, when economists such as Milton Friedman and Friedrich von Hayek won Nobel prizes for similar arguments in other areas of life. Starting in 1995, governments in America and Europe began selling spectrum by auction. Telecoms companies were the biggest buyers, mortgaging their balance sheets to get airwaves for a new generation of cellular services.

The underlying assumptions about the physics of electromagnetism had not changed, however. Devices were still assumed to be dumb, interference a fact of life and exclusive-usage rights a necessity. The only change is that today most governments run mixed regimes, doling out some licences for free and auctioning others. Not all that mixed, however: auctions account for only 2% of the radio-frequency spectrum (up to 300GHz or so) in America. Central planning, in other words, still accounts for 98% of the usable airwaves. Most of the spectrum is given to television broadcasting, military communications and other forms of dedicated content.

This dispensation represents a huge loss to society. James Snider at the New America Foundation, a think-tank in Washington, DC, estimates that America's airwaves would have been worth $771 billion in 2001 (when he last did the sums) if every licensee were to use his bandwidth for the service in most demand by the public. But licensees do not do this, or cannot because of

regulations. This means that about half of the total value of the airwaves is wasted on uneconomic uses?on extra broadcasting capacity, say, instead of more cellular communications.

It would be bad enough if most of the spectrum were being wasted on the wrong uses; in fact, much of it is not being used at all. According to one study, only four of 18 ultra-high frequency TV channels in urban Washington, DC, were actually in use when the study was done. In rural areas, the ?white spaces? of fallow spectrum are even more vast. An official at America's National Telecommunications and Information Administration, which manages all the spectrum used by the federal government (as opposed to the FCC, which regulates all other uses), once estimated that 95% of the government's spectrum is not being used at any given time.

Commons, minus the tragedy
The sheer waste of this system?the ?opportunity cost? of services and technologies not offered because entrenched interests are squatting on the spectrum?is behind the third major intellectual current, after central planning and property rights, in recent thinking about spectrum. Starting in the 1980s and gathering steam in the 1990s, there have been calls for ?open spectrum?, or a spectrum commons. These initially met with scepticism, since economists and most other people are familiar with ?the tragedy of the commons??the idea that a scarce resource will be inefficiently over-exploited (as in the case of over-fishing, the classic instance). For sceptics, the same fate would await the airwaves.

But this is wrong, says Kevin Werbach at the University of Pennsylvania's Wharton business school and founder of Supernova Group, a consultancy. He argues that the assumption that public sharing of spectrum would lead to chaos presumes that spectrum is scarce; but this reflects a flawed understanding of the physics of electromagnetism. A common myth about electromagnetic waves is that they bounce off one another if they meet. They do not. Instead, they travel onwards through other waves forever (even though they eventually attenuate to the point where they become undetectable). Radio interference, in other words, is not a physical phenomenon, but always and only a technological problem, the result of dumb radios and dumb antennae mixing the waves up after receiving them.

If devices are smart enough to distinguish between signals, says Mr Werbach, spectrum suddenly reveals itself to be not scarce, but abundant. Mr Werbach draws an analogy to acoustics. A well-attended cocktail party has a din of many voices speaking at once and on similar frequencies. But it is still possible for party-goers to have conversations and pick out individual voices?ie, sound waves?from the din, because our brains are equipped with powerful software for this task. There is no limitation in the spectrum of sound waves, only in the refinement of the human ear. The same can be true in the electromagnetic spectrum.

There are four broad categories of new technologies that could make this idea a reality. The first is called ?spread spectrum?, or ?wideband?. As both names imply, this is a way of spreading an electromagnetic signal

across wide bands of frequencies at low power, instead of booming a high-power wave through a narrow band. Wi-Fi is one good example of wideband technology?the large range of frequencies and the low power allow it to co-exist with cordless phones and other devices. Hopes are highest, however, for a new technology called ?ultra-wideband?, which will communicate by whispering its signals so softly across the frequency bands of other, higher-power transmitters, such as broadcasters, that these will not even notice the presence of another signal.

Another approach is to use ?smart? antennae. These are systems of multiple antennae that can ?aim? a signal in a particular direction (instead of radiating it out indiscriminately) or pick out a particular signal from background noise by calculating the wave's angle of arrival (for example, from a satellite instead of a source on the ground).

A third technology is ?mesh networking?. In a mesh, each receiver of a signal also re-transmits it. Every meshed laptop computer, for instance, in effect becomes a node or router on its network. This has three advantages. One is that, as with spread spectrum, signals can be sent at very low power, since they only have to travel to the next user's node, which will be hundreds of metres, instead of kilometres, away. Another is that each newcomer to the network not only uses, but also adds, capacity. A third is that the network will be robust, since traffic can be re-routed easily if nodes fail, the approach already taken by the internet.

Open-spectrum enthusiasts are most excited, however, about the day when radios become software-powered computers, or so-called ?cognitive radios?. This would end the limitations of dumb radios. ?Moore's law meets Marconi's transmitter,? says Kevin Kahn, research boss for communications at Intel, the world's largest semiconductor-maker, referring to the prediction, so far correct, by Gordon Moore, one of Intel's founders, that the number of transistors on a chip doubles every 18 months. Radios would double their intelligence every year and a half, in other words. They could learn to hop around on the spectrum to find quiet bands for transmission, to encode digital information in new wave forms, or to analyse incoming noise and pick out only the relevant signal. ?Communication is no longer a matter of frequency, but of computation,? says Mr Kahn. In effect, cognitive radios would play the part of human brains at noisy cocktail parties.

Back in the real world
A lot of breakthroughs still need to happen before these technologies become widespread and reliable. Enthusiasts who predicted that there would be Wi-Fi transmitters in every street lamp have backtracked. ?Hotspots? are mushrooming, and cities from Montpelier, Vermont, to Hamburg, Germany, are now stringing networks of them into larger ?hot zones? that blanket downtown areas and entire neighbourhoods with high-speed internet access, but this seems to be an option only for dense urban areas. Mesh networks, too, are still rare. Police and firemen and other city employees in Medford, Oregon, have this year started using a mesh network to connect to the internet while on the road, but very few ordinary consumers are meshers. Cognitive radios are still in the lab.

Incumbent licence-holders?and above all the telecoms firms that have paid billions in spectrum auctions?naturally use the immaturity of these technologies as their prime argument against a headlong rush away from the property model and towards a commons approach. ?Unlicensed spectrum is sounding like crack cocaine: the ultimate high that solves all your problems,? says Brian Fontes, a lobbyist who works for Cingular, America's second-largest mobile-phone company (and the largest once its acquisition of AT&T Wireless, a rival, is complete). But, ?prove that you're not going to interfere; I mean prove it, don't just say it,? he insists.

The fact is, Mr Fontes says, that there is still no way to guarantee quality of service in the unlicensed bands. Yet guarantees are needed, if only for security. Such reminders are in the economic interests of Mr Fontes's industry, but that does not make them wrong. Regulators think it would be dangerous simply to embrace open spectrum and unleash a free-for-all. Rather, they see their task as managing spectrum so that it usage remains as efficient as technology allows.

There are several ways to do this without adding new unlicensed bands. One clear and obvious step is to allow ?underlay?. This is a way of transmitting signals in somebody else's licensed band, but without disturbing the licence-holder in any way?for the incumbent, a bit like having a bird sitting in your garden. This could help to fill in the huge white spaces of unused spectrum. It could also ease the politics, since it will not be easy to persuade powerful and long-standing licence-holders to vacate their bands. With underlay rights, says Vanu Bose, the boss of Vanu, a firm that designs software-powered radios, ?the broadcasters don't even have to get off the spectrum they have now, because they don't use most of it.?

Another good measure for regulators is to make licences more flexible. This is perhaps most urgent in Europe, where the European Commission currently requires telephone operators to use a technology called W-CDMA as they build third-generation (3G) mobile-phone networks. In 2000 the carriers paid more than ?100 billion (then $125 billion) for these licences, and are only now rolling out services after experiencing technical flaws. Meanwhile, operators in South Korea, America and Japan have been able to launch 3G services using a rival technology, CDMA2000, that is more mature but is, in effect, banned in Europe. But licence flexibility needs to go even further. Ultimately, a mechanism for licence-holders to trade their rights on a secondary market, similar to a bond or commodity market, could lead to more efficient allocation.

Nonetheless, the share of unlicensed spectrum should rise over time in order to spur innovation. In America, where the FCC has been thinking about the potential of open spectrum since 1981, this idea is no longer controversial. Michael Powell, the FCC's chairman, has said that he would like to see himself more as a speed cop than as a real-estate agent, and makes clear his penchant for unlicensed bands. America's spectrum regulator essentially agrees: the National Telecommunications and Information Administration proposed on June 24th that both it and the FCC identify an additional 10MHz of spectrum for this purpose. The problem, in America as everywhere, is in the politics of choosing someone to evict.

A few pioneers profess indifference to the debate. Dewayne Hendricks, boss of Dandin Group, a wireless internet-access provider, does not care whether governments open up more spectrum because, ?all the spectrum we need is already in play.? He has already brought wireless internet to ?tall and uncut? places from Tonga to Ulan Bator, and says he is now in talks in Armenia. Most industry participants, however, are keen for more open spectrum. One opportunity that will present itself in many countries is the migration from analogue to digital television, which will reduce the bandwidth needed for traditional free-to-air broadcasters.

The sweet and low down
This is promising because broadcasters inhabit the best kind of spectrum, the equivalent of beachfront property. The lower an electromagnetic wave's frequency the better it is at penetrating rain, trees and walls, which is why television and FM radio tend to work in the basement, but why Wi-Fi signals have trouble with walls. According to the New America Foundation, the 1% of frequencies below 3GHz are worth more than the other 99% of spectrum between 3GHz and 300GHz.

Even a sliver of new unlicensed spectrum in the very low frequencies could therefore make an enormous difference. It could, for example, make possible a cheap alternative to cable and digital-subscriber line modems (for which roads have to be dug up and trees uprooted) in delivering high-speed internet access across ?the last mile? to the consumer.

?Amazing things have been done with Wi-Fi in garbage spectrum,? says Tren Griffin, who is in charge of spectrum matters at Microsoft. ?The pregnant question is: what if we took a tiny amount of good spectrum and repurposed it?? It might at last become feasible and economic to begin bridging the world's digital divide. If low-frequency spectrum became free for innovators, then business plans to bring connectivity to villages in India and China, as well as rural Montana, would soon follow. Lives in many places could one day be richer thanks to vibrations in the air.

Dear Nilesh and Friends,

HI!

I have few gizmo gifts ready, just put them too under the raffle. Just a bit of contribution from my side for my MARs friends.

I have a marriage in family on 8th DEC my brother and youngest in our generation too. Just a request and hope it does not clash.

As my good friend Huzefa would say " Inshallah HAFEST hum sab saath manayenge"

ham (P) Pronunciation Key (hm)
n.

The thigh of the hind leg of certain animals, especially a hog.
A cut of meat from the thigh of a hog.
The back of the knee.
The back of the thigh.
hams The buttocks. (are we hams ??? oh no.... we are amateur radio operators.)
A performer who overacts or exaggerates.
A licensed amateur radio operator.

Untitled Document
Mumbai Amateur Radio Society

Dear Friends,

You are aware that we have the honour of hosting the "HAMFEST INDIA 2004" in Mumbai.

A special dedicated team of volunteers of our society are working hard to make this event a memorable one. We plan to a 3 day Hamfest in the month of December 2004. (The dates and venue will be announced by end of this week).

To organize and good hamfest we have estimated a budget of approximately Rs. 15 - 20 Lakhs. We hope to collect this funds by way of Sponsorships, Advertisement,Donations, Raffle Tickets, Registration charges, Stall charges etc... We are sure with the help of all our members and well wishers we will meet our target.

In order to generate some working capital, the Hamfest Committee has decided to have a Raffle Tickets draw.. The Raffle ticket will be of Rs.1000/- (One Thousand Only) each. There will be only 150 tickets... The society will account this money as donation for the hamfest and therefore it will issue a 80G certificate to you, which will give you 50% Income Tax exemption... so technically you pay Rs.500/- per ticket...

This Raffle ticket draw is for MARS members only, you may opt for 1 or more tickets, it is up to you.. We plan to have next raffle ticket draw, which will be open to all hams registering for the Hamfest..

The Raffle Tickets draw will have following prizes :-

1. ICOM - IC-706 MKII G (HF/VHF/UHF) mobile set -------- 1 Unit.

2. ICOM - V8000 (VHF 75 Watt) base station - 3 Units.

3. S.M.P.S - power supply for (HF /VHF) 20 Amps/ 13.8 DC... - 3 Units.

4. 5/8 antennae for VHF - 5 units.

==========

We have already sold 59 tickets...as under :-

1. nilesh rathod vu2nlf 10 tickets

2. micky korde vu2izo 5

3. prashant koli vu2cbu 5

4. kapil chandani vu2mig 5

5. roomy shroff vu2gte 5

6. aslam swl 5

1878. HAMFEST INDIA 2004 - Mumbai

Yahoo group: m_a_r_s
Date: 2004-08-17 06:37:19 UTC
From: Ajoy
Topic: 1878 Message: 1878

Dear Members of MARS & Organisers of
HFI 2004- Mumbai,

Nice to read abt the raffle tickets and attractive prizes. Well, it is time that regular posting on the vuhams@yahoogroups and other electronic media should start now, so that you will have a very good participation from hams not only from different states of India but also abroad.

As the HAMFEST INDIA 2004 is our countries biggest ham radio event, I personally wish the organisers to take personal interest to make it the most attractive event. Once, you fix up the venue and decide upon the registration fees/form, I am sure you will have a pileup to handle.

Wishing one and all the very best,

I remain crossing the finger - anticipating the best efforts from all the amateur (Ham) radio volunteers.

de Lion Ajoy - VU2JHM
Life Member, MARS &
Delegate # 1, HFI 2004.

Subject: New address for Amateur Section in WPC

Dear Friends,

The Amateur Section of WPC Wing has moved again!

This time it has moved to Room No. 521 in Sanchar
Bhavan.(Earlier it was Room No.619)

The latest address for Amateur Radio purposes is:

Asst. Wireless Adviser
Government of India
Ministry of Communications & Information Technology
Department of Telecommunications
WPC Wing, Amateur Section
521, Sanchar Bhawan
New Delhi 110001

Mr.Irshad Ahmed is the Engineer looking after Amateur
Radio matters.

His phone no is : 011-2303 6181
Fax No. is 011-2371 6111
Email

Till their next changes,

73,

Jose, VU2JOS

Hi All,

OM Mehul Chovatia,VU2ICQ, had submitted his resignation from the post of Secretary and also from the Managing Committee, and the same has been accepted by the Managing Committee of MARS.

OM Huzefa Merchant,VU2HIT, has also submitted his resignation from the post of Chairman and also from the Managing Committee, and the same has also been accepted by the Managing Committee of MARS.

The Managing Committee of MARS would like to thank, both ICQ and HIT, for services rendered by them.

Friends, this being very important year of HAMFEST,we need to fill in the vacuum urgently and immediately.

It is further informed that consequent to the resignation of VU2ICQ, the Managing Committee has unanimously decided to co-opt OM Nilesh Rathod,VU2NLF, as Secretary with immediate effect.

Decision about appointing new Chairman will also be communicated to you very soon.

> Dear MARTIANS,
I was recently told to buy raffle tickets, idea is
good and i was told this particular first raffle is
for members only, but if people who are buying and are
unable to clear their dues of fees, but buying
tickets, this seems un fair to members who have their
dues cleared ,and compete with , defaulting members ,
only if this draw is termed as open for all then its
upto people whether to buy tickets or not . please
look into the issue and lets be fair , some action on
this issue might motivate me to but raffle tickets.

1888. Let's bring things to order

Yahoo group: m_a_r_s
Date: 2004-08-23 12:39:47 UTC
From: vu2nlf
Topic: 1888 Message: 1888

Mumbai Amateur Radio Society
Dear Members,
You may be aware that I have once again taken the charge of the society as the Secretary? It is time that we bring thing back to order? starting with as Mukesh - VU2UGJ has rightly pointed out with the membership dues to the society?
All ordinary members who have not paid their fees are requested to immediately clear their dues.. the Onus is on you and not on the society to collect your dues.. This is your society and therefore please be responsible and start contributing to the efforts of the society by clearing all your dues.
Please note that I will personally not allow any members to participate in society?s activities who has not cleared his/her dues.. this also includes all the monthly meetings of our society?
All the members opting for the Raffle tickets for our Hamfest India 2004, will first have to clear all their dues.. All members registering for the Hamfest all must clear their society dues?
All students who are waiting for their tickets also should pay us their membership fees, Society WILL NOT do your police clearance and licence processing for defaulters which please note?
Our society is offering great service to its members, and we would therefore appreciate if you will cooperate and clear your dues it your earliest.. members are requested to send their payment by cheque in favour of ?MUMBAI AMATEUR RADIO SOCIETY? to our Treasurer Mr.Prashant Koli ? VU2CBU? Please also note that our annual membership fees is now Rs.500/-
All our future programme and activities will be informed to you very shortly..
73
Nilesh ? VU2NLF,
Secretary, MARS..

1889. Congratulations

From: Shantanu Chand
Topic: 1889 Message: 1889

Dear SWLs,

Congratulations for completing one year of your exams.It was exactly one year from today on the 25th of August last year when the gateway and zaveri bazaar bomb blasts took place. We all were at Dnyansadhna College doing our ASOC exams.I got a call from my XYL telling me to come home immediately.We still had our morse transmission test to be done and i fought with her that i must finish what i started. a typical case of HAM over home.

I would like to take this opportunity to thank all the senior Hams who took out time from their busy schedules to patiently teach us every sunday for 3 months everything about ham radio.

A special thanks too to all the hams who have silently worked in the background to push all our paperwork and speed up the police inquiries.

So now ladies and gentlemen, fellow SWLS, i believe that all police inquiries are over and the impatient wait for the tickets begins. At this juncture I am sure we all are itching to get on air. PLEASE keep that itch going as it is only a matter of time before the tickets arrive. We have put in so much hard work to get the tickets and so we should all be on air soon. At this point I would like to stress that we should have the largest number of SWLs on air once our tickets come. We have to now put all our work into practice soon. The batch of Mars Academy 2003 should have the largest number of check ins into the Night Owl's Net. Let us show our dear net controllers VU2WLL and VU2NFS that their efforts of conducting the net should not go waste.

I once again thank all that have put in so much effort to get us SWLs on air as soon as possible.

Keeping up with the Olympic Spirit I say " Let the Games Begin"

Looking forward to meeting you all on air.

Cheers and 73

Shantanu Chand
SWL and ticket holder in waiting

1890. Re: [m_a_r_s] Congratulations

From: Ankur Puranik
Topic: 1889 Message: 1890

yea " happy waiting aniversary to all swl's !!!" .. but its the first and the last one.....

the wait is gonna end veryyyy soon...

I too would like to thank all " our " senior VU2's & VU3's for the sincere efforts they have put in to get our tickets soon.... Yes it must be a real a painful job ...conducting the classes for so many people also ..coordinating with so many Govt. officers and students and getting the required documents from them & sending them over to various locations...and much more...

like VU2NLF rightly says "tum aam khao na , ped kyun gintey ho ".....

so alteast its our duty to make good use of our tickets.

We should be proud that we are HAMS (swl's ..to be hams) and use our right to get on air which NOT any tom dick n harry has.

1 in 67,000 people is a ham of total population of india which is 1,027,015,247.

so we can say we are "lakhon mein ek".....BE PROUD!

IM PROUD OF BEING A HAM* PROUD TO BE A MARTIAN !!!

* to be ... very soon.... conditions apply :)

1895. "The Beeb" to air program on Amateur Radio and 9/11

Yahoo group: m_a_r_s
Date: 2004-09-04 20:34:43 UTC
From: Sandip Adiwarekar
Topic: 1895 Message: 1895

News from Wireless Institute of Australia - (Sep 1, 2004)

BBC Radio 4 this weekend will air a documentary on Amateur Radio's involvement in the September 11, 2001, terrorist attacks.

The half-hour program, "Unsung Heroes," will be broadcast Saturday, September 4, at 1030 UTC. It will remain available on the BBC's archives for one month after that. "Through moving interviews, sensitive use of ham radio transmissions and some harrowing accounts, 'Unsung Heroes' reveals the little-known story of the 9/11 ham radio operators who provided vital communication networks for the rescue agencies," the BBC program listing says.

"Hams, often mocked for their obsessive hobby, believe that September 11th became Amateur Radio's finest hour. Stephen Evans, the BBC's North American Business Correspondent, witnessed the attacks that day and meets with ham operators who witnessed the terrorist attacks or lost friends and relatives on September 11th and still helped to support the search-and-rescue operation." Mark Phillips, KC2ENI/G7LTT, says the program, produced by Kate Bissell, features N2NOV, KF2EO, KE2UN AB2IZ, "and a whole host of others," including himself.

It was recorded during the last week of June. The program will also be available in MP3 format on Phillips' Web site starting September 4th.

1897. "roger "

Yahoo group: m_a_r_s
Date: 2004-09-06 08:09:06 UTC
From: Ankur Puranik
Topic: 1897 Message: 1897

What's the origin of the phrase "roger"?
John Vapensky handed me a little scrap of paper in the hall one day asking about the radio-telephony expression Roger. The origin of this phrase, which means "Yes, O.K., I understand you" dates back to the earliest days of wireless communication, when the Morse code letter R (dit-dah-dit) was used to indicate "O.K.--understood." As communications advanced to include voice capabilities, the military alpha code (Able, Baker, Charlie, etc.) was used as a logical extension of such single character responses. R = Roger = understood.

English
Allied Services (1945)

Able, Baker, Charlie, Dog, Edward, Fox, George, How, Item, Jig, King, Love, Mike, Nan, Oboe, Peter, Queen, Roger, Sugar, Tape, Uncle, Victor, William, X-Ray, Yoke, Zebra

Of course, you always hear "Roger, Wilco, Over and Out" in terse military dramas. The additional verbiage means (Wilco) "Will Comply", (Over) "Message Complete--Reply Expected", and (Out) "Message Complete--No Reply Expected".

1903. Alaknanda River Expedition

Yahoo group: m_a_r_s
Date: 2004-09-10 04:33:02 UTC
From: Shantanu Chand
Topic: 1903 Message: 1903

Dear Friends,

My river rafting outfit, Aquaterra Adventures, Is offering a multi day river expedition on the Alaknanda River. This trip starts and ends in Delhi. those intersted may contact the company directly at the address given below or me. I will try and work out a discount for MARS Members.

Details of the trip:-

THE ALAKNANDA RIVER RAFTING EXPEDITION - Sep 20-24, 2004

A self contained multi-day river adventure down the Alaknanda & Ganga rivers. The trip starts from our base camp on the Ganges river near the pilgrim town of Rishikesh. A scenic drive for 4 hours takes us past the town of Devprayag, where the Alaknanda and Bhagirathi rivers meet to form India's holiest river, the Ganga. We reach Rudraprayag, which is on the road to India's holiest shrines for the Hindus, Badrinath and Kedarnath. Rudraprayag is at the confluence of the Alaknanda and Mandakini rivers, and this is where our multi-dayer begins. Rudraprayag is possibly best known for the infamous man-eating leopard shot down by Jim Corbett in 1932 in its forests. Journeying 128kms to Rishikesh, the run takes you through thick forests and deep gorges, ending each day at a different river beach to make camp for the night, enhancing the adventure of being on the river. Foaming rapids, sandy beaches and starry nights make this a truly outdoor trip, even for the first time rafter.

DAY 01 : (20.09) Mon
An early morning transfer to Camp Silver Sands by road/rail (5-6 hrs). You could spend time sight seeing in Rishikesh and reach camp in the evening.

DAY 02 : (21.09) Tue
An early morning drive to Rudraprayag (5 hrs), the put in point. Enroute we stop at Devprayag, to see the confluence of the two rivers (the Alaknanda and the Bhagirathi) which meet to form the Ganga. After Lunch, help in getting the rafts readied and packing bags. Expedition begins with a big Grade IV rapid, "The Holy Hole", at the confluence with the Mandakini. Camp after about 2hrs on the river at Venturi Beach.

DAY 03 :(22.09) Wed
Raft past the Temple Rapids and the town of Srinagar. Soak in the sun, river and scenery, staying alert to help negotiate rapids. Beach out close to the village of Maletha.Campfire dinner and overnight Camp.

DAY 04 : (23.09) Thu
Raft down to Devprayag, the confluence of the Alaknanda & Bhagirathi rivers. The river is now called the Ganga. Camp at Beas Ghat, a famous fishing spot for the mahseer, also called the Ganga Gold. Cover 30 kms for the day.

DAY 05 : (24.09) Fri
A relaxed day with few rapids. A day for swimming, body surfing, relaxing and spotting wildlife. Make 30 kms to reach camp Silver Sands below Kaudiyala, after running a couple of

Grade IV rapids, "Daniel's Dip" and "The Wall". Hot lunch at camp. Pack up and leave for Haridwar to board the evening 6pm Shatabdi to reach Delhi by 10:45 pm. Trip ends.

Cost per person : Rs. 7300 (trip cost) + 2700 (transport cost) = Rs. 10,000/-

Cost includes : all travel from Delhi and back to Delhi by road/ rail as applicable (by non ac car / 2 or 3 tier ac coach), all arrangements for staying and camping while on the trip, accommodation on twin share basis in tents / rest houses / hotels, all meals, professional guide fee, all rafting, kayaking and safety equipment with india?s most experienced guiding team, camp staff, cook etc.

Cost excludes : railway station / airport transfers in delhi, any stay and meals in Delhi, sleeping bag, items of personal clothing, expenses of a personal nature like laundry, phone calls, alcohol, ciggarettes, insurance; any costs arising out of unforeseen circumstances such as bad weather, landslides, road conditions and any other circumstances beyond our control.

Booking conditions : All bookings are subject to availability of space at Camp. We book space on a 100% advance. All payments by wire transfer, cash or cheque/draft in favor of "Aquaterra Adventures (I) Pvt. Ltd."

Topic: 1906 Message: 1906

SOUTH AFRICAN AMATEURS TRANSMIT DIGITAL VOICE ON HF

Three South African amateurs made what is believed to be the first successful transmission of a Digital Voice signal over HF amateur bands in the country. The Digital Voice signal was transmitted at 11:16 am on Sunday 8 August by Andrew Roos ZS1AN and received by Dennis Wells ZS1AU with technical assistance from Ettienne Vosloo ZR1AHW. The transmission took place on the 10m band, with an occupied bandwidth of approximately 2.3 KHz.

On Tuesday 10th August, Dennis and Andrew successfully exchanged signal reports on the 15 metre, completing the first known digital voice QSO in South Africa. The QSO was monitored by Sean White, ZR1BSD.

Digital voice is a new mode where speech is converted to digital data using a low-bitrate vocoder. The digital data is then transmitted using a high-speed modem, and the digital data is decoded to recover the audio at the receiver. Although still in the experimental stages, there is worldwide interest in Digital Voice, which can deliver very high signal-to-noise ratios over medium quality SSB channels.

The software used in this experiment was HamDream version 2.4, which is an open-source implementation of the Digital Radio Mondiale broadcasting standard that has been adapted for amateur use by HB9TLK. It can be downloaded free of charge from the SARL website, click here. For more information, see HB9TLK's website, www.qsl.net/hb9tlk.

All you need to explore this fascinating new mode is a PC with a full-duplex soundcard, a soundcard/rig interface like those used for PSK-31 and similar digital modes, and a PC headset and microphone that can be purchased at any computer store for about R 100. So get QRV on digital voice and join the fun! Andrew and Dennis are keen to make contact with other divisions using this exciting new mode. If you would like to arrange a sked please send email to Andrew, zs1an@... or Dennis, zs1au@....

Andrew will be giving a talk on Digital Voice at the SARL "Radio Technology in Action" Hamfest at the National Amateur Radio Centre in Johannesburg on 21st August - see you there!

1907. RE: [m_a_r_s] HamDream version 2.4 - Software using sound card for Digital Voice Mode

From: vijay motwane
Topic: 1906 Message: 1907

Hi Sandeep,

That was an interesting article on digital voice transmissions on HF.

There has been a discussion going on, on this subject since quite some time.

Die hard HF enthusiasts feel that this could not be big fun, although you get reliable comms on HF this way. It is felt that it is allright for experimentation. We do not use our HF operating skills in this mode. Afterall it is a challenge to work a very weak analogue stn. on HF using our skills like right kind of microphones, filters of different bandwidths, using radio passband tuning and using other QRM fighting features cleverly, that are built into the radio.

Vijay, VU2VVP

Hats off guys-

An example of what can be achieved when members take an active interest in Society Activities.It was on this last Sunday that VU2OZO and VU2ANKUR (the member with the longest callsign anywhere in the world! :-)) conferred about doing this and by Wednesday they had photo evidence of their work.

Cheers to NLF as well of course

Bravo Zulu,
VU2MIG

Dear Friends,

Mumbai Amateur Radio SocietyYou are aware that our South Mumbai VHF Repeater (144.100 Mhz +) is now permanently shifted to Pruthvi Apartments, Altamount Road, (which is probably the higest location in Mumbai). The repeater is having a wonderful coverage, hence all the licenced members are requested to make good use of it...

A lot of efforts has been put in by our active members (ZRS,HIT,RIO,AIH,OZO,IZO, Ankur..any many others) so please don't let these efforts go to waste make the most of it...

Our Andheri and Thane repeater will also be operational by end of next week... use them and enjoy the hobby..

1935. You Know You're a Ham

Yahoo group: m_a_r_s
Date: 2004-09-23 06:30:05 UTC
From: VU2UGO
Topic: 1935 Message: 1935

You Know You're a Ham if :
a.. You buy electrical black tape in ten packs.
b.. You've stripped wire with your teeth.
c.. You've told your son that, "One day, all this will be yours", and he doesn't respond.
d.. You'd rather help a buddy put up a new tower than mow the lawn.
e.. You've grabbed the wrong end of a soldering iron.
f.. You start giving out RST reports when you are on the telephone.
g.. The propagation forecast means far more to you than the local weather forecast.
h.. The microphone or visual aids at a meeting don't work and you rush up to the front to fix it.
i.. You tell the XYL, when she notices a new rig in the shack, why that has been there for years.
j.. Your watch is set only to UTC.
k.. At night, when you pray, it starts off something like: CQ CQ CQ GOD DE (your call sign).
l.. You ever had to patch your roof after an antenna project.
m.. Ham radio magazines comprise more than 50% of your bathroom library.
n.. You ever put a GPS tracker in the XYL's car, just so you could watch her on APRS.
o.. You and the XYL took a cruise so you could visit the radio room.
p.. You ever tapped out HI in Morse on your car horn to another ham.
q.. You ever had an antenna fall down.
r.. Your teenager refuses to ride in your car because it looks like a porcupine.
s.. You know the Latitude and Longitude of your home QTH.
t.. You go into the local Radio Shack store and the clerk asks you where something is

1941. SWL s QRM ON 2 METRES (Onus is on all of us)...

Yahoo group: m_a_r_s
Date: 2004-09-25 12:24:36 UTC
From: vu2nlf
Topic: 1936 Message: 1941

Dear Sandesh,

Congratulations on the arrival for your Harmonic...

I totally agree with you about any SWL or any invalid licence holder should not be operating....I have requested the net controller to allow SWLs to operate only on 2 occasions (15th August and the other time when Ankur helped me putting up the repeater).. I never encourage illegal activities

You may be aware (since you are monitoring) that whenever Ankur or anyone else is operating illegally, I am not present on the air, as I am hardly active on VHF or HF.. I don't monitor, if I am present I will always make sure that the SWLs do not operate, I have personally requested our net controllers not to allow any SWLs and invalid licence to check in or to operate..

I am the secretary of our society, but I cannot be around on the air all the time to restrict the illegal users... We all licenced holders have to guard and follow protocol,, if you are frequency and hear any SWL operating, why don't you tell that person to stop transmitting... after all you are also responsible to guard our bands..

JPN was asked not to transmit, because after repeated reminders over the land line and offering him all the assistance to help him renew his licence he did not bother to do so, (he is required to have valid licence at all times especially since he is on our disaster management team, and he may need to mobolize any time).. We all must understand our responsibilities (hams and SWLs), why make NLF or any other person point out your mistakes...we must have self disipline, after all we are setting example for the next generation to come ... if our current SWLs are operating illegally now, I wonder how they will stop their next generation from transmitiing illegally..

MARS has always been lenient as compared to other societies.. we have always allow SWLs (only who have cleared their exams) to operate once in a while on occasions like Independence day, Ganesh Visarjan, JOTA and Scramble Team exercises..all this is done with the supervision of a senior ham present... this is to keep them interested in our hobby, while they are waiting for their tickets.. unfortunately some SWLs are taking advantage of our leniency and are also encouraged by our senior hams..

I again request all the SWLs to have a little more patience and NOT TO TRANSMIT...

Please note I am the secretary of MARS and not the Wireless Advisor, so please understand I am doing what I can to guard our band and avoid illegal operations, but onus is on all of us to guard and not only me ok.. I would

therefore request you that in case you hear any station operating illegally, please break in and make sure that the station stops transmitting..

73
NLF

Subject: [m_a_r_s] SWL s QRM ON 2 METRES

Friends
The purpose of writing this mail is to make all MARS members aware that an SWL called Ankur Puranik is regurarly transmitting on 2 metres without having any license nor does he have any call sign now this is something very annoying to me & some other hams, and the shocking fact is that there are many senior hams who are aware of this & are raghchewing with him ,he also checks into the nightowls net. sometime back when 2 of our hams viz JAIPRAKASH VU2JPN & MAHESH VU2IIA had QSY ed to their new qth, then our hon secretary OM NILESH VU2NLF had asked them on AIR not to transmit without getting the new adress on ticket, now the same person is allowing swl to talk on air, I fail to understand why such things happens. Iam not aware that about any other swls coming on 2 metres, but I feel that if such things are encouraged then we will have some other swls also on 2 mt. I remember the days when it took almost 3 yrs for me to get my ticket we didnt transmit even once nor did any of my friends.But today swls atleast get chance to come on air for jota, ganapati etc .I have no complaints for such occasions.
I now would like to request all hams not to entertain such things on air. Remember we started MARS to promote this hobby honestly & sincerely.
I hope iam not hurting anyones sentiments in this mail. Any hams should not take it personally particularly NILESH & ANKUR.
Any MARS member can correct me if iam wrong & can send reply on GROUPS .

To

All new and old hams

I am very glad to read VU2SXF?s &VU2NLF?s mail really we all have to protect our band from illegal operators. Day before yesterday when I was testing the VU2MIG?s rig in my QTH I was able to listen to repeater and the QSO between VU2IZO and Ankur I could not break in. Then I tried simplex and asked VU2IZO why Ankur is transmitting? He said I took permeation from net controller and they allowed to transmit I am very surprise how net controller can give permeation when they themselves are honest to HAM BAND and never allowed illegal transmitter (I remember early birds net). I personally feel that all SWL s must wait for tickets to come and believe VU2NLF who is working hard to get your tickets ASAP.

Please don?t take anything personal.

This is the matter of HAM BAND and not society so we all have to stick to our rules.

If someone heart by this mail I am very sorry. But fact is fact

73?s and all the best

HI! Sandesh

Congrats to you and XYL for the bonny baby.

As far as illegal activity is concerned this should be discouraged. However there is a provision under which a non call sign holder can modulate a HAM station under observation of a valid call sign holder . It is good to see people taking part in radio activity.

I suggest newcomers/ SWLs itching to operate to visit some nearby friends and modulate their station legally. Hope this will keep all happy.

Dear SWLs,
Harmful Intereference/Illegal Use of Wireless sets on our Bands could be reported to Wireless Monitoring stations in the area. It could be troublesome. Kindly avoid the use of wireless sets untill one gets the Licence to operate Amateur Radio station.

Pse have little patience for the Licence to arrive. NLF, HIT and there are many in MARS who are doing the best to get the licences well before the time. Even one of our MARS member visited WPC for your licences.No club in VU land is doing such a wonderful Job for swls.

Dear All,
Congratulations to all who were involved in the Ganpati Visarjan arrangements done by MARS.

A big thank you to all the HAMs and SWLs who contributed to the success of the event.

This was the first time I was involved, though for a very short time, assisting at the BMC and Lost and Found. It is truly an experience which I would like to repeat in the years to come and hopefully with more time on hand.

Thank you once again to all volunteers who worked as a well oiled unit to make this event a successful one.

3 July 2003
For immediate release New Regulations For The Amateur Services
By Michael Owen, VK3KI
WRC-03 IARU Observer Team Member

Introduction
On 4th July 2003 the World Radiocommunication Conference, Geneva, 2003 ended and on the following day, the 5th July 2003 the new international regulations governing the amateur and amateur satellite services, Article 25 of the Radio Regulations, that had been adopted by the Conference come into effect.

The language of many provisions in Article 25 as it was before 5th July 2003 was the language of many years ago, reflecting the priorities, structures and attitudes of a time long gone. Provisions such as requiring amateur stations to use "plain language", that communications be limited to messages "relating to experiments", and remarks "for which by reason of their lack of importance, the use of the telegraph service could not enter into consideration", the prohibition of "international communications emanating from third parties", though that provision "may be modified by special arrangements between the interested countries", the requirement for Morse Code, and a number of other provisions are to be found in Article 8 of the General Radio Regulations annexed to the International Telecommunication Convention, Madrid, 1932.

The IARU policy was to seek the simplification of the Regulations affecting the amateur services by removal of regulations that were no longer necessary, the removal of provisions that were redundant because the subject matter was covered elsewhere in the Radio Regulations, the updating of provisions to reflect today's attitudes and activities, the identification of some standards for the qualification of amateurs and the addition of provisions that encouraged amateurs to be given the ability to provide emergency communications and to encourage the international recognition of amateur licences.

The Radio Regulations, the international regulations, define the fundamentals of the amateur services, and regulate international communications between stations in the amateur and amateur-satellite services. Administrations may and do make additional regulations, and regulate in detail the amateur services in their country.

This article compares the previous regulations with the new regulations and attempts to identify what is new and what is different. It does not attempt to explain why the particular provision was adopted in a particular form, which is another story told elsewhere. The numbers used to identify provisions are the temporary numbers used by the ITU in the course of the WRC.

Banned countries list

The first provision of Article 25, the so called "banned countries" list is a provision that is to be found in the 1932 Regulations, and is almost the same as the previous regulation except that it is now expressed positively rather negatively. The provision reads:

25.1 Radiocommunications between amateur stations of different countries shall be permitted unless the administration of one of the countries concerned has notified that it objects to such radiocommunications.

That is a provision that has only a limited effect on most amateurs.

The balance of Article 25 is more directly relevant to the day to day activities of radio amateurs.

What may be transmitted by Amateur Stations

The old international regulation relating to what an amateur station may transmit was as follows:

"When transmissions between amateur stations of different countries are permitted, they shall be made in plain language and shall be limited to messages of a technical nature relating to tests and to remarks of a personal character for which, by reason of their unimportance, recourse to the public telecommunications service is not justified."

This dealt with two distinct matters, the content of messages and the encryption of messages.

The phrase "messages of a technical nature relating to tests and to remarks of a personal character" could be construed unnecessarily narrowly, and did not reflect today's world, and the qualifying phrase "which, by reason of their unimportance, recourse to the public telecommunications service is not justified" was both vague and uncertain, and certainly reflected a time when in most countries the common carrier was a government monopoly.

So, the old provision was replaced by a new provision as follows:

25.2 Transmissions between amateur stations of different countries shall be limited to communications incidental to the purposes of the amateur service, as defined in No. 1.56 and to remarks of a personal character.

The term "incidental to" is wide, certainly not requiring a narrow connection with the "purposes of the amateurs service" and as the "purposes" of the amateur service set out in the definition are "self-training, intercommunication and technical investigations", the subject matter goes much beyond "tests". The new provision much more accurately reflects what in fact is the subject matter of amateur transmissions today.

Coded Messages

It is assumed that the phrase in the old provision requiring transmissions to be in "plain language" meant something transmitted by either voice or Morse that anyone could hear and understand. But today amateurs use many codes, and so what is meant by the phrase "plain language" could become a question in some countries. The language is no longer really appropriate. And, in any event a total prohibition is not appropriate as encryption is required for the control of satellites by command stations.

The requirement is not for "plain language" but a prohibition of messages encoded for the purposes of obscuring their meaning.

So, the simple phrase in the old regulation was replaced by a new provision, as follows:

25.2A Transmissions between amateur stations of different countries shall not be encoded for the purpose of obscuring their meaning, except for control signals exchanged between earth command stations and the space station in the amateur satellite service.

The IARU had suggested that it would be desirable for the exception to be expressed more widely than limited to satellite control signals, but a number of countries resisted this for security reasons. Of course the provision applies only to international communications. Therefore, repeater control signals, which are almost invariably transmitted within a single country and so are subject to national rather than international, regulation, may be encoded unless prohibited by national regulation.

"Third party" messages
One of the most difficult areas was the old provisions dealing with so called "third party messages." The provisions were as follows:

It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties.

The preceding provisions may be modified by special arrangements between the administrations of the countries concerned.

That prohibition of international communication on behalf of third parties is very wide. What is a communication on behalf of a third party? School children speaking to an astronaut is a communication on behalf of a third party, as is participation in the Jamboree on the Air. The provision inhibited preparation for disaster communication, and indeed, international disaster relief communications unless a special arrangements were in place between the two countries concerned.

The requirement that the prohibition could be modified by "special arrangements between the administrations of the countries concerned" was slow and clumsy, in many countries involving the ministry responsible for foreign relations.

The IARU suggested the suppression of both provisions, taking the view that each administration was fully empowered to regulate its amateurs, and in particular to define what communication could and could not be carried by an amateur station both nationally and internationally.

Of course, the fundamental requirement that the amateur service is non commercial is to be found in the definition of the amateur service and Article 25.2 set out above.

The new provision reads as follows:

25.3 Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. . An administration may determine the applicability of this provision to amateur stations under its jurisdiction.

The exception to the blanket prohibition for cases of emergency and disaster relief is important, and when read with the new provision intended to encourage emergency communication by amateur stations will hopefully lead administrations to adopt new regulations to facilitate such activities.

This second sentence of this provision enables each administration to define what is a communication on behalf of a third party, and with whom the stations under its jurisdiction may exchange such communications. If the other station's administration permits the same communication, then the communication may be exchanged internationally.

The removal of the requirement for bilateral agreements between countries is significant as the new regulation certainly provides the means by which each administration can permit many activities, such as disaster relief, practice for emergency communication, and educational communications to take place internationally.

Morse Code
The old regulation that Morse was a requirement for the operators of amateur stations below 30 MHz was found in a provision that read as follows:

Any person seeking a licence to operate the apparatus of an amateur station shall prove that he is able to send correctly by hand and to receive correctly by ear texts in Morse code signals. The administrations concerned may, however, waive this requirement in the case of stations making use exclusively of frequencies above 30 MHz.

That was replaced with a provision giving each administration the right to decide whether or not Morse is a required qualification as follows:

25.5 Administrations shall determine whether or not a person seeking a licence to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals.

The alternative of simply deleting the old provision was rejected because a number of administrations thought that the matter was so important that a positive decision not to require Morse as a qualification was appropriate. The effect is actually the same: Morse code is no longer an internationally required qualification for an amateur licence, though an administration may still require it.

The Qualification of Amateurs
Apart from the Morse code as a qualification, the previous regulation provided:

Administrations shall take such measures as they judge necessary to verify the operational and technical qualifications of any person wishing to operate the apparatus of an amateur station.

This was replaced by a new provision as follows:

25.6 Administrations shall verify the operational and technical qualifications of any person wishing to operate an amateur station. Guidance for standards of competence may be found in the most recent version of Recommendation ITU-R M.1544.

The reference to the Recommendation is a non-mandatory reference. That is, an administration is not bound to follow it, but it is expected that all administrations will take the Recommendation into account when setting the qualification for an amateur licensee.

The Recommendation is very general, for example providing that any person seeking a license to operate an amateur station should demonstrate a "theoretical knowledge of: Radio regulations, international, domestic", and under the heading "Radio system theory", "transmitters, receivers, antennas and propagation and measurements." Consistently with the decisions of the Conference, the Recommendation does not suggest any requirement for a Morse skill.

That accords with the IARU position that the Radio Regulations should give some guidance as to the qualification appropriate for an amateur licence, but should not attempt to set a syllabus, as the diversity of environments for which a standard must be set is very great.

The identification of a standard, the topics on which knowledge is required, reflects one of the essential elements of the amateur service, namely that an amateur is a person who has demonstrated an operational and technical qualification, distinguishing that amateur from many other users of the spectrum.

Power

The next provision in the new Regulations is:

25.7 The maximum power of amateur stations shall be fixed by the administrations concerned.

That is almost the same as the old regulation, but with the words after those words in the old provision being omitted, so the words "having regard to the technical qualifications of the operators and to the conditions under which these stations are to operate" are no longer part of the provision.
The application of other provisions of the Radio Regulations

Again, Article 25.8 is a shortened version of the previous article, and reads as follows:

25.8 All pertinent Articles and Provisions of the Constitution, the Convention and of these Regulations shall apply to amateur stations.

That changes the reference to "general rules" to "pertinent" provisions of the current ITU documents and omits the sentence "In particular, the emitted frequency shall be as stable and as free from spurious emissions as the state of technical development for such stations permits." which is unnecessary as the requirements apply to amateur stations in any event.

In reality, there is no change arising from the different wording. Probably the provision is unnecessary in any event, but it offered some assurance to administrations that amateurs will abide by all pertinent rules.

Call signs

Finally, a provision that is the same as the previous provision:

25.9 During the course of their transmissions, amateur stations shall transmit their call sign at short intervals.
Emergency Communications

Then, a completely new provision is included in Article 25, a provision that really needs no explanation.
25.9A Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.

That provision should be read in conjunction with Article 25.3, and it is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.
The international recognition of the licences of visiting amateurs

A further completely new provision is added to Article 25:

25.9B Administrations may determine whether or not to permit a person who has been granted a licence to operate an amateur station by another administration, to operate an amateur station while that person is temporarily in its territory, subject to such conditions or restrictions it may impose.

This provision has been interpreted by some to mean that an administration may, if it wishes, permit a licensee from another country to operate in its territory without issuing a licence, as would otherwise be required by Article 18 of the Radio Regulations. There is some substance in interpretation, as the provision deals with "permissions" and applies only to a person temporarily in the territory of the other administration.

The interpretation of the provision is, of course, a matter for administrations, but hopefully it is a provision that will encourage administrations to allow amateurs to enjoy their hobby while travelling by recognising the foreign licence. A global recognition would fill in the gaps left by the CEPT Recommendation T/R 61-01 and the International Amateur Radio Permit of the OAS.

The Amateur-satellite service

The final two provisions deal with amateur-satellite service, the first being unchanged and reading as follows:

25.10 The provisions of Section I of this Article shall apply equally, as appropriate, to the amateur-satellite service.

The next provision is the only operative provision in Article 25 dealing with the amateur-satellite service. The previous provision read as follows:

Space stations in the amateur-satellite service operating in bands shared with other services shall be fitted with appropriate devices for controlling emissions in the event that harmful interference is reported in accordance with the procedure laid down in Article 22. Administrations authorizing such space stations shall inform the IFRB and shall ensure that sufficient earth command stations are established before launch to guarantee that any harmful interference which might be reported can be terminated by the authorizing administration (see No. 2612).

The provision was unnecessarily complex, repeating obligations that are found elsewhere in the Radio Regulations, particularly Article 22.

In the end, the following simplified provision was adopted:

25.11 Administrations authorizing space stations in the amateur-satellite service shall ensure that sufficient earth command stations are established before launch to ensure that any harmful interference caused by emissions from a station in the amateur-satellite service can be terminated immediately (see No. 22.1).

The new provision avoids the repetition in different words of regulations that already apply to the stations, and simply requires that sufficient earth command stations are established before launch.

The Definition of the Amateur Service

When, in 1996, the IARU commenced its examination of the issues raised by placing Article 25 of the Radio Regulations on the agenda of a future World Radiocommunication Conference, it very quickly saw that the definition remained as relevant and appropriate as it had been over the many years that it been a part of the Radio regulations.

It is worth setting out that definition for the sake of completeness:

1.56 Amateur service: A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorised persons interested in radio technique solely with a personal aim and without pecuniary interest.

Similarly, the definition of the amateur-satellite service remains unchanged:

1.57 Amateur-satellite service: A radiocommunication service using space stations on earth satellites for the same purposes as those of the amateur service.

The Conference decided that no change was required to those definitions in Article 1.

Conclusion

The Radio Regulations are the written result of the welding together of the different views of different people with different languages and from different cultures. It is no doubt easy to say that some of the provisions could be expressed more elegantly, and that some of the provisions are not necessary.

Of course, it is true that the narrower provisions of the old international regulations have not really inhibited the amateur service in many countries, with administrations preferring a liberal interpretation. But in the long run, the amateur service cannot afford to have countries ignore the international regulations. It is fundamental that the amateurs have appropriate "operational and technical qualifications." A speed limit that is unrealistic and not enforced is going to be ignored. What was appropriate in 1932 may not be appropriate in 2003.

In the end it is suggested that the meaning of Article 25 is clear, even if expressed in language different from the language suggested by the IARU. What is important is the substance, not the form, and it is suggested that the changes and additions made to Article 25 by WRC 2003 will meet the needs for the future of the amateur service identified by the IARU.

Untitled DocumentMumbai Amateur Radio Society

Dear Friends,

Once again MARS provided communication support during Ganesh Visarjan quite successfully. A detailed report will be posted very shortly.

The Debriefing Meeting for the Ganesh Visarjan will be conducted on Sunday 3rd October 2004 at 10:00 AM at B.S.Bengelle Girls School, Churchgate. All participants are requested to attend the meeting on time.

The above meeting will be followed by the Hamfest Meeting, All Hamfest Team members may please attend.

1965. Ganesh Visarjan Report

Yahoo group: m_a_r_s
Date: 2004-10-01 15:32:46 UTC
From: Kapil Chandni
Topic: 1965 Message: 1965

Untitled Document
Hi All,

MARS pulls it off again!
Following its famous trademark rapid deployment of members and resources ,the Mumbai Amateur Radio Society, (MARS), had its very own Observation Tower at Chowpatty to keep a look out for situations of distress and emergency.Another team of HAMs and SWLs was keeping watch from the Life Guard tower working with a team of lifeguards from the Mumbai YMCA and other life saving societies under the aegis of Red Swastik,an umbrella organisation of such societies.An example of the varied repertoire of skills found in MARS,was the presence of VU2GYM and VU2LUB at the lifeguard tower.Both,VU2GYM and VU2LUB,in addition to being call sign holders are also fully qualified Lifeguards and were thus, well positioned to utilise their skill sets.

Other MARS teams were positioned for liasing with the BMC and First Aid Services.Observation teams were also operating from critical points along the route of the processions at CP Tank and Prarthana Samaj.These teams rendered yeoman service with their timely and accurate description of the arrival of various Mandals,rendering assistance to the massive crowds and helping to build up an accurate picture of the state of the vibrant ceremonial send off to Mumbai's favourite deity.

Like always,a few MARS members had the unparalleled experience of being at sea(literally) aboard various boats operated by life guards.Such cross-postings enable members to develop insights into the functioning of other emergency services as well as displaying MARS capabilities to future collabrators.VU2HIT,VU2RIO,Nilesh Dixit were among those who enjoyed sailing under the ink blue sky.

All the above teams were ably guided by a team of mature(not in age but in operating) ,experienced HAMS from Chowpatty Control.Chowpatty Control veritably functioned like a control room,relay station,a matchmaker for emergency services rolled into one.VU2NLF and VU2NHR were the calm and resourceful controllers from the station.

The event provided members with fantastic opportunities to hone their radio,public relations,management skills and have wonderful close up views of Mumbai's best Ganesh processions.

Mention must also be made of the ample supply of food and beverages for volunteers.Controllers and VU2HIT must be complemented for doing a timely job of arranging and delivering delicious food,snacks and beverages to the widely spread members with an accuracy rivalling that of the Cesium clocks at CERN,Geneva.

Lots of impromptu get togethers were held at Chowpatty Control discussing the nuances of classic rigs,anecdotes from the HAM world and plain admiration for the various Ganesh Mandals's artistic skills.

Chowpatty Control was finally shut down in the wee hours of dawn with a sudden realisation that yet another Ganesh Visarjan has come to a close.

Overall,it was a memorable event with tremedous learning opportunities for particpants both old and new.

Congratulations to VU2JPN,VU3AUA,VU2OZO and their teams for a wonderful espirit de corps.

MARS looks forward to more such events in the future with more such enthusiastic participants.

73s,

VU2MIG
Kapil Chandni

1966. Ganesh Visarjan Report

Yahoo group: m_a_r_s
Date: 2004-10-02 05:32:12 UTC
From: Shantanu Chand
Topic: 1965 Message: 1966

Dear NLF,

I regret to inform you of my inability to attend the meeting this sunday as i will be out of town. I am enclosing my report and my thoughts for future Ganpati Visarjans.

As you are well aware i was posted at the BMC wireless control with ASO (BMC) Ajit Tawde. I was also liasing with the police Lost and Found along with Napolean.

I have never worked with such a dynamic personality such as Napolean. He was inventive and resourceful and always on the run and never saying "no" to anything. Together we cleared 8 lost and found cases between 1430 hrs and 1730hrs, till i was relieved by SWL Pankaj Shah.

We cleared 8 cases of lost and found children, one case where a lady had lost her husband and he turned up in a few minutes.

All in all it was a great experience and i look forward to doing it all over again next year.

Just a suggestion at the end. We need to have a ham dedicated to the lost and found as running between BMC and Lost and Found was not convenient.

Thanks to all once again.

New 2m repeater on International Space Station

A new 2m repeater is now operating on the International Space Station 24x7 the uplink is on UHF 437.800 and the downlink is on VHF 145.800
No tone burst or CTCSS is required.The radio is a Kenwood TMD-700 operating in remote crossband mode.It just retransmits on VHF what it hears on UHF so if you are getting through you can hear yourself on the downlink. Anyone can work it using a co-linear.

To see where the space station is 'live' check

http://science.nasa.gov/temp/StationLoc.html

for 3 days in advance predictions download the pcsat decoder program

http://www.ui-view.com/uiview32/pcdec242.msi

When the ISS Repeater is being worked the audio may be streamed in the AMSAT conference server on Echolink so anyone, anywhere in the world can listen in.

AMATEUR RADIO- not a hobby, an obsession.

What is ARTS? It stands for the Amateur Radio Tolerance Society. And who should know more about that than our XYL's?

With the recent introduction of the RCC Award, the question was raised as to why there isn't an award for the ladies who put up with us hams. So, in response to popular demand, SPAR is pleased to announce the immediate availability of the ARTS Award for our beloved XYL's.

So, for those honest hams who want to show some appreciation for their long-suffering XYL's, the ARTS Certificate can be downloaded, printed, filled out and presented to their tolerant half. The certificate is on the SPAR web site at ARTS for the XYL.

The Society for the Preservation of Amateur Radio (SPAR) is pleased to offer a distinguished award for the many XYL's who patiently endure the Amateur Radio addiction of their spouses. We know, deep down inside, that many people could never live with a real ham, but our spouses somehow seem to accept us anyway. They have learned to accept that ham fests and ham shacks are a part of life.

Any normal woman would be offended by being referred to as an "XYL." But somehow a select few have learned to accept us, along with our radios, antennas, QSL cards and work benches with unfinished projects. They have learned to sleep through contests and DX chasing. They have accepted that the ducks that talk on our radios are really saying something and the funny beeps in the night are not aliens. They have at least offered an encouraging word while we put up the ugliest antennas they have ever seen and have even found a way to help budget our radios, antennas, books, software, gizmos and gadgets.

To these stalworth women, the few, the once proud, we offer an tribute in the form of full membership in the A. R. T. S., complete with a certificate suitable for framing. Heaven knows we'd like to give you more, but there's always another radio to consider and the amplifier you got for your birthday took most of our resources.

The certificate in PDF format can be downloaded, printed, filled out and presented to your XYL.

Thanks for tolerating us, ladies!

See the attachment.

3 July 2003
For immediate release New Regulations For The Amateur Services
By Michael Owen, VK3KI
WRC-03 IARU Observer Team Member

Introduction
On 4th July 2003 the World Radiocommunication Conference, Geneva, 2003 ended and on the following day, the 5th July 2003 the new international regulations governing the amateur and amateur satellite services, Article 25 of the Radio Regulations, that had been adopted by the Conference come into effect.

The language of many provisions in Article 25 as it was before 5th July 2003 was the language of many years ago, reflecting the priorities, structures and attitudes of a time long gone. Provisions such as requiring amateur stations to use "plain language", that communications be limited to messages "relating to experiments", and remarks "for which by reason of their lack of importance, the use of the telegraph service could not enter into consideration", the prohibition of "international communications emanating from third parties", though that provision "may be modified by special arrangements between the interested countries", the requirement for Morse Code, and a number of other provisions are to be found in Article 8 of the General Radio Regulations annexed to the International Telecommunication Convention, Madrid, 1932.

The IARU policy was to seek the simplification of the Regulations affecting the amateur services by removal of regulations that were no longer necessary, the removal of provisions that were redundant because the subject matter was covered elsewhere in the Radio Regulations, the updating of provisions to reflect today's attitudes and activities, the identification of some standards for the qualification of amateurs and the addition of provisions that encouraged amateurs to be given the ability to provide emergency communications and to encourage the international recognition of amateur licences.

The Radio Regulations, the international regulations, define the fundamentals of the amateur services, and regulate international communications between stations in the amateur and amateur-satellite services. Administrations may and do make additional regulations, and regulate in detail the amateur services in their country.

This article compares the previous regulations with the new regulations and attempts to identify what is new and what is different. It does not attempt to explain why the particular provision was adopted in a particular form, which is another story told elsewhere. The numbers used to identify provisions are the temporary numbers used by the ITU in the course of the WRC.

Banned countries list

The first provision of Article 25, the so called "banned countries" list is a provision that is to be found in the 1932 Regulations, and is almost the same as the previous regulation except that it is now expressed positively rather negatively. The provision reads:

25.1 Radiocommunications between amateur stations of different countries shall be permitted unless the administration of one of the countries concerned has notified that it objects to such radiocommunications.

That is a provision that has only a limited effect on most amateurs.

The balance of Article 25 is more directly relevant to the day to day activities of radio amateurs.

What may be transmitted by Amateur Stations

The old international regulation relating to what an amateur station may transmit was as follows:

"When transmissions between amateur stations of different countries are permitted, they shall be made in plain language and shall be limited to messages of a technical nature relating to tests and to remarks of a personal character for which, by reason of their unimportance, recourse to the public telecommunications service is not justified."

This dealt with two distinct matters, the content of messages and the encryption of messages.

The phrase "messages of a technical nature relating to tests and to remarks of a personal character" could be construed unnecessarily narrowly, and did not reflect today's world, and the qualifying phrase "which, by reason of their unimportance, recourse to the public telecommunications service is not justified" was both vague and uncertain, and certainly reflected a time when in most countries the common carrier was a government monopoly.

So, the old provision was replaced by a new provision as follows:

25.2 Transmissions between amateur stations of different countries shall be limited to communications incidental to the purposes of the amateur service, as defined in No. 1.56

and to remarks of a personal character.

The term "incidental to" is wide, certainly not requiring a narrow connection with the "purposes of the amateurs service" and as the "purposes" of the amateur service set out in the definition are "self-training, intercommunication and technical investigations", the subject matter goes much beyond "tests". The new provision much more accurately reflects what in fact is the subject matter of amateur transmissions today.

Coded Messages

It is assumed that the phrase in the old provision requiring transmissions to be in "plain language" meant something transmitted by either voice or Morse that anyone could hear and understand. But today amateurs use many codes, and so what is meant by the phrase "plain language" could become a question in some countries. The language is no longer really appropriate. And, in any event a total prohibition is not appropriate as encryption is required for the control of satellites by command stations.

The requirement is not for "plain language" but a prohibition of messages encoded for the purposes of obscuring their meaning.

So, the simple phrase in the old regulation was replaced by a new provision, as follows:

25.2A Transmissions between amateur stations of different countries shall not be encoded for the purpose of obscuring their meaning, except for control signals exchanged between earth command stations and the space station in the amateur satellite service.

The IARU had suggested that it would be desirable for the exception to be expressed more widely than limited to satellite control signals, but a number of countries resisted this for security reasons. Of course the provision applies only to international communications. Therefore, repeater control signals, which are almost invariably transmitted within a single country and so are subject to national rather than international, regulation, may be encoded unless prohibited by national regulation.

"Third party" messages

One of the most difficult areas was the old provisions dealing with so called "third party messages." The provisions were as follows:

It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties.

The preceding provisions may be modified by special arrangements between the administrations of the countries concerned.

That prohibition of international communication on behalf of third parties is very wide. What is a communication on behalf of a third party? School children speaking to an astronaut is a communication on behalf of a third party, as is participation in the Jamboree on the Air. The provision inhibited preparation for disaster communication, and indeed, international disaster relief communications unless a special arrangements were in place between the two countries concerned.

The requirement that the prohibition could be modified by "special arrangements between the administrations of the countries concerned" was slow and clumsy, in many countries involving the ministry responsible for foreign relations.

The IARU suggested the suppression of both provisions, taking the view that each administration was fully empowered to regulate its amateurs, and in particular to define

what communication could and could not be carried by an amateur station both nationally and internationally.

Of course, the fundamental requirement that the amateur service is non commercial is to be found in the definition of the amateur service and Article 25.2 set out above.

The new provision reads as follows:

25.3 Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. . An administration may determine the applicability of this provision to amateur stations under its jurisdiction.

The exception to the blanket prohibition for cases of emergency and disaster relief is important, and when read with the new provision intended to encourage emergency communication by amateur stations will hopefully lead administrations to adopt new regulations to facilitate such activities.

This second sentence of this provision enables each administration to define what is a communication on behalf of a third party, and with whom the stations under its jurisdiction may exchange such communications. If the other station's administration permits the same communication, then the communication may be exchanged internationally.

The removal of the requirement for bilateral agreements between countries is significant as the new regulation certainly provides the means by which each administration can permit many activities, such as disaster relief, practice for emergency communication, and educational communications to take place internationally.

Morse Code
The old regulation that Morse was a requirement for the operators of amateur stations below 30 MHz was found in a provision that read as follows:

Any person seeking a licence to operate the apparatus of an amateur station shall prove that he is able to send correctly by hand and to receive correctly by ear texts in Morse code signals. The administrations concerned may, however, waive this requirement in the case of stations making use exclusively of frequencies above 30 MHz.

That was replaced with a provision giving each administration the right to decide whether or not Morse is a required qualification as follows:

25.5 Administrations shall determine whether or not a person seeking a licence to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals.

The alternative of simply deleting the old provision was rejected because a number of administrations thought that the matter was so important that a positive decision not to require Morse as a qualification was appropriate. The effect is actually the same: Morse code is no longer an internationally required qualification for an amateur licence, though an administration may still require it.

The Qualification of Amateurs
Apart from the Morse code as a qualification, the previous regulation provided:

Administrations shall take such measures as they judge necessary to verify the operational and technical qualifications of any person wishing to operate the apparatus of an amateur station.

This was replaced by a new provision as follows:

25.6 Administrations shall verify the operational and technical qualifications of any person wishing to operate an amateur station. Guidance for standards of competence may be found in the most recent version of Recommendation ITU-R M.1544.

The reference to the Recommendation is a non-mandatory reference. That is, an administration is not bound to follow it, but it is expected that all administrations will take the Recommendation into account when setting the qualification for an amateur licensee.

The Recommendation is very general, for example providing that any person seeking a license to operate an amateur station should demonstrate a "theoretical knowledge of: Radio regulations, international, domestic", and under the heading "Radio system theory", "transmitters, receivers, antennas and propagation and measurements." Consistently with the decisions of the Conference, the Recommendation does not suggest any requirement for a Morse skill.

That accords with the IARU position that the Radio Regulations should give some guidance as to the qualification appropriate for an amateur licence, but should not attempt to set a syllabus, as the diversity of environments for which a standard must be set is very great.

The identification of a standard, the topics on which knowledge is required, reflects one of the essential elements of the amateur service, namely that an amateur is a person who has demonstrated an operational and technical qualification, distinguishing that amateur from many other users of the spectrum.

Power

The next provision in the new Regulations is:

25.7 The maximum power of amateur stations shall be fixed by the administrations concerned.

That is almost the same as the old regulation, but with the words after those words in the old provision being omitted, so the words "having regard to the technical qualifications of the operators and to the conditions under which these stations are to operate" are no longer part of the provision.
The application of other provisions of the Radio Regulations

Again, Article 25.8 is a shortened version of the previous article, and reads as follows:

25.8 All pertinent Articles and Provisions of the Constitution, the Convention and of these Regulations shall apply to amateur stations.

That changes the reference to "general rules" to "pertinent" provisions of the current ITU documents and omits the sentence "In particular, the emitted frequency shall be as stable and as free from spurious emissions as the state of technical development for such stations permits." which is unnecessary as the requirements apply to amateur stations in any event.

In reality, there is no change arising from the different wording. Probably the provision is unnecessary in any event, but it offered some assurance to administrations that amateurs

will abide by all pertinent rules.

Call signs

Finally, a provision that is the same as the previous provision:

25.9 During the course of their transmissions, amateur stations shall transmit their call sign at short intervals.
Emergency Communications

Then, a completely new provision is included in Article 25, a provision that really needs no explanation.
25.9A Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.

That provision should be read in conjunction with Article 25.3, and it is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.
The international recognition of the licences of visiting amateurs

A further completely new provision is added to Article 25:

25.9B Administrations may determine whether or not to permit a person who has been granted a licence to operate an amateur station by another administration, to operate an amateur station while that person is temporarily in its territory, subject to such conditions or restrictions it may impose.

This provision has been interpreted by some to mean that an administration may, if it wishes, permit a licensee from another country to operate in its territory without issuing a licence, as would otherwise be required by Article 18 of the Radio Regulations. There is some substance in interpretation, as the provision deals with "permissions" and applies only to a person temporarily in the territory of the other administration.

The interpretation of the provision is, of course, a matter for administrations, but hopefully it is a provision that will encourage administrations to allow amateurs to enjoy their hobby while travelling by recognising the foreign licence. A global recognition would fill in the gaps left by the CEPT Recommendation T/R 61-01 and the International Amateur Radio Permit of the OAS.

The Amateur-satellite service

The final two provisions deal with amateur-satellite service, the first being unchanged and reading as follows:

25.10 The provisions of Section I of this Article shall apply equally, as appropriate, to the amateur-satellite service.

The next provision is the only operative provision in Article 25 dealing with the amateur-satellite service. The previous provision read as follows:

Space stations in the amateur-satellite service operating in bands shared with other services shall be fitted with appropriate devices for controlling emissions in the event that harmful interference is reported in accordance with the procedure laid down in Article 22. Administrations authorizing such space stations shall inform the IFRB and shall ensure

that sufficient earth command stations are established before launch to guarantee that any harmful interference which might be reported can be terminated by the authorizing administration (see No. 2612).

The provision was unnecessarily complex, repeating obligations that are found elsewhere in the Radio Regulations, particularly Article 22.

In the end, the following simplified provision was adopted:

25.11 Administrations authorizing space stations in the amateur-satellite service shall ensure that sufficient earth command stations are established before launch to ensure that any harmful interference caused by emissions from a station in the amateur-satellite service can be terminated immediately (see No. 22.1).

Dear Friends,

In view of the fact that most of our members from Thane region are not attending our meetings, may be due to inconvienence of coming all the way to Churchgate.

To accomodate our members, we will be conducting our October meeting at Gyan Sadhna College, Thane on Sunday 10th October 2004 at 10:00 AM Sharp. All members are requested to attend the meeting on time.

Members who have not paid their fees may please come with the fees. members who are interested in taking the Raffle tickets, may also take advantage of this meeting.

All students from our last Thane Batch, may please attend and give their choice of call signs for their licences.

From: Shantanu Chand
Topic: 1974 Message: 1974

Dear Friends,
Yesterday i was visited by an International HAM at my morning QTH. He visited me with regards to my morning QTH but on entering my office he saw various literature on HAM radio lying on my desk. He then went on to introduce himself as I1HJT- Alfeo Caputo from Italy.

His DX callsign is II1H. US call K46STL and Lebonese call ODG/I1HJT.

He has already interacted with some HAMS in Mumbai and I had the pleasure of making him meet OM VU2NLF with whom he has been having an eyeball for many years.

He keeps coming to India on business and he has to meet me for the same. So the next time if any HAM is interested in meeting the number CW DXer of Italy, I would be happy to setup a common eyeball QSO with him.

Dear Friends,

I was going through the Indian Express Newsline this morning and saw that preparations for the Mumbai Marathon 2005 were in full swing.

This time the route has also changed from South Mumbai all the way to Bandra Reclamation. I was just wondering if MARS would be interested in providing communication to this event. If so this might be a good time to approach the organisers to find out how we can be useful during this mega event.

Hope this works out for the benefit for Amateur Radio.

1977. 47th World Jamboree On The Air

Yahoo group: m_a_r_s
Date: 2004-10-08 19:50:16 UTC
From: Sandip Adiwarekar
Topic: 1977 Message: 1977

Hi OMs/YLs,

MARS is happy to announce its participation in the 47th World Jamboree on the Air (JOTA) Event in association with Maharashtra State Bharat Scouts & Guides for the 5th consecutive year. The event is on 16th-17th October 2004.

So far we have received following names for the participation:

HAMs :-
Shailesh-VU2SFN, Mukesh - VU2UGJ, Basappa - VU2NXM, Kiny - VU3KNY, VU2GYM - Mohammed, VU2LUB - Mustafa, VU2SXF - Sandesh, VU2GBI - Gubbi, VU3PIT - Pitale, VU3MWH - Ananta, VU3ZNA - Zohar, VU2JPN - Jaiprakash, VU3AUA - Arun, VU2DGB - Dilip, VU3PPE - Pranav, VU2TPI - Tirandaz

SWLs :-
Variava, Ulhas, Anurag, Mukesh Vaidya, Saurabh Shah, Anish Pancholi, Andrews Kariyatil, Suren Shete, Mukesh Vaidya, Shantanu Chand, Nilesh Dixit

The location of this year's JOTA stations with the names of station-in-charge are as follows:
1. Scout Pavilion, Shivaji Park, Dadar - VU2HIT - Huzefa Merchant
2. Suman Nagar, Chembur - VU2OZO - Anish Korde
3. Sriram High School, Andheri - VU2HVK - Harsha Kallur
4. P.E. Society, Kopari, Thane - VU2CBU - Prashant Koli
5. Shanti Nagar, Meera Road - VU2UGO - Sandip Adiwarekar
6. K.B.Patil, Naigaon, Thane - VU2DGB - Dilip Bhandari

Everyone (those listed above as well as those who are not listed but willing to participate) are requested to attend the briefing meeting at 12.00noon (i.e. after monthly meeting).

For more info about JOTA event visit:-

de VU2UGO - Sandip
Event-in-Charge

Let's give 100%
What makes 100%?
What does it mean to give 100%?

Here's a little mathematical formula that might help you answer that.

If,
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
is represented as: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15
16 17 18 19 20 21 22 23 24 25 26

Then,
H-A-R-D-W-O-R-K
8+1+18+4+23+15+18+11 = 98%

But,
A-T-T-I-T-U-D-E
1+20+20+9+20+21+4+5 = 100%s

Dear Friends,

I was going through the Indian Express Newsline this morning and saw that preparations for the Mumbai Marathon 2005 were in full swing.

This time the route has also changed from South Mumbai all the way to Bandra Reclamation. I was just wondering if MARS would be interested in providing communication to this event. If so this might be a good time to approach the organisers to find out how we can be useful during this mega event.

Hope this works out for the benefit for Amateur Radio.

1980. JOTA 2004 Event Briefing

Yahoo group: m_a_r_s
Date: 2004-10-11 11:37:19 UTC
From: VU2UGO
Topic: 1980 Message: 1980

What is JOTA?
JOTA is an annual event in which Boy and Girl Scouts and Guides from all over the world speak to each other by means of Amateur (ham) Radio. Scouting experiences are exchanged and ideas are shared via radio waves. Since 1958 when the first Jamboree-on-the-Air was held, millions of Scouts have met each other through this event. Many contacts made during JOTA have resulted in pen pals and links between Scout troops that have lasted many years.

With no restrictions on age or on the number of participants, and at little or no expense, JOTA allows Scouts to contact each other by ham radio. The radio stations are operated by licensed ham radio operators. Many Scouts and leaders hold licenses and have their own stations, but the majority participate in JOTA through stations operated by local radio clubs and individual radio amateurs. Some operators use television or computer-linked communications.

When
JOTA is held the third weekend in October of each year, this year it's 16th - 17th October 2004. JOTA takes place starting Saturday at 0001 hours local time to Sunday, 2359 hours local time, though some activity continues over from Friday to Monday to take advantage of long distance (DX) time differences.

How Do We Take Part?
For details Contact the Station-in-Charge of the station nearest to your locaiton.

Station Requirements
a.. HF on 40/20/15M band (10M optional) & VHF on 145.000
b.. HF & VHF station in two seperate rooms manned by 2 peoples each (1 to operate & 1 to log contacts)
c.. Dress Code - MARS T-shirt/Cap/ID with Ponchos
d.. Banner - MARS banner at prominent location preferably 1 at station & another at entrance gate
e.. For Distribution - JOTA Brochure, MARS brochure, ICOM comic book, Phonetics / Morse Code Chart
f.. For Display - 47th JOTA Logo, QSL Cards, Amateur World Map, Books by Rajesh Verma / Saad Ali / Ham Radio Guild
g.. License Copy - Station-in-charge (ticket) & Temporary Shift of Station
h.. Code practice oscillator with Morse Key
i.. Photographs of your station
j.. OPTIONAL :
a.. Echolink Node (Multimedia PC/Laptop with Fixed Wireless Phone/GPRS)
b.. e-QSL Card (more info & free registration visit www.eqsl.net)
c.. Small recording clip of on-air QSO of scout/guide in audio / video format
QRV Frequencies :
a.. 40 meters 7.035 MHz
b.. 20 meters 14.290 MHz
c.. 15 meters 21.360 MHz
d.. 2 meter 145.000 MHz

Instructions for Station-in-Charge
a.. Contact the Scout Co-ordinator before the event
b.. Brief him about the event and hand over the JOTA brochure, MARS Brochure, ICOM comic book, Phonetic/Morse Code Chart etc. and ask him to make as many copies required for his location for display as well as for distribution.
c.. Have a look at the station location & co-ordinate the timings for setting up the station and the operating hours.
d.. Ask the Co-ordinator for necessary Help (e.g. transport for shifting the station, mast for the antenna, food arrangement etc.)
e.. Equipment borrowed for the event to be collected in advance, take enough precaution while handling it during the event & should be delivered back immediately in 'As-It-Is' condition after the event.
f.. While DXing look out for Scout Station Callsigns like HB9S, K2BSA, JA1YSS, PA6JAM, 5Z4KSA, VK1BP, GB2GP, XE1ASM, DU1BSP, TF3JAM etc.
g.. Give an opportunity to new ticket holders to talk on air and the SWLs under your presence only.
h.. After the event, fill-up the Report Form & submit it to Event-in-Charge with the Log Sheets & Photographs before 24th October'2004.
i.. Return the banners (2 nos.) & ponchos (4 nos.), remaining mars brochures to Arun-VU3AUA.
Instructions for HAMs/SWLs assisting Station-in-Charge
a.. Assist station-in-charge to shift & setup his station at JOTA location and vice versa.
b.. Follow the instructions of your station-in-charge.
c.. Help in organising the station
d.. Operate the station under the presence & guidance of station-in-charge.
e.. Maintain the log
f.. Explain 'ham radio' to scouts & guides, tell them about phonetics, morse code, Q-codes, answer their queries.

From: kiran padiyar
Topic: 1980 Message: 1983

Hi Sandip,
Very nice illustrated work. I can only count one other
event in recent MARS history which would have had such
nice instrunctions and info(i.e Fox hunt by ZRS).

Keep up the good work!

All the best
Kiran

1984. get the sukhoi's right into ur radios

Yahoo group: m_a_r_s
Date: 2004-10-12 11:58:18 UTC
From: Ankur Puranik
Topic: 1984 Message: 1984

Dear friends,

You all must me aware of the AIR SHOW scheduled on Sunday the 17th Oct 2004. The air traffic movements for this particular event can be heard on your radio*. The rehearsals are being conducted everyday between 3am to 5pm. During this time slot you can tune into your radios and listen to the complete air traffic QSO's.

To know the frequency please call me on 33853504

OR

SMS " your name " & the word " freq " to 33853504. and i will sms you the frequency.

If your are in the vicinity of the air activity then you can get them directly on your rubber duct antenna. (rubber ducky). Else you may have to connect an external antenna to receive the QSO' s in case the signal strength is weak. The conventional 5/8 /1/4 lamda or yagi which we normally use for 2 m will work well.

Since air traffic communications use horizontal polarization , you may have to tilt your antenna (make it horizontal) to receive these qso's more clearly. (if im mistaken pls correct me). Yagi owners will have to face the yagi in the right direction.

All the best!!!! happy sukhoing!!!

1987. Mumbai Repeater AND Echolink

Yahoo group: m_a_r_s
Date: 2004-10-13 18:40:09 UTC
From: Prashant Koli
Topic: 1987 Message: 1987

Dear friends,

Today i.e. on 13th October,2004, we were able to successfully connected Mumbai VHF Repeater to other VU repeaters like VU2NRO-R,VU2DLR (thru VU3GTF-R) and a DX repeater S21RB-R on ECHOLINK. Hams from Delhi,Dhaka checked into Night Owls net on 13.10.2004.

The experiment was possible due to the link provided by OM Mahesh,VU2IIA-L.

More on this later..... however, all Mumbai hams can look forward to have QSO's with hams from VU and DX land on 2 m on a regular basis.

Rgds,

Dear all,
It is very surprising that people are blatantly disobeying laws by encouraging others to tune into frequencies not alloted to us. (Hello SWL have you forgotten the rules?) Such acts only encourage others to take even more bold steps. First it was the issue of TX-ng w/o a licence and now openly telling people IAF frequencies by sms/ mail. What's wrong with MARS senior members? Why are you all turning a blind eye to such activities? If a SWL is so enthusiastic give him a direction to channelise his energies in the proper direction. If not nipped in the bud, such acts are going to have drastic repurcussions. Let's be responsible, PLEASE.

Hi:

Isn't all this downright illegal and irresponsible ?

I believe UGO had spoken quite a bit on ethics and moral responsibility, and such when teaching us Morse. I guess you guys just didn't listen...

Have you hot shots ever considered the bad name that you might get MARS founders and MARS members in general ? Why would the government/WPC now entertain MARS when we request them to clear our license applications ? And all the murmuring in India against MARS, and the murmuring within MARS about the active members woudl now only get more vocal.

It seems to me that all the big talk all these months about thanking MARS founders and seniors for the good work was just a grand mouthing of pieties..Get your licenses and then run around scot free, eh ?.. After all, who's to stop you ?

So, what's next ? Tutorials on playing havoc with the Police bands ? Broadcasting porn on the air ?

You know, I was thinking about this a bit after I sent the mail..

It is not uncommon in the computing world for true techies to apply their minds
in seeing how far one might stretch the limits of technology and computing.
Heck, I do such stuff all the time for my bread and butter.

But irrespoinsibility cannot be condoned at all. Especially, when you put
others at a risk.

I heard this profound statement in the movie "Spiderman" - "With great power
comes great responsibility". I hope you realize this soon.

1999. New Tickets

Yahoo group: m_a_r_s
Date: 2004-10-16 13:29:45 UTC
From: Prashant Koli
Topic: 1999 Message: 1999

Hi All,

I understand that few MARS SWLs are hams now.
Was wondering anybody can let us know who are these hams?So far I
know about VU2AXN,VU2SCQ only.
Rgds,
Prashant Koli
VU2CBU

2000. JOTA 2004

Hi,

Today on the first day of JOTA 2004, at P.E.Society's School,Thane,
265 scouts/guides appeared on the air thru VU2OZO-JOTA stn.

We did not have any scout/guide after 02.30 p.m. and contacted 01 DX
stn. and 05 VU stns.(excluding Mumbai stns.)till 02.30 p.m.

Would appreciate if other stns can give their tally.

Rgds,
VU2CBU

HI Prashant

Seems your charm works
from pathetic 20 only last year this year number has
increases more than 100% to 265 ,great show .

We at andheri sation , could make 217 scouts /guides
to go on air ,number is about 50 % less than usaual
number every year ,reason of exams being held was
given , but still i guess it was satisfactory number ,
given the fact we had only one day ,as there is no
session for us tommorrow.

but over all it was quite good ,and a new callsign
holder suren shette ,vu2 sfh ,who is the first one
this year batch to get his ticket ,could also operate
as full HAM this time.

2004. Andheri JOTA Station Report

Yahoo group: m_a_r_s
Date: 2004-10-16 16:59:45 UTC
From: harshvardhan_k
Topic: 2004 Message: 2004

Hello All,

This is a preliminary report on our JOTA activities
at Andheri (West) JOTA Station VU2UGJ.

Firstly, a big thank you to VU2UGO for organising a
pretty flawless event. A big round of applause to
VU2UGJ, VU2IVO, VU2SFH (for those of you who do not
know, that call sign belongs to Surendra Shete).
Also, SFH stands for Sadae Fundae Hardham - :)

Thanks are also due to all HAMs who participated in
this event and/or supported this event.

We set up our JOTA Station at Andheri (West) at
Shri Ram Welfare Society High School. Although, our
VHF and HF Stations were up before 0900 hrs (16/10/04),
we could only start operating at 11:30 hrs because of
the fact that examinations were being held in the school.

We operated the JOTA Station from 11:30 to 17:30 hrs on
16/Oct/2004 and a total of 212 Boy Scouts and Girl Guides
took part in the event. Unfortunately, as advised by the
Scout Leaders, we shall not operate the JOTA station on
17/Oct/2004 due to examinations. The event was well
attended by the Scout & Guide Teachers and by Mr. Shah
who is the District Chief Commissioner for Scouts &
Guides for North Mumbai Suburban. Mr. Shah managed to
have QSO with his counterparts in Bhopal with the help of
VU2ESY.

Due to bad band conditions, we only managed to contact
Bhopal (VU2ESY), VU2LFA (Delhi), VU2ARC (Bangalore) and
A47 (Muscat, Oman).

The event started with VU2UGJ and yours truly addressing
assembled Scouts and Guides. We briefly explained the
basics of HAM Radio to these students.

UV2IVO and VU2SFH expertly manned the VHF JOTA Station
while VU2UGJ was generally in charge of the HF JOTA Station
which he managed with his usual flair.

At about 16:30 hrs there were a group of about 20 parents
who also came to the event and VU2UGJ gave them a wonderful
presentation on HAM Radio.

Once again, a big thank you to all those who made this event
a success.

Cordially,

Harsh Vardhan KALLUR

2005. Re: JOTA 2004

Yahoo group: m_a_r_s
Date: 2004-10-16 18:00:05 UTC
From: Prashant Koli
Topic: 2000 Message: 2005

Hi Mukesh,

All credit to ensure number goes to Micky,VU2IZO, who relentelessly went to different schools to arrange a good sked for them.

Most of the students attended today was from the same school where this station is.VU2IZO's personal rapport with the Principal of the school, Mrs.Mangala Karandikar,helped us to see the number game.But alas! The school exams are commencing on 18th Oct. and today i.e. 16th Oct was actually a study leave (holiday)for the students.But to ensure compliance she kept one exam paper in the morning (changed time-table)so that parents will send their wards for the exam and on the other hand she instructed scout and guide teacher/s to ensure participation of scouts/guides in JOTA.

Three cheers to VU2IZO!!!

- Prashant,VU2CBU operating VU2OZO-JOTA stn.,Thane,Mumbai.

Friends,
Back to VU2IZO. He has arranged skeds of schools,in consultation
with Mrs.Almeida.the Scout/Guide station-in-charge, in such a way
that schools where exams are getting over by 16th Oct. will only
attend on 17th Oct.The turn out may be less however.
Great going so far....

Hi all,
I am quite amused at all the comments on what "Seniors", "Founders", and other members should do or not do!!! C'mon people, we are just members of a group practicing a common hobby and not the Moral Police!!!!!!!Have'nt you guys ever turned the knob of the radio from one end to another, trying to hear all sorts of voices? The only difference maybe with the rest and Ankur is that he was an eager guy who spoke about his monitoring, while the rest, I bet do it too, but don't talk about it. I dont think any of the youngsters or new hams are so dumb as to press the PTT on defence frequencies because they can definitely be caught and jailed for ever!!!
As a parent who has grown up kids, my experience says that the more you try being "Moral Police", the more the youngsters try to do "masti". Instead of yelling and screaming, try talking it out. It always works. If it doesnt, then grin and bear it!!!
Bottom line, if you want to scream at someone, do it, but dont question other people's responses. All are not alike!!!
I am just back from an International YL Meet in Korea where I had a great time with 100 other YLs!!
Cheers,
Sarla

Hi All,
It was a matured and satisfying answer to all the
questions we youngsters might have, Sarla.
I understand and agree with what you say and believe
others also agree with you.

All of the YM OM YL s who don?t know me I am one of
the inactive voice on air, but active listener since
age 12. I have always wondered and listened to strange
frequencies. One thing I kept in mind was not to
utilize or spread content of what I heard.

Please keep this(yahoogroup) channel open for useful
thoughts and insights about advancing world of Amateur
Radio, it?s all about fun guys whether you talk or
not.

Thank you
Kiran

I've met Sarla once, and yes, I will immediately admit that she must be a very good Mom.

However, I did not see any gentle rebuke or ticking off at all.

> All of the YM OM YL s who don?t know me I am one of
> the inactive voice on air, but active listener since
> age 12. I have always wondered and listened to strange

You know, I've been a computer hardware technician, and am a self-taught programmer. I work as a developer today. And one of my official responsibilities is to explore how far I can stretch technology.

However, I also work in the field of Industrial Automation, where we believe in "safety first". No one believes in fooling about with lives.

"Hey, this is just a hobby !", you might say. Sure. But what assurance do we have that some member might _not_ press the PTT (at the very least) ?

Did you attend the Hamfest in Gujrat last year ? Far from maintaining decorum, grown up MARS members were busy throwing papers at other people in the audience. When folks cannot be expected to just sit quietly or leave the hall, how can you expect them to maintain discipline at all times ?

You know, I personally have a good opinion of Ankur as a techie. I was to have worked with him / Nilesh Malpekar to get the Packet Radios working. But broadcasting such knowledge is wrong.

He's been blessed with curiosity and perseverence. These are gifts and must be used responsibly.

> Please keep this(yahoogroup) channel open for useful

Yes. But reminding ourselves of where to draw the line should also be a part of advacing this wonderful hobby, IMO.

Would you believe how dumb people can be ? What's to stop someone from "Just trying it for the fun of it ?" And then claim innocence ? Or just say "Hey, everyone was doing it ! Our club supports this !".

> As a parent who has grown up kids, my experience says that the more you try
> being "Moral Police", the more the youngsters try to do "masti". Instead of
> yelling and screaming, try talking it out. It always works. If it doesnt,
> then grin and bear it!!!

Yup. I concur. But aren't we talking about laws of the land here ?

I bet no parent would grin and bear it when their child announces his intent to commit crime with impunity !

> Bottom line, if you want to scream at someone, do it, but dont question
> other people's responses. All are not alike!!!

I agree with your point about all not being alike.

But aren't grown ups supposed to be self disciplining ? And if they aren't, I think it's the duty of others around to speak up.

And in my experience with other user groups (on a whole variety of topics), such discussions and voicing of opinions
1. help build up awareness of various issues
2. are a sign of a vibrant community
3. help establish a code of conduct

After all standards and conventions must withstand questioning, and must be tested once in a while.

> I am just back from an International YL Meet in Korea where I had a great
> time with 100 other YLs!!

Great. Please write in more about your experiences. I've joined this list
recently, and would love to learn more about Mumbai HAMs' experiences.

2019. Tickets ,Sukhois, Welcome and Thanks

Yahoo group: m_a_r_s
Date: 2004-10-18 15:10:31 UTC
From: Shantanu Chand
Topic: 2013 Message: 2019

Dear Sarla and all other HAMs,

Thanks all around to all those ,who have showered us new hams with all your good wishes.Its great to be here. Look forward to QSOing with you all some day.

As for the Sukhois I completely agree with you Sarla. Everyone knows their responsibilities and thats why they are here in the first place with tickets in hand etc. We have all gone through the procedure and know the consequences.

By the way I suggest to all HAMs with internet access to do a search on google or yahoo for " aircraft frequencies" or "aeronautical frequencies" and check out the results for yourself. Its all there for the taking in any case.

Well, anyways all the very best to all my fellow HAMs who too have got their tickets along with me. GET ON AIR NOW. There is no excuse for you to stay off. You have waited over a year for this and now the time has come to put all that hardwork into practice.

Last but definitely not the least. Thanks to all the senior hams who taught us and went through all the effort to make a full fledged HAMS. The list is too long and i am afraid i might forget someone so I am not going to put the list here.

Three cheers for MARS hip hip (i want to hear the rest on air)

From: Ankur Puranik
Topic: 2020 Message: 2020

Dear friends,

I don't understand why do people put up mails without having sufficient knowledge on the topic.

Firstly to start with the FREQ IS NOT AN Indian Air Force OR DEFENCE frequency. It is a general AIR TRAFFIC SPARE FREQUENCY.

Secondly the information about the frequencies IS FREELY AVAILABLE ON THE INTERNET from Department of telecommunications . (DoT's) website , and also on many other sites related to the mumbai airport.

Many of our HAM RADIO sites also CLEARLY STATE THE AIR BAND FREQUENCIES, So it is public information, and nothing confidential about it.

Thirdly the PTT DOES NOT OPERATE ON SUCH FREQUENCIES (yah people will be ready to put the next mail..... "so ankur tried pressing the ppt" ...wait ..!) .....THE RADIO MANUAL SPECIFIES WHAT YOU CAN RECEIVE AND WHERE YOU CAN TRANSMIT.

And if you people still have a problem pls approach ICOM & YAESU asking them to block the non ham bands on the rig.

HAM RADIO is such a wonderful hobby , enjoy it.

And please use the e-groups for constructive or educational purposes rather than . . .

grow up guys!

You've upt up a solid bit of valid points.

I decided to write direct to you, since I believe my mails are starting to sound like QRM to folks :-)

Anyways, my responses below:

--- Ankur Puranik <ankurpuranik@...> wrote:

> Dear friends,
>
>
> I don't understand why do people put up mails without having sufficient
> knowledge on the topic.

Yup, I'm a newbie, and have never held a radio in my hand.
Neither do I remember much Morse, nor do I recall the frequencies.
> Firstly to start with the FREQ IS NOT AN Indian Air Force OR DEFENCE
> frequency. It is a general AIR TRAFFIC SPARE FREQUENCY.
Sure.

> Secondly the information about the frequencies IS FREELY AVAILABLE ON THE
> INTERNET from Department of telecommunications . (DoT's) website , and also

Ack, again.

> Many of our HAM RADIO sites also CLEARLY STATE THE AIR BAND FREQUENCIES, So

Hmm, ok.

> And if you people still have a problem pls approach ICOM & YAESU asking
> them to block the non ham bands on the rig.
Yes, this is sufficient deterrent for electronically-challenged folks like

myself.

>
> HAM RADIO is such a wonderful hobby , enjoy it.
Indeed
>
> And please use the e-groups for constructive or educational purposes rather
> than . . .
Hmm, I concur.
>
> grow up guys!
:-)

All well in their place, Ankur.

There's always this debate about how much should one share with rookies. Those intelligent and knowledgable enough to go seek such information are likely to use such knowledge sensibly.

However, those who're not smart enough to go dig out such information, don't deserve to get it easily on a platter. Yup, we've got google, and lots of underground sites out there. But the best one could do would be to help ensure that lusers don't get info on their hands easily. Again, this has long been a debate among techies, the world over - I do not intend to make this another flame fest!

As I've said before, I quite looked forward to working with you in the past. And I'd definitely look forward to doing so in the future as well.

Just my 2 paise..

2025. HAM software on Linux (slightly long mail)

Yahoo group: m_a_r_s
Date: 2004-10-19 08:04:34 UTC
From: Sriram N
Topic: 2025 Message: 2025

Hi all:

For those who use Linux, or are considering trying it out, Suse Linux 9.1 has a lot of apps bundled.

Here's a list of apps that Suse Personal bundles:
http://www.suse.com/us/private/products/suse_linux/pers/packages_personal/index_group.html
Suse Personal contains just

kradio 0.2.7a (A Video4Linux Front-End for Radio on BTTV Cards)

However, here's a list of apps that Suse Professional bundles:
http://www.suse.com/us/private/products/suse_linux/prof/packages_professional/index_group.html

Productivity/Hamradio/Fax

* acfax 981011 (Amateur Radio FAX Receiving Software for Linux / X11)
* HamFax 0.6.2 (HamFax is a Qt/X11 app for transmitting and receiving facsimiles on ham radio.)

Productivity/Hamradio/Logging

* conlogv 1.1 (Contest Log Program for VHF/UHF/SHF-Contests)
* contest 0.21 (Simple logging program, e.g. for vhf/uhf/shf contests)
* hamlog 0.9.1 (Amateur Radio Logging program for X using GTK)

Productivity/Hamradio/Morse

* unixcw 1.1a (Morse Code Tutor)

Productivity/Hamradio/Other

* aprsd 2.1.5b9 (APRS Internet server program)
* baken 0.5 (Display of VHF/UHF and microwave beacons on a map of Europe)
* hamsoft 0.2 (Reader for New Ham Radio Linux Software at radio.linux.org.au)
* ibp 0.20 (Monitoring the International Beacon Project)
* kamplus 1.1.2b (Host mode terminal program for the Kam Plus TNC)
* multimon 971208 (Linux Radio Transmission Decoder)
* qgrid 2.1 (Converts between Maidenhead grid squares and latitude/longitude)
* qsstv 5.2d (A SSTV program for Linux/X11)
* qtpcr 1.1.3 (Linux software that controls PCR-1000)
* tkconv 3.0.1 (Converse client)
* xqrz 1.0 (A Linux CLI/GUI interface to the QRZ! (tm) callsign database)

Productivity/Hamradio/Packet

* 7plus 2.25 (File Converter for Store and Forward)
* ax25-apps 0.0.6 (Applications for kernel AX.25)
* ax25-doc 1.0 (AX.25 Documentation)
* ax25-tools 0.0.8 (AX.25 tools)
* ax25spyd 0.23 (This daemon listens for AX.25-packets from the kernel)
* axssh 0.4 (Secure login with linemode and ssh)
* axw3 0.2 (HTTP proxy and IP/AX25 gateway)
* digi_ned 0.3.2 (Intelligent APRS Digipeater)
* dpbox 6.00.00 (Amateur Packet Radio Mailbox)
* fbbsrv 7.04h (F6FBB packet radio mailbox)
* fpac 3.25 (Applications dedicated to FPAC X25 node)
* linkt 0.8rc2 (Packet radio-terminal for the K Desktop Environment (KDE))
* mailgw 0.3.1 (Bidirectional mail gateway)
* node 0.3.0 (Simple node frontend)
* rspfd 1.0 (Routing Daemon for Use Over Amateur Radio Links)
* soundmodem 0.6 (Multi-Platform Sound Card Packet Radio Modem)
* tfkiss 1.2.4 (Software TNC Emulator)
* tnn 1.77.nk07 (TheNetNode Portable Network Software)
* tnt 1.9.1 (Terminal program for packet radio)
* wampes 991216 (A NET/NOS port to various flavors of Unix)
* xastir 0.3.6_3 (Amateur Station Tracking and Information Reporting)
* xconvers 0.4.2 (Convers client for amateur radio)

Getting Suse Linux:
You can get the Suse 9.1 personal Linux ISO from the links listed here:
http://www.suse.com/us/private/download/ftp/personal_iso_int.html

Suse 9.1 has also been distributed with several Linux For You issues in the
recent past.

Do you really need Suse Linux ?

You can always run the same apps on other Linux distributions as well. This
month, Linux For You has distributed Knoppix 3.6. This is a bootable CD-ROM,
something that you need not really install to your hard disk.

Only, if you boot your computer off a CD-ROM based Linux, you'll have to
reinstall apps that you might download off the Net.

Once you have Suse Linux, or some other linux, you can download and install those HAM related apps that might interest you. You can get these HAM radio apps off web-sites such as freshrpms.net, rpmfind, and the debian mirrors.

2026. Handy's on Aircraft

Yahoo group: m_a_r_s
Date: 2004-10-19 10:14:35 UTC
From: Shantanu Chand
Topic: 2026 Message: 2026

Dear All,

Could anyone please tell me if one can carry a handy on board an aircraft in the power off mode? Also how does one get through security check with it? Do the authorities know what HAM radio is at the airport? Does anyone have any experience they would like to share?

Hi,

If you are talking about importing them - then u can just put it into ur hand baggage or checked in baggage and carry without any problem. Obviously the equipment would be in power off mode.

If u are talking about carrying them open with a possibility of operating the equipment in aircraft or even at airports - then pls dont do that. U might be in trouble.

As far as mumbai customs goes - they wont make an issue if u carry one handy with battery, antenna and main body spreaded over in a suitcase. But ensure that u carry ur HAM licence along.

Thanks,

Mehul

Dear Mehul,
Thanks for the insight. I was only talking in terms of domestic travel so as to be in a position to get on air as soon as one steps out of the airport. I would obviously not even consider operating at the airport or in the air.

Just was wondering whether the CISF chaps at local airports know what an Amateur Radio License is or are we supposed to waste time explaining to the Commandante on duty the whole rigmarole of HAM radio.

Anyways, I guess you have more or less answered my question and thanks for the advise about not operating at the airport, i know my responsibilities but would work as a nice piece of advice for the others who are not aware.

Thanks once again Mehul.
Look forward to QSOing with you some day.

Dearest Ankur and all other concerned MARS Ham

I feel the issue is unnecessary blown out of proportion & we are stretching it too far ,I share the same views as Ankur, When we had to restratint the swl's on the air, we did that by informing them personally,we founders members do understand the sense and responsibilty, but do understand the people pointing fingers to any individual are pointing the other four towards themselves, I hope the my signals are quite clear 5/9 +20 if you do not copy then you have a bad rig(brains)....

I do not wish to hurt ankur or any one else nor want to justify anyone , if you think that someone is wrong you have to personally request , this group is not a forum to discuss or criticise , it is to discussed purely HAM & Society related issues, no moral policing... if a member thinks so ... sorry your are in a wrong world

WE in MARS are not an individual member but a extended family we(founder member) do have difference of opinion but never have discussed here, but are sorted out other ways not on a group. c'mon we are here to enjoy, and I understand that members who are Valid call sign holder, or waiting for their tickets do understand their responsibilty towards the MARS family & Society.

I REQUEST YOU ONE AND ALL PLEASE CLEAR THE (GROUP)FREQUENCY FROM THIS (ISSUE)TRAFFIC AND HAVE MORE RAGCHEWING ABOUT THE RADIO..

I HOPE THIS PUT THE ISSUE TO END .....and with a slogan

From: Shantanu Chand
Topic: 2031 Message: 2031

Dear Friends,
Since the last two days VU2AXN, VU2IZO and VU2SCQ have been standing by on the repeater frequency throughout the day. We have had short QSOs with Hams like VU2WLL,VU2PJM,VU2VVP, VU2DIB and of course VU3MWH.

I request all hams to please come on air anytime during the day, as we shall be standing by for a short QSO. We shall now give a call every 2 hrs starting 0800hrs IST and hopefully someone would give us a reply. Lets maintain the October heat on our 2m band as well.

QSO times:
0800hrs, 1000hrs, 1200hrs, 1400hrs, 1600 hrs,1800 hrs and 2000hrs

Anytime in between would also do.

Hi!

How often we mention with great pride that HAMs have often picked up distress signal and have been present to help out at time of crisis. Now this could happened only if the hams had been listening to related freqs other than ham bands.

I disticntly remember an instance when one of Lucknow ops VU2SWS sanjay picked up a distress signal from a W land ship near Sri Lanka. It was indeed a tough job to contact Chennai coast guard and co ordinate stuff. Thankfully the efforts were highly acknowledged by DX govts

Why I say god forbid had AXN picked up one such signal and under such circumstances only a single life could have been saved!!!!!!

Illegal no way I find,.

73

2038. Egroup Guidelines

Yahoo group: m_a_r_s
Date: 2004-10-21 09:23:20 UTC
From: VU2UGO
Topic: 2038 Message: 2038

MARS e-Group is an information resource area and discussion forum for all members of the Society. Following are some basic rules to ensure MARS e-Group can function positively and successfully, and be of assistance to all its members.

1. MARS e-Group is for use by its authorised members only.

2. Within MARS e-Group, information may be shared that is confidential to this group. It is your responsibility to ensure that this confidentiality is maintained by protecting your password and not divulging it to any other person to prevent non-member access to MARS e-Group through the use of your user name and password; and not disclosing by any means information shared in confidence within MARS e-Group to anyone who is not a member of this e-Group.

3. The value of MARS e-Group is the richness of its members? knowledge and experience, however, please take note that when you share information here, you must avoid statements that may be interpreted as unfairly intolerant of other people and their views. You are free to disagree with other points of view, but any communication conveying this should be done in a mature, non-offensive and non-aggressive way. Respect other user's opinions.

4. In the same way, you should NOT use MARS e-Group to post off-topic, irrelevant messages or bulk mailings including spam mail (promotional email), chain letters, pyramid schemes, solicitations and/or other advertising that has nothing to do with the focus of the e-group.

5. MARS e-Group enables the sharing of information and resources between members to meet, interact, and share ideas related ham radio with each other. It is not an area for the sharing of personal or private matters whether yours or someone else?s. Using an e-Group to spread personal information or gossip about anyone else, whether a member of this group or not, will not be tolerated.

6. Do NOT post any materials of any kind which contain a virus or other component that could be harmful to other users' computers or would allow others to inappropriately access software or web sites.

7. You are responsible and liable for all your activities while participating in MARS e-Group. You are responsible for all you write or post.

8. If there are messages and/or information resources posted to MARS e-Group that you consider to be in breach of these Guidelines, please contact e-Group's moderator(s) i.e. VU2NLF or VU2UGO.

9. All members must abide by these e-Group guidelines, and by the e-Group Code of Conduct at all times.

10. The moderator(s) of an e-Group reserve the right to take action against any person who breaches these guidelines.

2040. Alternatives to EchoLink !

Yahoo group: m_a_r_s
Date: 2004-10-21 10:27:58 UTC
From: Sriram N
Topic: 2040 Message: 2040

All:

While we have EchoLink for VoIP, EchoLink's source code is not available. While this does not really affect most HAMS, it can cause problems to those who use Linux, or who whish to add to EchoLink !

CQiNet might be of interest to such folks:

From their website: http://cqinet.sourceforge.net/
****
What is CQiNet?

CQiNet is a family of programs that combine Ham Radio with the Internet using Voice over IP (VoIP) technology. Two programs are currently in the family, "theBridge" and echoLinux.

Thebridge is a iLink/EchoLink compatable conference bridge that runs under various versions of Unix as well as Windows.

EchoLinux is a EchoLink client program for the Linux operating system.

****

CQiNet is marked as "Production/Stable". Meaning, it has been tested by users and programmers, and found to be working as desired for quite some time.

HI! Sarla ji

It is nice to see that I cant get away with any thing, in this case call it slip of fingures or tounge or my friend call sign are more familiar and come automaticaly.

The person metioned is VU2SIS Om Sanjay Sharma who was on a short stint here with UP electricity board and had good opportunity to work HAM bands as during his night shifts has his MQTH had an HF set for the local link. He also had a peculiar way of giving his call SHEEERA INDIA SHEEERA (Presently in Uttranchal). The incident is well documented in BSG publication and also with one of the ORGs down S. Many OTs might remember.

It would have been realy nice to have you among LKO HAMs never the less how abt paying a visit to the city of Nawabs we all would look forward to your company. It is festive season we are having Awadh Mahotsav ripe moment to enjoy the cusine, culture and company of friends.

2047. Police Report 2003

Yahoo group: m_a_r_s
Date: 2004-10-26 10:11:21 UTC
From: Huzefa Merchant VU2HIT
Topic: 2047 Message: 2047

Nilesh

Appreciating your effort to get the tickets of the last Batch , I would request you to adhered the "police enquiry report 2003" sent to you after the police enquiries, which states the level of interest and anxiety of the SWL waiting for the tickets.

SWL Blacklisted for their unco-operative attitude and low level interest as regards to the hobby , still getting the licences will be a unfortunate for the society as i had clearly stated in my "police enquiry report 2003", that IF LICENCES ARE PROVIDED TO THIS CATEGORY " THEY WILL BE A LIABILTY RATHER THAN AN ASSETS TO THE SOCIETY AND TO THE HAM COMMUNITY"

I will appreciate if the report is adhered and accepted in Toto, which will enable us to have better Hams for the society and the ham Community

I will leave the decision on you , to justify and analyze whether they really deserve the licences which we get after so much effort and pain.

Dear Friends

So we all are in Q now.

I have paid for 2 green birds @ 2000/- each long back
for vu2gbi & vu2hbn. Both their 5/8 with cable are
put up to their proposed shack awaiting green birds.
Hope to receive it soon.

Hi, everybody,
as everyone know green bird Qrm start after my mail for green bird.
as most of people had previously paid for greenbird (transformed exterior).i would like to have the name of people who have paid Rs 2000/- for green bird.because the set going to be sent to vu2wjm for repair.some of the sets are been repaired. but now set will be given after all of them are ready.otherwise it would create another Qrm on groups.
as Prain has sent mail about set . as per my talk with nilesh,parin has taken set from nilesh the set was working out side ham band,he just had to tune it to ham band ,but instead parin returned set in pieces with all it final burned out to nilesh.
untill previous previous green bird matter is solved no green bird issue now .
all them sent mail to my email ac vu3aua@...

From: Rahul Srivastava
Topic: 2084 Message: 2084

Dear Friends,

Hi!

There appears some confusion regarding the Green Birds status at Mumbai. I have been working on it so I feel it is better to put up the exact position.

Initialy 15 sets were procured from Agra by NLF and add on cards for their modification was sent by me from Lucknow. It was decided to distribute them all together.

This summer we modified 10 sets at Mumbai and 5 set needed more repairs due to condition and some had been experimented upon go a greater extent. These 5 sets are being sent to me for repairs as I have related setup here.

Seing the difficulty in having the set modified at Mumbai I will be also sending 10 more ready to operate sets from here. Thus in all we plan to have about 25 Green Birds on air before Hamfest.

I hope this would make the position clear.

Do you Yahoo!?
Check out the new Yahoo! Front Page. www.yahoo.com/a

2085. Registrations for Hamfest India 2004.

Yahoo group: m_a_r_s
Date: 2004-11-03 15:02:18 UTC
From: vu2nlf
Topic: 2085 Message: 2085

Dear Members,

The preparations for our hamfest India 2004 is in full wing, We have already opened the registrations for the fest. Our Hamfest website www.hamfest2004.org is up and fully functional.

The dates and the Venue of the fest are as follows:-

Dates : 24th / 25th / 26th December 2004. (Fri /Sat / Sun).

Venue : P.L.Deshpande Kala Academy. (Ravindra Natya Mandir) , Worli, Mumbai.

Registration Fee: For
HAM/XYL/SWL ☐ Rs.500/-
For Harmonics between age 5
to 12 ☐ Rs.250/-
For Senior Citizens (age
above 60 yrs) ☐ Rs.250/-
For Harmonics below age
5 ☐ Free
Mode of payment : Deposit Cheque in ICICI Bank / Demand Draft / Cash

The registration fees also includes food (Breakfast, Lunch, Afternoon Tea & Dinner).

We have trying to make Hamfest India 2004 as interesting and interactive as possible, we have added lots of new programs such as Quiz Competitions, Morse competitions, Fox Hunt, Treasure Hunt, Special movies, etc..etc.. we are sure that you will a wonderful time during this festival.

We also have kept lucky draws for early bird registrations (before 25th November 2004), we have 3 ICOM IC-2100 VHF Base Stations as lucky draw prizes.. All those registering before 25th November 2004 will also get a customized callsign cap of hamfest 2004.

We also have 200 Raffle Tickets of Rs.500/- each, You may opt for
as many tickets as you wish, the more tickets you buy more the
chances are of you winning the mega prize of ICOM ☐ IC-706-MK-II G,
All mode all band mobile transceiver.

If you are interested in a exhibition stall, you may contact us as soon as possible.

If we get good number of registrations of XYLs & Harmonics, we would arrange special programs for them in our mini theatre so that they

don't get bored..

All members are requested to kindly register for our hamfest as soon as possible, We suggest that you register before 25th November 2004 and take advantage of the lucky draw.

We also request you to get us as many advertisements as possible, this will help is financially, also if you know companies interested in sponsoring or co-sponsoring our hamfest then please get in touch with me immediately.

We would also appreciate if you get hold of companies interested in putting up stalls during our festival. The commercial stall charges are Rs.10,000/- (Rupees Ten thousand Only) for 3 days.

There are few tickets left in Raffle ticket draw which is exclusively for our society, hence you may still take advantage of it. We would be opening this draw very very soon now.

The coming Hamfest meeting is on Sunday 7th November 2004 at Gyan Sadhna College, Thane at 10:00 Am sharp . All members are requested to join us and register for the hamfest.

Looking forward to having a eyeball with you..

From: VU2JOS <at0j@...>

UK Amateurs Enjoying Extra Spectrum at 7MHz

UK radio amateurs gained access to new frequencies between 7.1 and 7.2MHz from 31 October, 2004. After dark, the band between 7.1 and 7.2MHz is still full of powerful broadcast stations, although some clear frequencies can be found. The band became available on the second day of the CQ World Wide DX Phone Contest. Many UK stations took advantage of the new band by making contest QSOs with stations in the USA on their own frequency, instead of having to work 'split' as had been the case when contacting North America on 40 metres SSB. During the daytime, numerous UK stations are now able to have virtually interference-free inter-G contacts above 7.1MHz. The new band is available to radio amateurs on a Secondary (non-interference) basis until 2009. After the end of March 2009, the broadcast stations should move to other frequencies and 7.1 to 7.2MHz will then become an amateur Primary band.

Amateurs in the Republic of Ireland were also granted access to 7.1 to 7.2MHz towards the end of October, joining those in Croatia, Norway and San Marino who already had access to these frequencies. Radio amateurs in Switzerland will also gain access to 7.1 to 7.2MHz from 1 January 2005.

-
DEPOSIT CHEQUE INTO NEAREST ICICI BRANCH / ATM
AND SEND THE REGISTRATION INFO
BY ONLINE FORM / E-MAIL / FAX / COURIER
-

Hi Everybody!!

The fast & easy way to register for Hamfest India 2004 is to
DEPOSIT CROSSED CHEQUE (NO CASH DEPOSIT PLEASE) of appropriate amount
(i.e. REGISTRATION FEE and 'RAFFLE TICKET MONEY + Special Event Entrance Fee
+ Accommodation Cost, if required') into your nearest ICICI Bank Branch/ATM
in the name of :

Saving Account Name - 'HAMFEST INDIA 2004'
Account Number - '003201031174'

AND USE ANY ONE OF THE FOLLOWING METHOD TO INFORM US:

ONLINE FORM at
http://www.hamfest2004.org/regform.htm
OR
E-MAIL your name with your contact number at
vu2ugo@...
OR
FAX your registration form to
- 28683910 (between 8am to 8pm)
OR
COURIER your registration form to :
Hamfest India 2004,
c/o Mumbai Amateur Radio Society,
Avijha Building, Room No.14, 1st Floor,
Jambulwadi, Next to Kyani Bakery, Mumbai 400002

To find out the nearest ICICI Branch / ATM visit
https://infinity.icicibank.co.in/web/services/jsp/Locateus.jsp

Additional info about HFI'04 registration is available at
http://www.hamfest2004.org/reg.htm

Please remember to mention your cheque number and ATM/Branch Name where you
deposited your cheque with your registration info. Your registration &
receipt details will be confirmed by me on the LL or e-mail.

Please register before 25th November 2004 to receive 1 lucky draw ticket
with every registration. Three Lucky Draw winners will get IC2100 VHF base
station each. For further details visit

http://www.hamfest2004.org/lucky.htm.

200 tickets of Rs.500/- each are also available. One Lucky Winner will get IC706MKIIG - HF/VHF/UHF Multi-mode rig. For further details visit - http://www.hamfest2004.org/raffle.htm

For further queries send an e-mail to vu2ugo@...

Yahoo group: m_a_r_s
Date: 2004-11-08 23:04:11 UTC
From: Prashant Koli
Topic: 2099 Message: 2100

Hi All,

Congratulations to all the winners!

I am one of the winners- you would say lucky- but in reality unlucky as those (seemingly) three lucky tickets were denied a chance to participate in a Grand/Bumper/Big prize by way of cancellation!

How is that?

Well, I will try to explain....

There are two procedures :

1.'ascending value order system'- in this system tickets are randomly drawn for a lower value item/prize first. However,tickets are returned to the draw to be eligible for other grand prizes...the logic is that the ticket is being purchased with the Grand prize in mind...the common example is Housie game

2.'descending/reverse value order system'- the most widely follwed system-in this system the grand prize shall be selected first, followed by prizes in descending retail value However,tickets may be or may not be returned to the draw ...as the one who has already got a better prize would not mind if he is excluded from the further draw...the common example is Lotto or Lottery.

I would like to know the draw procedure that was followed at the draw.

I did not attend the meeting when this draw took place. But from what I understand the organiser of raffle had 'ascending retail value order system'procedure' in mind but created blunder by not replacing or returning the tickets in the 'draw drum'.This has effectively barred those who got smaller prizes in participating for the Grand prize.Unlucky were those whose fate was sealed by offering them small baits earlier.

I wasn't there at the draw, but I failed to understand why nobody present there could follow the wrong logic being pursued at the draw.

Agreed that in the first place my (for that matter all of us) decided to purchase raffle tickets with a simple aim of supporting our society and not by looking at the prize.However, when you learn that your ticket was not given an opportunity to participate in a full draw it's a crude shock.Were my tickets 'children of a lesser god?' or simply they were not worth getting any bigger prize?

(One more piece of info for those who are into organising Raffle :

The lowest prize at the raffle should be more than a ticket price!
Whatever may be the reason for buying the ticket,surely one is not
buying to get a prize worth less than his single raffle ticket.)

Hello All,
There is no short of communication channels these
days. You speak of VOIP based Repeater links, or
Digital Stars, WiFi or yet to come bla bla bla, Hams
have excelled the way of communication.
While there will be always arguments on these, people
enjoy talking and knowledge building.
I know at Mumbai we(some of hams like me) had tried
eQSO, which i had not much interested in earlier. But
now this Cute little utility has cheered me here in
Wland.
Other day i had an opportunity to speak to a ham from
Honduras, which would have been very difficult with
RF. Ofcourse there is no channel which beats the
excitement of being on AIR with your rig. But
something more is always better to know.
Here is something to try: Group in UK (2E1EHM) is
devicing something similar using Internet.
Interested hams can visit their Site
http://www.sidesaddleasp.info/
I am not exactly sure how it works. but David (2E1EHM)
told me that its similar to SSTV.

Have Fun

Hi there Kiran!

Nice to know that u r active on eQSO.

I have had same feelings about eqso (VoIP) programs.

When I got ticket with VU3PDZ callsign and did not have access to HF I was using various such IRLP programs like Iphone,I Link and even remote HF operation from W7DXX site.That was in the year 2000.All this stopped when I got my HF rig.And yes I had the same feeling ....nothing beats actual, hardcore HF operation over air.

However, recently, few of my old friends from VE and W land sent me mail and invited to EchoLink.So after a long gap I was back on EchoLink....and this time I thoroughly enjoyed EchoLink.Now with such VoIP programs u can talk to hams whenever u like and now u can enjoy this hobby whenever u have sparetime.

Regarding SSTV program....I am on similar program,ISSTV (http://www.isstv.co.uk/), since last few months.I am not able to comprehend the program or I have not given much try.

Anyway, it is a nice idea to try these different modes of communication when u do not have ur own HF setup or when HF conditions are not that favourable or simply when u want to have a nice,small & quick shot straight from ur computer/internet.

Members can also have a look at 'UI-View 32', an APRS program,available at http://www.ui-view.com/ or can visit http://ja1ogs.com , home page of JA1OGS,Art, who is ever willing to help you in installation.

All hams who have got tickets recently can consider all these options.

Fave fun and frolic...

From: nilesh rathod
Topic: 2124 Message: 2124

Dear Members,

The preparations for our Hamfest India 2004 is in full swing, You may have visited our website www.hamfest2004.org and would have found it informative.

The Hamfest Team members are working very hard to make this event not only sucessful but also a memorable one.

I am sure that you will not miss this wonderful festival no matter what... it is happening in mumbai after 10 years. we don't know the next will be after god knows how many years.

Even if you cannot give time for the Hamfest work, least what is expected out of you as a MARS member is to register for hamfest and support us in making this wonderful festival happen.

with much regret I have to say, inspite of repeated reminders by UGO and other, we have not received many registeration from our members.
Your early registerations will boost the morale of all the Hamfest Team members.

Anyways you will be coming for the hamfest, we know that, do why delay, register before 25th Nov 2004 and take advantage of the free raffle ticket. don't miss this golden opportunity... register now...and join us...

Brief report of JOTA'2004 Activity by MARS

==========

Mumbai Amateur Radio Society in association with Maharashtra State Bharat Scouts and Guides participated in 47th Jamboree On the Air event on 16th - 17th October, 2004.

The participants at 5 JOTA locations were VU2HIT, VU2UBP, VU2AXN, VU2SCQ, VU2OZO, VU2JPN, VU3KNY, VU3MWH, VU2GBI, VU2CBU, VU2IZO, VU2SFN, VU2IES, VU3AUA, VU2UGJ, VU2IVO, VU2HVK, VU2SFH, VU2UGO, VU3DGB and SWLs - Vishal Shah, Nilesh Dixit & Andrew.

Total 1900 scouts and guides from 42 schools took part in this event. They all received participation certificate from Maharashtra State Bharat Scouts and Guides.

The stations were QRV on HF & VHF. Total 6 VU & 4 DX JOTA stations were contacted on HF. This year for the first time VU2CBU OM-Prashant with VU2SFN OM-Shailesh operated JOTA Station on Echolink and they logged 8 DX JOTA contacts.

Local Press coverage for the general awareness of Ham Radio & JOTA was made at Thane Location.

Hi UGO:

Congratulations on the successful JOTA. I'd planned to come, but was away at a customer site..

But it's nice to see that things went farely well..I bet the DX contacts would've left the scouts and guides thrilled. Maybe we might have inspired some of them to become HAMS themselves :)

Hi,

Friends, please note that for HFI'04, we are inviting 'HAMs/SWLs and their XYL/Harmonics only'.

AT PRESENT we are not accepting any registrations from non-HAM / non-SWL. If anyone is interested in ham radio and hamfest as well, the only way is, register for the HFI-04 as well as become MARS member.

Also note that registration fee for any 1 OR 2 days of the hamfest is fixed i.e. Rs.500/- for Individual (Rs.250/- for senior citizen & harmonics between age 5 to 12yrs)

Thanks Feroze for the update, gr8, keep up the good work!

Dear Sandeep,
Brief update on registration.
Mr Uday Roy is registering on site and paying thru ICICI. If unable he will get in touch with me
Mr Shabir Lokhandwala will register with Huzeefa as his shop is next to HIT's shop. informed HIT.
Mr Rajesh Sethia has received his registration form and will be depositing with ICICI
Mr. Jiggar Mehta is in Goa for a training. I have requested him to come over for the weekend in Dec. He is considering.
Mr Charles Barbosa is unsure as it is Christmas time.
A boy is studying in VJTI wants to attend the HAMFEST and may get hooked on to HAM radio. Can I take his registration? If we insist on MARS membership he may opt out as he will only attend on Saturday &/or Sunday.
I will contact Issac, Jesal Shyam Kapadia and a few more today

2129. 9th plan of AIR

Yahoo group: m_a_r_s
Date: 2004-11-24 10:15:18 UTC
From: Deepak-VU2CDP
Topic: 2129 Message: 2129

Broadcasting is the most powerful medium of mass communication. The importance of All India Radio as a medium to inform, educate and entertain the masses needs no emphasis in a developing country like India. As a public service broadcaster AIR continues to contribute to the national building process and socio-economic and cultural development of the nation. The thrust areas of Ninth Plan of AIR are:
Expansion of Border Area Coverage:

(i) North-Eastern region:

For strengthening radio coverage in the north-east, replacement of Guwahati-50 KW MW Transmitter by 100 KW MW Transmitter, Silchar 10 KW MW Transmitter by 20 KW MW Transmitter, Imphal-50 KW MW Transmitter by 300 KW MW Transmitter and Kohima-50 KW MW Transmitter by 100 KW MW Transmitter are under implementation. New FM channels with stereo-playback facilities are also being provided at Shillong, Imphal, Agartala, Aizwal, and Itanagar. New Radio stations are being set up at Dhubri, Tezpur, Churachandpur, Dharmanagar and Longtherai.

AIR Kokrajhar in the Bodo Autonomous Council Area (BAC) has already been commissioned and another station at Dhubri in the same area is being commissioned shortly.

A special scheme to set up Community Radio Stations at 10 places is also under implementation. To cater to the small groups of people with different languages and dialects to realise and nurture their cultural and artistic expressions by listening to programmes in their own dialects.

(ii) Jammu & Kashmir:

For the purpose of expansion of coverage, upgradation of 1 KW SW Transmitter at Jammu by 50 KW SW Transmitter, Leh-10 KW MW Transmitter by 20 KW MW Transmitter and replacement of Srinagar-1 KW MW Transmitter by 10 KW FM Transmitter are under implementation. Besides, one 6 KW FM Transmitter at Jammu is also under implementation. In addition, provision of stereo playback facilities in Srinagar studio are also under implementation.

An integrated plan for enhancing the coverage in Jammu & Kashmir area has also been recently approved, which shall be implemented in a set time-frame.

Upgradation of programme production facilities:

Steps have been taken for the improvement of technical quality of programmes. State-of-the art digital equipment is being provided in the studios. Digital based technology which are in use the world over is also being inducted in All India Radio to ensure superior recording and editing facilities.

(i) Compact disc players have already been provided in all the major stations;

(ii) Computerised hard disc based recording, editing and playback system for broadcast are in use in many broadcast organisations through out the world. All India Radio has also planned to introduce such system in the network. To start with major stations have been

provided with these facilities.

Audio Refurbishing and Archives:

AIR has established a sophisticated audio refurbishing centre in New Delhi under a UNDP scheme. Old and degraded archival audio materials are being refurbished regularly for digital storage ensuring longtime preservation. A permanent archival centre at Todapur in New Delhi is also planned to be implemented soon.

Extension of FM stereo channel:

The FM stereo service which is presently functional at Delhi, Mumbai, Chennai, Panaji and Cuttack has become very popular and is generating a good revenue for the network. This service is being extended to all the state capitals and important cities.

Expansion of entertainment channel:

As a part of introducing stereo service at state capitals, it is proposed to convert Vividh Bharati Service from Mono to Stereo. The studios at Mumbai, which are originating VB service, were converted to stereo format last year. Digital stereo uplink facility has also been provided.

Expansion and strengthening of External Services:

All India Radio has emerged as a major international broadcaster transmitting in 16 foreign and 9 Indian languagues for a total duration of about 70 hours per day. AIR External services cover about 80 countries of the world except two American Continents. These external services are radiated with the help of 15 number of high power short wave transmitters. The following measures have been undertaken to strengthen these services:

(i) Establishment of five additional high power short wave transmitters of 250 KW each at Delhi (Khampur) and replacement of two existing high power shortwave transmitters of 250 KW each at Aligarh.

(ii) Broadcasting of external services programmes on Internet.

Replacement of old transmitters with new transmitters:

Schemes have been undertaken to replace old transmitters with high power transmitters as per ITU assignments to overcome shrinkage and strengthen the primary grade service. High power transmitters are being provided at Jodhpur-300 KW MW Transmitter in place of 100 KW, Nagpur-300 KW MW transmitter in place of 100 KW, Imphal-300 KW MW transmitter in place of 50 KW, Nazibabad-200 KW MW transmitter in place of 100 KW, Indore-200 KW MW transmitter in place of 100 KW, Kohima-100 KW MW transmitter in place of 50 KW and Port Blair-100 KW MW transmitter in place of 20 KW.

Besides the above, a 1000 KW MW Transmitter at Rajkot and several 20 KW MW transmitters are included under the replacement scheme. 1 KW MW transmitters at a number of places are being replaced mostly with 10 KW FM transmitters. With there replacement, Vividh Bharati Service at quite a few places will get shifted from medium wave to FM.

New Broadcasting House:

There has been a long felt need for providing studio facilities for the broadcast of various services from Delhi. Therefore, a scheme to set up a New Broadcasting House at New

Delhi, at an estimated cost of Rs.60 crores was approved by the Government in February 96.

The new complex will house studios equipped with latest state-of-the-art technical facilities for the External Services Division, News Services Division and Home Services.

Research & Development:

The Research Department of All India Radio is engaged in the development of systems which are not available in the open market, formulating plans for introduction of new services and technologies in the network. Some of the activities are highlighted below:

(i) AIR News-on-Phone: All India Radio has started an interactive broadcasting service for providing AIR News-on-Phone. Through this service, listeners can access a capsule of the latest news highlights.

(ii) Radio on demand: It is an interactive radio service developed and recently started by AIR in Delhi. Here the listeners telephone the broadcasting house and dials the pre-published music code number to register the demand for a particular music. The music stored in the computer server gets retrieved and automatically linked to the FM transmitter for broadcasting.

(iii) Digital Audio Broadcasting (DAB): AIR joined the select group of braodcasters on 1st April 1998 by introducing two hour daily transmission of Digital Audio alongwith one FM Channel on experimental basis.

Staff Training Institute :

The Staff Training Institute located at Kingsway, Delhi caters to the training needs of staff of All India Radio & Doordarshan. Strengthening of Staff Training Institute is proposed under the plan.

Another Staff Training Institute has been set up at Bhubaneshwar (Orissa).

Radio Networking through INSAT:

All the broadcasting centres of AIR throughout the country have been networked through satellite for the relay of national and regional programmes. 18 Uplinks are available for uplinking the programmes in different state capitals to be used by the regional and local stations of respective states. Aizwal, Kohima, Imphal and Agartala are being provided uplinking facilities during the current plan. Uplinking facilities at Jammu are also proposed.

Untitled DocumentMumbai Amateur Radio Society

Dear Friends,

The preparations for our Hamfest India 2004 is going on war footing... Hamfest Team is working round the clock to make this event the best ever hamfest in India.

This event is NOT something that you can afford to miss out... it is not ganesh visarjan, JOTA, or Foxhunt.. that you can always participate next time... The next hamfest in Mumbai come after 10 years you never know.. it is happening in Mumbai after 10 years that is a fact....

The registeration fees for 3 days is measly Rs.500/-.. The food which we are giving you itself is going to cost us Rs.750/- per head for 3 days... and ofcourse sovernior and gifts.... so Rs.500/- is like almost free....

By now all of you must have got the hamfest invitiation by courier... if not please download it from ou website www.hamfest2004.org

The last date for Lucky Draw Coupon is extended to 10th December 2004.. so take advantage of and join us now without further delay..

Hams from all over India and Abroad are coming for the fest.... It would be totally Illogical you very much here in Mumbai and not attend...

Register for the fest now and support our society.. it is WIN WIN situation, you have nothing to loose only gain gain & gain...

Sandip - VU2UGO has already posted mails how to register with convenience.... never the less if you have any queries you may directly reach him... vu2ugo@...

Please pass this message to all our other Ham friends who are not on internet... You must register not only yourself but all get the registerations from your fellow hams and help us in making this Mega Event Successful..

Date: 2004-11-27 04:50:21 UTC
From: Deepak-VU2CDP
Topic: 2134 Message: 2135

Well pal I am facing the same problem since most people ask why I need 15A!!!!! Haven't been able to procure one but in touch with a few people who may help by putting extra windings on the X'fmer. I honestly do not know how good their supplies are but a better and safe option is Aplab. I plan to buy one from them since I've gotten used to Aplab Power Supplies right from college days . Do keep in touch on this as i may land down at Lamington Rd. someday to scout for some more dealers.

73s
VU2CDP

PS: If you intend to make one on your own then I can give you a good design but procuring the X'fmer still remains a bottleneck

VU2LOC <vu2loc@...> wrote:

Hello Friends,

Please guide me for

• Power supply requirement : 13.8 V DC ±15% with at least 15 A
capacity & 20A Fuses.

Can anybody suggest a genuine Power Supply Dealer?

Regards,

Shailesh Deshmukh.

I have posted (attached) these telephone numbers list many a times... but most of members when asked to call up members always come up with excuses that they do not have the details.
Hence once again I am sending these files to you guys...PLEASE save them and take a hard copy too...
73
NLF

Dear NLF,

Yahoo has stopped storing attachments of all kinds if they are attached to a message to a yahoogroup. You need to upload the file in the files section. Though there is a file that you have uploaded, I think it may need updating - you can delete the same and upload a fresh one. As regards your email above, you can wager that most members on this group did not / will not get the telephone numbers.

Just trying to help.

History of 73 From the 1969 ARRL "The Radio Amateur's Operating Manual"

The traditional expression "73" goes right back to the beginning of the landline telegraph days. It is found in some of the earliest editions of the numerical codes, each with a different definition, but each with the same idea in mind - it indicated that the end, or signature, was coming up. But there are no data to prove that any of these were used.

The first authentic use of 73 is in the publication 'The National Telegraph Review and Operators' Guide,' first published in April 1857. At that time, 73 meant "My love to you!" Succeeding issues of this publication continued to use this definition of the term. Curiously enough, some of the other numerals then used have the same definition now that they had then, but within a short time, the use of 73 began to change.

In the National Telegraph Convention, the numeral was changed from the Valentine-type sentiment to a vague sign of fraternalism. Here, 73 was a greeting, a friendly "word" between operators and it was so used on all wires.

In 1859, the Western Union Company set up the standard "92 Code." A list of numerals from one to 92 was compiled to indicate a series of prepared phrases for use by the operators on the wires. Here, in the 92 Code, 73 changes from a fraternal sign to a very flowery "accept my compliments," which was in keeping with the florid language of that era.

Over the years from 1859 to 1900, the many manuals of telegraphy show variations of this meaning. Dodge's 'The Telegraph Instructor' shows it merely as "compliments". The 'Twentieth Century Manual of Railway and Commercial Telegraphy' defines it two ways, one listing as "my compliments to you"; but in the glossary of abbreviations it is merely "compliments". Theodore A. Edison's 'Telegraphy Self-Taught' shows a return to "accept my compliments". By 1908, however, a later edition of the Dodge Manual gives us today's definition of "best regards" with a backward look at the older meaning in another part of the work where it also lists it as "compliments".

"Best regards" has remained ever since as the "put-it-down-in-black-and-white" meaning of 73 but it has acquired overtones of much warmer meaning. Today, amateurs use it more in the manner that James Reid had intended that it be used - a "friendly word between operators". 73,VU2AXNAnkur Puranik

Subject: Re: Need Help For Power Supply.

Well pal I am facing the same problem since most people ask why I need 15A!!!!! Haven't been able to procure one but in touch with a few people who may help by putting extra windings on the X'fmer. I honestly do not know how good their supplies are but a better and safe option is Aplab. I plan to buy one from them since I've gotten used to Aplab Power Supplies right from college days . Do keep in touch on this as i may land down at Lamington Rd. someday to scout for some more dealers.

73s
VU2CDP

PS: If you intend to make one on your own then I can give you a good design but procuring the X'fmer still remains a bottleneck

VU2LOC wrote:

Hello Friends,

Please guide me for

• Power supply requirement : 13.8 V DC ±15% with at least 15 A
capacity & 20A Fuses.

Can anybody suggest a genuine Power Supply Dealer?

Regards,

Shailesh Deshmukh.

2150. Increase your Yahoo mailbox capacity to 250 MB

Yahoo group: m_a_r_s
Date: 2004-12-08 05:10:13 UTC
From: Huzefa Merchant VU2HIT
Topic: 2150 Message: 2150

Lot of peoples are asking about Upgrading their Yahoo Mail Box.

And now i come up with another trick, let's try this. it will work surely.

If you are still using 100 MB mailbox in yahoo! Then follow the following
trick so that your mailbox size gets upgraded to 250MB.

1.Goto http://edit.yahoo.com/config/set_intl
2.It asks for the username & password
3.Enter the username and password, which is still 100MB
3.Change the language content there to UK English from US English
4.Click on Accept
5.Click on Check Email
6.Check your mailbox size

Topics in this digest:

1. Significant move...
From: "Sandeep Baruah"

Message: 1
Date: Mon, 06 Dec 2004 19:14:49 -0000
From: "Sandeep Baruah"
Subject: Significant move...

Dear friends,
In a significant move, the Ministry of Home Affairs of the Goverment of India, has convened a joint meeting of the different Ministries, Govt. Departments and different Amateur Radio (ham radio) promoting bodies in India on December 6, 2004. The meeting which was held at the behest of the National Disaster Management Wing of the Ministry of Home Affairs aimed at removing the bottlenecks of ham radio promotion in India and to bring up a 'National Roadmap' for its promotion.

Brainstorming sessions on the following aspects were held:

(1) Amateur Radio in Education (School/College/Technical Institutes);
(2) Amateur Radio for Volunteer Groups under youth development schemes;
(3) Amateur Radio Promotion and related Legal/Security/Regulatory aspects.

The ham radio operators in the India were represented by the Amateur Radio Society of India (ARSI), Vigyan Prasar (National Council for Science & Technology Communications & Vigyan Prasar Club VU2NCT, Govt. of India), National Institute of Amateur Radio (NIAR), Mumbai Amateur Radio Society (MARS), and Institute of Amateur Radio Gujarat (GIAR).

Hams who have represented on behalf of the above organisations were:
Lion Ajoy from Bangalore, VU2JHM (representing ARSI-an IARU

affiliated body) and Shri Sahruddin, VU2SDN (Ex-President, ARSI), Shri S. Suri, VU2MY (National Institute of Amateur Radio, Hyderabad), Shri Sandeep Baruah, VU2MUE (Ex-VU2MSY) & Dr. Subodh Mahanti from Vigyan Prasar, Deptt. of Science & Technology, Shri Nilesh Rathod, VU2NLF (Mumbai Amateur Radio Society, Mumbai), and Shri Jinofer Bhujwala (Institute of Amateur Radio Gujarat-GIAR).

ARSI's views were earlier faxed by Mrs. Sarla Sharma, VU2SWS (Vice-President, ARSI) to the Home Ministry.

Shri Rama Rao, Assistant Wireless Adviser to the Govt. of India, WPC Wing was also present in the meeting. It was informed by Shri Rama Rao that WPC is now considering an amendment of the Indian Wireless Telegraph (Amateur Service) Rules 1978 (which was last amended in 1984). For example, there may be just two categories of ham radio licences in India, i.e.'Restricted Grade' and a 'General Grade' licence.

The meeting was convened and presided over by Shri Saroj Kumar Jha, Director (NDM-III, Ministry of Home Affairs), who strongly felt that that the grievances of amateur radio enthusiasts in India are genuine and that these attract serious attention. He also expressed his feelings to do away with the age old rules & regulations pertaining to ham radio in India.

Most of the participants came to a common consensus that following are the bottlenecks of ham radio promotion in India:

(1) Long delay in the 'Licencing' (due to the long process involved in police verification etc.)

(2) Restrictions like the permissions involved in ham radio operation (for portable operation, mobile operation, field day operation, awareness programmes, expeditions, dxpedition, reciprocal operations, car rallies etc.)

(3) Customs duty imposed on amateur radio equipments (those that come under the HS Code 852520 04).

(4) Mandatory requirement of the knowledge of Morse Code etc.

In this regard, an elaborate report is submitted to the NDM (Home Ministry) by VU2NCT club station of Vigyan Prasar, which is available at http://www.qsl.net/vu2msy/VU2NCT_Suggestions_to_Home_Ministry.pdf . These are in line with the views which are separately submitted by ARSI to the NDM (Home Ministry).

We on behalf of VU2NCT club station would like to thank all the hams who have submitted their valuable suggestions through an online Internet form long time back (http://www.qsl.net/vu2msy/amendment.htm) .

Many of the views in our report to the Home Ministry are directly 'taken' or 're-produced' from the views which were deliberated by the individual hams in India through the online Internet form.

Thanks to OM Gopal Madhavan, VU2GMN, YL Sarla Sharma, VU2SWS (Vice President, ARSI), Shri Sahruddin, VU2SDN (Ex-President, ARSI) and Lion Ajoy, VU2JHM for catalyzing the effort.

Thanks to VU2UKR, VU3FUN, VU2ZZA, VU2LID, VU2ZAP, VU2UYC, VU2DUF, VU2KFR, VU2ATN, VU2PCD, VU2CBU (Ex-VU3PDZ), VU3DJQ, VU3SNM, VU2JPS, VU2NGB, VU3HCL, VU2LLA, VU2GRM, VU3RJH, VU2PAI, VU2SBJ, VU2HSM, VU2JN, VU3HCL, VU2SDU, VU2LLA, VU2PAI, VU2DRL, VU2LIB, VU2WEE VU2ARC/JHM, VU2YK, VU2RAK, VU2HFR, VU2SXA, VU2BTM, VU3VOA, VU2NTA, VU3GRB, VU2FTF, VU3GTF, VU2SWM, VU3SLV, VU3ALK, VU3NSP, VU2KFL, VU2PQ, VU2NGD, VU3AGU, VU2PN, VU2QGQ, VU2QGS, VU2OGR, VU2HY, VU2CRD, VU2CMR, VU2KYP, VU3KSP, VU2XMX, VU3VOC, VU3PAN, VU3BWB VU3RCN, VU3KPL, VU2MKD, VU2RPC, VU2SKD, VU3BFO, VU3WCI, VU2RAR, VU2IVG, VU3KSP, VU2RDQ, VU2SXA, VU2TNA, VU3BGS, VU3BHU, VU3CSB, VU3MHM, VU2NJN, VU3GHB VU2TES, VU2TNA, VU3HPF, VU3AZI, VU3BSW, VU2NYR, VU2CVT, VU2AMU, VU2AVE, VU3OAM, VU2DXC, VU3XTO, VU2JSH, VU2LU, VU2VTH and also many SWLs, especially OM Ramakrishnan (Bangalore), OM Abhijit Dharmadhikari (Mumbai) who have been waiting for their licences for more than two years since they passed their exams...

The different ministries/Deptts. who have particiapted the meeting are:
Deptt. of Space, Ministry of Defence, Ministry of HRD, Deptt. of IT, DOT, DCPW (Police Wireless), Confederation of Indian Industries, Orissa State Disaster Mitigation Authority (OSDMA), Govt. of Uttaranchal and Govt. of AP etc.

We expect that a National Roadmap for the promotion of ham radio in India would come up soon.
Kudos to the Disaster Management Division of the Ministry of Home Affairs for coordinating and promoting amateur radio as a tool for effective disaster communication. It is expected that the present impediments of amateur radio promotion can be removed by implementing a new amateur radio policy with active cooperation of different Ministries (e.g. DOT, Ministry of Home Affairs, Ministry of Defence, Revenue Ministries, Ministry of HRD & other concerned deptts.) and amateur radio promoting bodies.

Thanks & Best 73

Hello David,

Great to hear that you will be visiting bombay. Unfortunately i m out of country but our Bombay guys will hopefully be able to arrange an eyeball for you.

I have marked a copy of this mail to our group and they should take it on from there.

Thanks,

Mehul

Dear Mr. Merchant and Mr. Chovatia,

My name is David King, and I'm an American ham. My callsign's AA2KV.
I'm coming to Mumbai tomorrow, the 10th, and will stay until the 13th. It would be great to get a chance to do some DXing. Would it be possible to visit with someone and operate an HF rig?

Thanks,
David

Hello David,
Namaste.
Firstly very warm welcome to VU land.
You can visit my QTH just 70 kms away from Mumbai. A small village on the National Highway, 90 minutes drive. You may use my TEN TEC 580 D or TEN TEC 540. (of N7XM). Electronic key for CW. I have inverted Vee.

Last year HL1EJT/Park visited my qth.

My LL office : 02192 306162 Mobile : 093708 55031

From: Ajoy
Topic: 2162 Message: 2162

Dear Mumbai friends,

Would be carrying a short amateur video CD taken by Hams of New York on top of World Trade Centre with all the QRM caused by TVI and other wireless tx, plus without any tripod, unedited 10 minutes shot.

This CD has nothing to do with the Sep 11th attack, but became important later so I have it.

Hope there would be a short slot for this badly taken video at HFI 2004.

2169. Earthquake, Tsunamis Hit Southern Asia; VU4 DXpedition in Emergency Mode

Yahoo group: m_a_r_s
Date: 2004-12-27 15:32:38 UTC
From: VU2LOC
Topic: 2169 Message: 2169

Earthquake, Tsunamis Hit Southern Asia; VU4 DXpedition in Emergency Mode

NEWINGTON, CT, Dec 26, 2004--A magnitude 8.9 earthquake struck off the coast of the northern Indonesian island of Sumatra just before 0100 UTC today, killing or injuring many thousands and causing widespread damage. The disaster also has shut down the Andaman and Nicobar Islands VU4RBI/VU4NRO DXpedition--perhaps permanently. The team appears to have shifted into emergency mode, since one of the stations was reported on the air earlier today using battery power to maintain communication with India. The earthquake, multiple aftershocks and tidal waves--tsunamis--of 30 feet or higher following the initial quake subsequently jolted the Andaman and Nicobar Islands. The US Geological Survey's National Earthquake Information Center reports aftershocks between 5.7 and 7.3 on the Richter scale in the vicinity of the Andaman and Nicobar Islands, which are closer to the earthquake's epicenter than the Indian mainland.

"All of us here in the US are watching the unfolding news of the earthquake and tsunamis with shock and horror," ARRL CEO David Sumner, K1ZZ, messaged Charly Harpole, K4VUD/VU3CHE, who has been visiting the VU4 DXpedition. Sumner asked Harpole to relay word "that all of you, and friends and families affected by the tragedy, are foremost in our thoughts and prayers." It's not known if Sumner's e-mail got through. Harpole has been filing regular e-mail dispatches via The Daily DX.

Unconfirmed DX spots from stations hearing VU4NRO or VU4RBI after the earthquake indicate that the five team members of the National Institute of Amateur Radio-sponsored DXpedition are okay. DX spots further indicated that power in the Andaman and Nicobar Islands was knocked out by the earthquake, which occurred at around 6:30 AM local time, and the consequent tsunamis. The VU4RBI/VU4NRO team was reported on the air running 20 W from battery power, working back to India and likely passing emergency traffic--although that has not been confirmed. The DXpedition had been scheduled to conclude operations December 31.

An IndiaNews report called the destruction in the Andaman and Nicobar Islands "unprecedented, with the gigantic tidal waves sinking two civilian ships and destroying dry docks."

Hardest hit were Indonesia, southeastern India and Sri Lanka (formerly Ceylon). Estimates vary, but the natural disaster reportedly has claimed upward of 7000 lives, and the death toll continues to rise. It is the height of the tourist season in that part of the world, and many tourists were believed to have been among the earthquake's

victims.

The DXpedition is headquartered in Port Blair on Andaman. News reports earlier today said that at least 20 people were killed and more than 100 injured in the Andaman and Nicobar Islands. There was no prior warning of the disaster, and an unknown number of people among the islands' fishing crews at sea were reported missing. Many buildings and the main jetty at Port Blair were said to have been severely damaged. The airport, while damaged, was reopened and operating, and IndiaNews said the Indian Air Force had already sent three transports carrying relief supplies to the remote islands. Flights to evacuate tourists were pending.

Damage to the Port Blair jetty was hampering relief and rescue efforts by sea, according to Indian news media. Additional details were not available.

According to one news account, panic-stricken citizens of Port Blair ran out of their houses as the earthquake rocked the Andaman and Nicobar Islands. Residents were being advised to stay outdoors. The tidal wave caused some flooding in the city.

The Andaman and Nicobar Islands are in a part of the world that makes them extremely vulnerable to major earthquakes as well as to tsunamis from large local quakes and from massive distant shocks such as today's. No warning system is presently in place for any of the islands of the chain. A major earthquake in 1941 caused extensive damage in Port Blair, destroying many of its major buildings.

Today's earthquake off Sumatra is being called the fifth largest in history.

From: Sunil U K
Subject: DXpedition Team Safe: Andaman Islands

I had a Contact with VU4NRO [QRP] Operated by VU2MYH OM Mohan,
Early this morning [27-dec-04] 00:30 IST.

The Dxpedition Team is keeping Fine.
They have no power supply there, that was the msg recvd.

RST was 56 deeep QSB - QSO lasted 15 minutes.

Dear fellow HAMs keep watch on your Radio as tremors are still being
reported here and
there. May be you can be of great help!

27-dec-2004
Latest update from VU3CYL [YL Sindhu] in Cherthala 9' 44 N 76'23 E

- VU4 RBI is active on 20 meter band [11:10 IST]
waiting for permission to initiate emergency communications at
carnicobar.

Please give support to the emergency communications going on. Listen
first, Keep watch, stay on frequency.

From: "Sandeep Baruah"
Subject: Andaman Emergency Frequency

Now there are two emergency frequencies.
VU4NRO is QRV on 14.190 MHz and
VU2NRO (at Hyderabad) is on 14.160 to receive QSPs for Portblair.

Two more hams (VU2DVO and VU2JOS) have already arrived Portblair..
Some landlines are working in Andaman. But No electricity..No water at
the VU4NRO's operating location (Hotel Sinclair, Portblair).

Car Nicobar is totally cut off-which is the worst affected area.
Thousands are missing. Ham radio operators may proceed to that area after
clearance from the local authority.

As per National Disaster Management Wing information, 5 nos. of AN-32
aircrafts with a medical team and 8 Satellite Telephones arrived
Portblair.

ham stations from India are in constant communication with VU4RBI to
handle QSPs. VU2HFR is relaying to VU4 from Kolkata.
Our club VU2NCT is also on-air.
For any QSP to Portblair my mobile no. is 9811686572

From: "Sandeep Baruah"
Subject: Andaman Update

12:00 hrs UTC 27th December: The local administration has formally asked
for ham's assistance in Andaman. VU4RBI is still operating from Hotel

Sinclair. The other DXpedition station VU4NRO would be operating from the
Deputy Commissioner's office from tomorrow.
Just now heard VU2GMN in contact with VU4RBI
VU2MYH may proceed to Car Nicobar.

Radio Amateurs, DXpedition Team Handle Emergency Traffic in Disaster's Wake
---
NEWINGTON, CT, Dec 27, 2004--Here is an update on the current situation in India, the Andaman and Nicobar Islands and Sri Lanka, with thanks to The Daily DX, courtesy of its editor Bernie McClenny, W3UR, and from Horey Majumdar, VU2HFR: News agencies now report estimates of more than 21,000 feared dead from the tsunamis (tidal waves) that took place in the Bay of Bengal December 26. The estimated death toll in the Andaman and Nicobar Islands ranges from 2000 to 5000. VU2HFR reports that radio amateurs in India are handling hundreds of pieces of health and welfare traffic regarding people missing and from relatives of those living in Andaman and Nicobar Islands, which are closer to the earthquake's epicenter.

"There is presently no communication from Nicobar Islands," Majumdar reports, noting that Nicobar received more damage than Andaman. McClenny says the VU4RBI/VU4NRO DXpedition team continues to pass traffic and occasionally hand out QSOs. C. K. "Ram" Raman, VU3DJQ, reports he was in contact with Sarath, 4S7SW, a physician operating from the vicinity of a hospital in Mathara, Sri Lanka, which also was heavily hit by the tsunamis. "He is requesting food, clothing and medicines for relief," Raman reported. "He will be listening 14.195 and 21.295." Telephones are not working there, he said.

McClenny and Majumdar agree that it was fortuitous that the VU4RBI/VU4NRO DXpedition was under way when the disaster struck. "If there is a positive aspect to this disaster, it may very well be that the Indian government--and others--realize the ability of Amateur Radio during these difficult times," McClenny observed.

The initial earthquake off the Indonesian Island of Sumatra just before 0100 UTC on December 26 now has been upgraded to 9.0 on the Richter scale. Since then, the National Earthquake Information Center has reported some 18 aftershocks split between the Andaman and Nicobar Islands. The most recent,

just before 0100 UTC today, registered 6.1 on the Richter scale.

Sandeep Baruah, VU2MUE, reports two emergency frequencies have been established. VU4NRO, the team at Port Blair, will be QRV on or near 14.190 MHz. The club station VU2NRO in Hyderabad on the mainland will relay traffic to and from Port Blair.

Other emergency traffic frequencies being reported include 14.193 and 14.160 MHz in the Andaman and Nicobar Islands, 7.050 MHz in South India, 7.055 MHz in Indonesia and 7.075 in Thailand, where stations from 4S7, VU2 and 9M2 were reportedly heard.

D.V.R.K. Murthy, VU2DVO,and Jose Jacob, VU2JOS, are now in Port Blair. Reports indicate that some telephone lines are now working, but there still is no water or electricity at the Hotel Sinclair, where the VU4 DXpedition was headquartered.

In the Andaman and Nicobar Islands, the most devastated area is Car Nicobar, which has been totally cut off. It is possible that Amateur Radio operators may travel to this area after obtaining clearance from local authorities. Club station VU2NCT and VU2MUE in Calcutta all are helping with the efforts to pass emergency traffic to Port Blair.

Baruah is operating club station VU2NCT in coordination with the National Disaster Control, New Delhi. The Calcutta VHF Amateur Radio Society has set up a control station from Calcutta. Majumdar is operating that station and has been in touch with VU4RBI in the Andamans.

Charly Harpole, K4VUD, who had been visiting the VU4RBI/VU4NRO operation and filing regular reports via The Daily DX now is reported back on the Indian mainland.

Majumdar also tells ARRL that hams from Bangalore and Chennai on the Indian mainland are moving toward Nagapattinam to set up ham radio disaster communication stations at Nagapattinam in Tamil Nadu--the worst-affected areas on the mainland. The Indian Army is assisting stations on Andaman by providing logistics and backup batteries.

Majumdar says radio amateurs from Bangalore, Chennai and other parts of South India are trying to set up stations in the affected areas of Tamil Nadu.

James Brooks, 9V1YC, provided additional information via The Daily DX. He says Andaman and Nicobar Islands authorities have asked the DXpedition team for relief communications help. They have requested one station at the deputy commissioner's office in Port Blair and another on the remote Nicobar Islands. VU2RSB will be manning the station at the deputy commissioner's office in Port Blair, and VU2RSI will staff the station at the current DXpedition site until further notice.

He reports the Indian Army will be flying VU2MYH and VU2DVO out to the Nicobar Islands with three days' food, a rig, batteries and an inverted V.

The VU4RBI/VU4NOR team was allowed back into the damaged hotel building and Bharathi Prasad, VU2RBI, "is bravely operating on the fifth floor using the Yagi" despite continued aftershocks. Telephones in the building are also working again.

Commercial power is returning slowly, but the DXpedition team continues to use battery power most of the time.

The DXpedition has been suspended, but VU2RBI still is promising to hand out the contacts once emergency communications work is finished. The team has asked authorities for an extension of the DXpedition, but so far this has not been granted. "This decision may change, due to the relief communications work they are supplying," Brooks said. Bharathi Prasad, VU2RBI, will be leaving on January 1 regardless, he reports, and if any time extension is granted VU2RSB and VU2MYH will remain for an additional week, possibly longer.

Here in the US, the Salvation Army Team Emergency Radio Network (SATERN) has been monitoring HF frequencies for news and information in an attempt to assist with emergency communications as needed.--additional information from K2FF, VA3ORI and WA6KAH

The Mahatma's Hams
Owen Williamson, AC5OE

http://www.wr6wr.com/

Few present-day radio amateurs know about the essential contribution made by two Amateur Radio operators, "Bob" Tanna, VU2LK, and Nariman Abarbad Printer, VU2FU, who risked their own personal safety and freedom to help Mahatma Gandhi win India's struggle for independence. While Gandhi's life and work have long been admired in America and around the world, almost nothing has yet been published about the important role Amateur Radio operators played at a crucial moment in his struggle. Since his death in 1947, Gandhi's philosophy of homespun self-reliance has often been espoused by those who mistrust high technology. However, when Gandhian leaders were being jailed and shut out of the media, it was Ham operators who stepped forward and offered their expertise with the highest available technology of the day to provide crucial radio communications equipment and know-how for the Mahatma's nonviolent freedom movement.

At the outbreak of World War II in Europe in 1939, all Amateur Radio licenses were suspended "for the duration" throughout the British Empire. In that era, India had less than fifty licensed amateur operators, the majority British nationals involved with the colonial administration. All received written orders to turn in their transmitting equipment to the police, both for possible use in the war effort and to prevent transmitters from falling into the hands of Axis collaborators and spies.

However, Tanna, the owner and operator of Bombay's Tanna Radio Acoustics, and Printer, a freelance inventor and Principal of a Bombay technical institute, opted to hide or disassemble their rigs rather than turn them in to British colonial authorities. Printer later claimed in court that he intended to use the components of his transmitter for classroom teaching purposes only. Tanna, an active member of Bombay's nonviolent Gandhian underground , found a more immediate and urgent use for his equipment: working for the freedom of his country.

By the time of the Second World War, British imperial rule over India was thoroughly unpopular, and its future prospects after the war were in serious question. From the first outbreak of hostilities, Gandhi and his leadership were determined to take every possible advantage of world events to promote Indian independence and neutrality from both Allies and Axis. In 1940, young Tanna spontaneously seized the spirit of the moment to put "Azad Hind Radio" (Free India Radio) on the air, briefly using his 40-meter AM transmitter to broadcast Gandhian protest music and uncensored economic news from his former Ham shack, loading his wife's clothesline as an antenna. However, he was quickly arrested, briefly jailed, and his transmitting equipment seized.

In mid-1942, the situation facing the British in India had become critical, with domestic popular discontent at a boiling-point, and Japanese air-raids battering the deep-water port of Chittagong and elsewhere along India's eastern border. A land- or sea-based invasion of the Indian subcontinent was now an imminent military threat. On the home front,

a dissident faction of Gandhi's movement had broken with the Mahatma and his nonviolent philosophy, and was engaged in active material sabotage against the British "raj," cutting phone and telegraph lines, stoning troop-trains, and pulling up railway tracks.

One popular former Gandhian leader, "Netaji" Subhash Chandra Bose, had even gone to Berlin, and there received Adolph Hitler's help to establish a totally different, Axis-sponsored "Radio Azad Hind" network, which bombarded India with violent anti-British propaganda from Nazi Germany, Imperial Japan, and Japanese-held Singapore, Rangoon and Saigon. Within India, popular support for "Netaji" (Hindi for "the dear Fuehrer") was growing. Under his command, a puppet "Free Indian Army" was being recruited and trained in Japanese-occupied Southeast Asia, and would soon join Imperial Japanese forces in a joint attack on British India's remote and vulnerable northeastern Manipur front.

On 9 August 1942, after Gandhi's "Quit India" campaign brought yet another strong wave of nonviolent pro-independence protest, frantic British colonial authorities ordered sweeping arrests, including that of Mahatma Gandhi himself and his top leadership. All news of the Indian National Congress (Gandhi's umbrella-organization) was summarily banned from India's press and (state-monopoly) broadcast media. Gandhian activists who remained free saw a real danger that their movement could soon end up splintered and derailed into violent anarchy and terror, or else fall by default into the Axis orbit, unless something was done quickly to reestablish broken communication links between underground Congress leadership and the movement's grass-roots supporters.

In Bombay, clandestine Congress leader Vitalbhai Javeri and student activist Usha Mehta decided to secretly sound out the few ethnic Indians in the Bombay area who were Amateur Radio operators, among them Tanna and Printer, with a view toward establishing an underground Gandhian broadcasting station. Both Hams readily agreed, but Tanna was immediately betrayed to colonial authorities by a still-unidentified, pro-British radio engineer, whom he had quietly approached to construct the transmitter. On 31 October 1942, a fully-working HF transmitter was delivered to Tanna, but only to serve as "bait" in a British sting-operation. The Tanna family home was searched, unearthing two old, non-working UHF transceivers, and Tanna was promptly re-arrested and charged with possession of wireless telegraphy apparatus. He was held briefly, but then set free on bail.

Printer, who a colonial judge later described "a mainstay of the conspiracy," succeeded in reconstructing his old homebrew 40-meter amateur transmitter, after replacing several parts including a microphone. Though not a member of the Gandhian movement, he immediately agreed to sell the working transmitter, a 50-watt AM unit with microphone and "electrically driven gramophone pick-up," to activists. This was to become "Congress Radio," which began broadcasting 2 September 1942 on 7.12 MHz. With Printer's ongoing technical assistance, the station broadcast messages of nonviolent resistance at 8:30 a.m. and 8:45 p.m. daily through the high point of Mahatma Gandhi's "Quit India Movement," in October, and November of 1942.

Despite sporadic British jamming, the crystal-controlled signal of Congress Radio was audible on the then-unoccupied 40-meter band throughout the Indian subcontinent, and as far away as Japanese-occupied Burma. The station transmitted recordings of the Mahatma's sermons and his calls for nonviolence, uncensored news, pro-independence music, instructions for Gandhian activists, and political declarations by the movement's underground leadership. For security, programs were recorded on 78 rpm disks at a remote location and then played at the transmitting site, which was shifted randomly between

apartments rented for the purpose in different areas of Bombay. Leaflets were secretly distributed by neighborhood-level Congress activists, with times and frequencies of transmissions.

The station was detected by colonial authorities almost immediately, and Printer and the Gandhian activists involved with the clandestine broadcasts had several "close calls" when British direction-finders nearly succeeded in triangulating the location of the transmitter. On 11 November 1942, Tanna and one of his employees were arrested once again, even though no evidence could be found to directly connect them to the clandestine Congress Radio broadcasts. On November 12, Printer was arrested, and subsequently agreed to cooperate fully with colonial authorities.

It is unclear what caused his sudden change of heart, but court documents of the time show that Printer was heavily in debt, and may have been threatened with serious fraud charges connected with alleged mismanagement of his technical school. In a 1988 interview with German journalist Peter Ruhe, former Congress Radio announcer Usha Mehta suggested she still strongly lamented Printer's "betrayal," even though contemporary court records show that his cooperation with prosecutors, though complete, may not have been fully voluntary. Other Congress Radio defendants allegedly received harsh treatment at the hands of colonial jailers (including being forced to sleep lightly-clothed on blocks of ice), so Printer's decision to turn "Crown's evidence" may have been extracted by external factors.

On 12 November 1942, Printer led colonial police to Javeri's office, where the underground Gandhian leader was arrested, and later to the Congress Radio transmitting site, where Mehta and another nonviolent activist were also taken into custody. On 14 May 1943, after a secret trial in a "Special Court," Mehta was sentenced by a "Special Judge" to five years "rigorous imprisonment." Two other Congress Radio defendants were sentenced to shorter prison terms, while Javeri was acquitted, thanks to strong efforts by his defense attorney. Prosecution efforts to link Tanna to Congress Radio were unsuccessful, and he also walked free.

Nariman Printer was offered and accepted full immunity from prosecution in return for his testimony for the Crown. Printer dropped from sight after the Congress Radio trial, and his expired call sign, VU2FU, was re-issued to a different Indian amateur operator after the war. Today, even elder members of Bombay's small and tightly-knit Parsi community, to which Printer belonged, profess to remember neither his name nor his story, and no further records of his life or activities after 1943 have been located.

Usha Mehta was freed, along with all other Gandhian activists convicted of pro-independence activities, when independent India finally achieved its freedom in 1947. She later earned her PhD, and received numerous honors as a national hero and noted Gandhian scholar. She passed away from natural causes on 11 August 2000.

After independence, Bob (as he is still known on the air), VU2LK, was once again licensed as an Amateur Radio operator. He received official recognition as a nonviolent Freedom Fighter and was named a national hero for his underground radio work in the Gandhian movement. As of this writing he is, at 86 years of age, the oldest active licensed radio amateur in India (and one of the most honored). He is currently in seclusion following the death of his beloved wife of 67 years, but he has not given up on either Ham radio or the ideals that led him to risk his life and freedom a half-century ago, when he offered his technical know-how to aid the Mahatma's nonviolent struggle for his country's freedom.

2173. Asian Radio Amateurs Bridging Communication Gap following Tsunami

Asian Radio Amateurs Bridging Communication Gap following Tsunami

NEWINGTON, CT, Dec 28, 2004--Amateur Radio organizations and individual amateurs in several of the countries affected by the December 26 earthquake and consequent tsunamis in South Asia have begun emergency communication activities. The death toll from the disaster has been estimated at more than 50,000 lives, and health authorities now worry that thousands more may die from disease, due in part to a lack of potable water. Relief organizations and governments around the world have rallied to assist the victims, many of whom are homeless. DXer Charly Harpole, K4VUD/VU3CHE, was visiting the National Institute of Amateur Radio (NIAR) VU4RBI/VU4NRO DXpedition in Port Blair on Andaman Island when the earthquake struck. He said the team suspended DXpedition operation and shifted quickly to emergency mode.

"By that afternoon, the team had set up one rig outside with a mobile whip and tuner, powered by the hotel generator, and Bharathi [Prasad, VU2RBI--the DXpedition team leader] was taking health-and-welfare messages from the people standing around there," Harpole reported to ARRL. He is scheduled to relate his earthquake experience on US national television during an appearance on NBC's Today show Wednesday, December 29.

"Many wanted to tell relatives on the Indian mainland that they were OK," Harpole continued, "and Bharathi established contact with many India ham stations in various cities as needed." He said Bharathi was able to relay a message to his wife via a contact with a station in Thailand that he was all right.

Harpole, who returned to Thailand December 27 as scheduled, speculates the team may resume DXpedition operation since Port Blair escaped the worst damage, and the aftershocks have apparently ceased. Sandeep Baruah, VU2MUE, reports that VU4NRO is active on 20 meters, and two additional hams from the Indian mainland--VU2DVO and VU2JOS--have arrived in Port Blair to assist.

Calcutta VHF Amateur Radio Society Assistant Secretary Horey Majumdar, VU2HFR, relayed information from VU4RBI today that the situation in the Andamans has improved considerably with power and some telephone service being restored, although some aftershocks were occurring from time to time. He also says that VU4RBI and VU4NRO were having a lot of trouble copying signals from the Indian mainland, in part due to RF interference from local sources.

C. K. "Ram" Raman, VU3DJQ, in New Delhi reports that one member of the VU4RBI/VU4NRO DXpedition team, S. Ram Mohan, VU2MYH/VU4MYH, has

established a station on Car Nicobar Island, one of the worst hit areas that had been totally cut off. Traffic has been noted on 14.190, 14.195 and 14.200 MHz. Raman has been operating at low power to avoid interfering with a nearby army communication site.

Majumdar says the VU4MYH station marks the very first Amateur Radio operation from Nicobar Island. "Mohan's signals were extremely weak, and he was in the skip zone of the Andaman stations on 20 meters," he said. "Improvisation was the name of the game. Hams had to switch to good old CW and switch frequencies from 14.190 and 14.160 MHz to 7.090 MHz." He said in the afternoon, signals were best on 15 meters (21.240 MHz) between the Andaman and Nicobar Islands stations.

"The Amateur Radio station from Nicobar is perhaps playing the most vital part in what is turning out to be the world's largest disaster operation," Majumdar said. "Hams from Sri Lanka, Thailand, Indonesia, Malaysia, Hong Kong, Singapore, Australia and even Israel are checking into the VU emergency nets and extending their fullest cooperation in the truest spirit of Amateur Radio."

Elsewhere, he reports, upward of three dozen stations on the Indian mainland are participating in an emergency net on 7.050 MHz. He said hams from South India have established stations in Tamil Nadu, the hardest hit area on the mainland where thousands died in fishing villages. Hams were handling both health-and-welfare and emergency and medical communications, he told ARRL.

Fragmented information continues to arrive from other areas affected by the earthquake and tsunami. At this point, there have been no specific requests for communication assistance from outside the region.

Musa Suraatmadja, YB0MOS, the secretary-general of the Indonesia Amateur Radio Organization (ORARI) responded gratefully to an International Amateur Radio Union (IARU) request to assist. "So far we can still manage," he said. "Our ORARI members are amongst the first to go to the stricken areas doing emergency communication, rescue operations and other things." The 9.0 magnitude earthquake occurred off the Indonesian island of Sumatra.

Tony Waltham, HS0ZDX, vice president of the Radio Amateur Society of Thailand (RAST) called the earthquake and tsunamis "truly a disaster of catastrophic proportions which has never before been experienced by Thailand--or by our neighbouring countries that share an Indian Ocean or Andaman Sea coastline." He said communication needs in Thailand are being met.

"The situation is now under control, with Thai hams helping to relay information between the affected areas along the west coast in the south to government agencies--mostly on VHF and 40 meters as well as by disseminating news and information over VHF frequencies in Bangkok." He said EchoLink also has been playing a role in enabling

hams in Thailand to relay information to friends and relatives of those who had been on vacation in the stricken areas.

Waltham says what is needed most is help for the thousands of injured and homeless, and RAST now is accepting donations for that purpose to pass on to the Thai government. He said the best method to donate is by wire transfer.

Contributions are being accepted at Siam City Bank, Ratchawat Branch No 111, Account type: Saving; Account number: 111-2-22688-4; Account name: RAST (Radio Amateur Society of Thailand under the Royal patronage of His Majesty the King).

He requests that donors send details of their support to RAST via e-mail dx@... "for our records and so that we can acknowledge this and give full credit."

The ARRL and IARU have been sharing information with other agencies and organization.

Salvation Army Team Emergency Network (SATERN) National Director Pat McPherson, WW9E, reports Salvation Army personnel continue to offer emergency disaster services aid in southeastern Asia and costal India. "Salvation Army personnel are based in many of the devastated areas and have been on the forefront of offering aid and relief to the people struggling after this unexpected tragedy," he said. "Salvation Army volunteers fed more than 1200 people in the Kanyakumari and Muttom areas in India and many Salvation Army facilities are being used as feeding sites and emergency shelters in affected communities."

Salvation Army Emergency Disaster Services teams are also assisting government and other agencies in assessing needs and trying to find ways to meet them. The Salvation Army's International Emergency Disasters Services Office located in London is coordinating the relief operation.

Third Party Traffic Question

Since none of the countries affected by the earthquake and tsunami have third-party traffic agreements with the US, the question has been raised about the legality of such traffic--especially health-and-welfare messages--between those countries and US amateur stations. A staff member in the FCC's Wireless Telecommunications Bureau points out that the international Radio Regulations as revised at World Radiocommunication Conference 2003 (WRC-03) provide that amateur stations may be used for transmitting international communications of behalf of third parties only in case of emergencies or disaster relief.

"An administration may determine the applicability of this provision to amateur stations under its jurisdiction," the FCC staff member told ARRL. Although the FCC has not formally adopted the changes approved

at WRC-03, he continued, "the FCC has no objection to US stations passing disaster-related traffic to and from stations in the affected areas if the administrations responsible for the Amateur Service in those countries do not object to their amateur stations receiving messages from our amateur stations on behalf of third parties."

Dear VU2AXN, VU2HIT and VU2ZRS,

Thank you very much for reviving the repeater this morning. Last evening ie 29th Dec the repeater was not functioning and the conditions were so bad that the net could not be conducted in all its glory. Now that things are back on line its a major relief. We did not realise how dependant we were on the repeater till it went off air.
Anyways, we look forward to VU2NLF's final approval for the placement of the antennae and we are back in full form.

Thanks once again for all the trouble you guys went through to get us back in business.

2176. Amateur Radio "Saved Lives" in South Asia

Yahoo group: m_a_r_s
Date: 2004-12-30 10:09:15 UTC
From: VU2LOC
Topic: 2176 Message: 2176

Amateur Radio "Saved Lives" in South Asia

NEWINGTON, CT, Dec 29, 2004--As governments and relief organizations attempt to gauge the scale of death and devastation from the December 26 South Asia earthquake and tsunami and to aid the victims, Amateur Radio operators throughout the stricken region are offering their services as emergency communicators. The death toll from the disaster now is being estimated at upward of 60,000. Thousand remain unaccounted for, millions have been left homeless and many are without food or water. Victor Goonetilleke, 4S7VK, president of the Radio Society of Sri Lanka (RSSL), reports that "uncomplicated short wave" radio saved lives.

"Ham radio played an important part and will continue to do so," he said in an e-mail relayed to ARRL. Goonetilleke said that even Sri Lanka's prime minister had no contact with the outside world until Amateur Radio operators stepped in. "Our control center was inside the prime minister's official house in his operational room," he recounted. "[This] will show how they valued our services."

Goonetilleke reports that even satellite phones failed, and only the Amateur Radio HF link remained open. One problem: Batteries were running out, and there are no generators to recharge them.

Charly Harpole, K4VUD/HS0ZCW, now in Bangkok, Thailand, reports he's been helping to handle emergency traffic to India on 20 meters. Harpole's scheduled appearance this week on NBC's Today show apparently was scratched, although he has told ARRL that CNN has contacted him about an interview.

Harpole had been visiting the VU4RBI/VU4NRO DXpedition in the Andaman and Nicobar Islands when the earthquake and subsequent tsunami struck.

The DXpedition's sponsor, the National Institute of Amateur Radio (NIAR) in India, told ARRL that the DXpedition team is continuing its communication efforts at the government's request on behalf of rescue and relief operations in that region. "Ham radio is the main link from the people of Andaman Island to people all over," said S. Suri, VU2MY, the NIAR's chairman and director.

Many radio amateurs on the Indian mainland are said to be pitching in to handle emergency and health-and-welfare traffic. Some communication has been on CW and PSK31 to overcome poor conditions and interference.

Wyn Purwinto, AB2QV, relayed information he received via the Indonesia Amateur Radio Organization (ORARI). He notes that the government of Indonesia's Aceh province has banned Amateur Radio since the rebel

uprising in that region, and he's asked the Aceh government to lift the ban so Indonesian amateurs can handle emergency traffic. Aceh was among the most severely affected regions in Indonesia.

Some emergency communication between amateurs in the North Sumatra capital of Medan has been established with the Aceh provincial capital of Banda Aceh on 80 meters and with the east coast city of Lhokseumawe through a linked VHF repeater.

Purwinto says YB6ZZ or YB6ZES are serving as net control stations of a national emergency net using 7.055 and 21.300 MHz as well as several linked VHF repeaters throughout northern Sumatra and along the west coast of Malaysia. He reports Anto, YD6AT, is standing by on 3.815 MHz in Banda Aceh. He reports several cities in coastal areas of Sumatra experienced power, telecommunication and water outages.

The Wireless Institute of Australia has asked its members to monitor HF frequencies and report any requests for assistance.

Echo (AO-51) Satellite Put into Emergency Mode

AMSAT-NA will put its Echo (AO-51) satellite into 9k6 bps store-and-forward mode to assist in emergency communication in the wake of the earthquake-tsunami disaster. The current AO-51 schedule will be on hold for the interim, and a planned mode change to FM repeater mode in high power will not occur. AMSAT News Service says the change will occur December 30 at approximately 0305 UTC, putting AO-51 into store-and-forward PacSat BroadCast Protocol (PBBS) mode. The PBBS downlink will be 435.150 MHz, FM 9600 baud PBBS. The uplink will be 145.860 MHz.

"The PBBS will still be open to general amateur use, but amateur operators should be ready to cease BBS operations at any moment, when we start to receive message traffic," says Mike Kingery, KE4AZN, of the Echo Command Team. "We ask that all unattended PBBS operation stop until further notice." He notes that AO-51 PBBS users may be requested to help download and forward messages.

Boat Watch Net Seeking Missing Vessel Reports and Information

Mike Pilgrim, K5MP, reports that the Boat Watch Net is seeking and coordination reports on vessels that have not been heard from since the earthquake and tsunami. Pilgrim has begun a listing in the "Current Watch Full Text" link of the International Boat Watch Web site. Pilgrim emphasizes that the Boat Watch Net service is strictly limited to mariners in the affected area and is not intended nor prepared to handle general health-and-welfare inquiries.

Third Party Traffic

Although the US does not have third-party traffic agreements with any of the countries affected by the disaster, international emergency and disaster relief communications are permitted unless otherwise

provided. The international Radio Regulations as revised at World Radiocommunication Conference 2003 (WRC-03) provide that amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief.

While FCC Part 97 has not yet been updated to reflect this change, ARRL understands from FCC staff that if the government agencies responsible for the Amateur Service in India, Sri Lanka, Thailand, Indonesia, and other affected countries do not object to their amateur stations receiving messages from our amateur stations on behalf of third parties, the US has no objection to its amateur stations transmitting international communications in support of the disaster.

A government may determine the applicability of this provision to amateur stations under its jurisdiction. This could include either permitting a broader range of international third-party communications, or prohibiting even emergency and disaster relief communications.

Salvation Army Team Emergency Radio Network (SATERN) National Director Pat McPherson, WW9E, says The Salvation Army is providing food, clothing, shelter and fresh water to victims in Sri Lanka and India.

The Salvation Army also has issued an urgent appeal for funds. Donations earmarked "South Asia Disaster Fund," may be sent to local Salvation Army chapters, made online via The Salvation Army Web site or by calling toll free 800-SAL-ARMY (800-725-2769).

2177. Sri Lanka Tsunami – Amateur Call

Yahoo group: m_a_r_s
Date: 2004-12-30 10:12:05 UTC
From: VU2LOC
Topic: 2177 Message: 2177

Sri Lanka Tsunami – Amateur Call

29 December 2004 19:25 hours

Sri Lanka's amateur radio operators are offering their services to any area that needs communications services.

Until yesterday The Radio Society of Sri Lanka operated a short wave radio link between Hambantota and the Prime Minister's disaster management office at Temple trees, and government offices in the stricken area.

"We closed the link after the police got a communications link up in Hambantota," Victor Goonetilleke, President of the Radio Society of Sri Lanka said.

"We went in because the District Secretaries office only had a satellite phone and communications was difficult."

Amateur radio operators, popularly known as 'Ham' operators are hobbyists who are licensed to operate two-way communications equipment.

The Hambantota station was operated by Asantha Illesinghe (4S7AK), Dimuthu Wickremesinghe (4S7DZ), Kusal Epa (4S7KE).

Mobile signals also began to come up later. As landlines went down, Sri Lanka's mobile networks provided vital links to many tsunami-hit areas.

Amateurs used to be the only line of communication to disaster struck areas in the past, playing a vital role in disaster recovery and mitigation, though resilient mobiles in Sri Lanka kept many areas covered in the current disaster.

The Radio Society is standing by to relay messages from any area that need their services, subject to the availability of manpower and resources.

At the moment a team is being deployed to Tangalle to help relay messages from the members of the public to their loved ones.

"We are preparing to operate a mobile unit between Matara and Galle," Goonetilleke said.

"We can establish links especially government offices do not have proper communications facilities."

A few years ago, a disaster mitigation plan proposed by the Telecom Regulatory Commission of Sri Lanka listed the integration amateurs in a national disaster recovery action plan.

But the amateur community in Sri Lanka is not getting enough young blood to keep it going partly because getting an amateur radio license is a tedious process, requiring defence clearances, in addition to an examinations and licensing by the telecommunications regulatory authorities.

Often Hams residing in disaster struck areas are the only link to the outside world.

An amateur who gets on air can be virtually guaranteed to talk to a counterpart as soon as get on to a crowded 'ham' band, where others of his ilk are chatting away.

Short waves, which propagate by bouncing off the ionosphere and the earth's surface, can cover large distances.

A small desktop transceiver with an output of a few hundred watts can even establish communication between two countries, thousands of miles apart.

Technology to the aid of Tsunasmi victims: Ham goes:

[India News]: Vadodara, Dec 30 : The Institute of Amateur Ham Radio Station, a Gujarat government supported NGO, would set up Ham radio stations in Tsunami ravaged areas of the Andaman and Nicobar Islands to help the victims communicate.

"We had made the offer for setting up Ham stations to Lt Governor of Andaman & Nicobar Prof Ram Kapse during a meeting with him yesterday," president of the Institute and state civil supplies department additional chief secretary Sudeep Kumar Nanda told PTI over the phone from Port Blair today.

Kapase has accepted the offer and we would now set up the stations after necessary clearance from the concerned agencies, Nanda said.

Kapase was informed that Ham radio stations set up in the earthquake devastated areas of Kutch in January 2001 had helped establishing effective communicative system which make the job easier for the administration.

It was also used effectively during cyclone in Orissa some years ago, he added.

Nanda is part of the team, headed by Gujarat Law Minister Ashok Bhatt, which is in Port Blair for handing over Rs two crore cheque and relief materials from Gujarat government to Kapase for Tsunami affected people.

The Gujarat team would now visit Pondicherry to hand over contribution and relief material from Gujarat government to the Lt governor there, Nanda added. PTI

2187. Ham Radio for Tsunami Hit Andaman and Port Blair

Yahoo group: m_a_r_s
Date: 2005-01-02 07:15:47 UTC
From: VU2LOC
Topic: 2187 Message: 2187

India, Port Blair, Jan 2, 2005 Tsunami Crisis) Bharati Prasad, India's foremost amateur ham radio operator, was attempting a new transmission record here when the Dec 26 earthquake followed by the giant waves hit the archipelago.

When tsunami waves broke all communication lines across India's Andaman and Nicobar Islands, ham radio came to the rescue.

Faced with a massive humanitarian crisis - with hundreds dying and islands with thousands of people completely out of reach - Prasad quit her project and jumped into action.

"In situations like this, the only thing that works is radio," said Prasad, one of the 20,000 Indian ham radio operators - people who run powerful radio transmission sets connecting with fellow enthusiasts across the world.

"The phone links had disappeared, so I started using my radio set to connect with people in mainland (India) and giving information about people in Port Blair.

"In fact, I was one of the first people to get in touch with a radio guy in Thailand who told me what was happening there barely minutes after the waves hit (the beach town of) Phuket."

More than 700 people are confirmed dead and hundreds still missing in the Andamans a week after the tsunami ravaged coastlines across Asia, killing more than 120,000.

Sitting in the room in the Port Blair hotel - two cracks near the door bear ugly testimony of the quake - Prasad spoke about how the first people who used her facility were bellboys and bearers at the hotel.

"There was nothing else. There was some talk of satellite phones but that was way beyond their reach. This was free," smiled Prasad, 46, looking like a mother who is a little harried, in her brown cotton sari and thinning black hair tied in a small bun.

"They brought me slips of paper which had the names and the phone numbers of their family members and I asked by radio contacts in Chennai, Delhi and Mumbai to make phone calls and tell them that their boy is safe," she said.

So impressed were local administrators by her work that she has been asked to set up eight radio centres throughout the region, including remote, and worst-affected, islands like Car Nicobar and Campbell Bay.

"The radios are really helping us," said Andaman police chief S. B. Deol. "There are providing invaluable information about conditions around the islands - who needs what, where.

"Now within a day or two 15 radio operators (from the National Institute of Amateur Radio in Hyderabad) are coming here and we would be dispatching them to the remote islands. They will be our connectivity points."

Prasad, who goes by the codename VU2RBI in the three million worldwide radio fraternity, has been an enthusiast for more than 25 years.

"I am a science graduate who got interested in ham radio because my sister and brother-in-law used to do it," said Prasad, whose 15-year-old son is one of the world's youngest radio operators.

"I got my licence after a couple of years and, since then, this has been the primary thing in my life. It wasn't easy getting the licence; you have to clear electronics tests and then get home ministry security clearance.

"I was one of the first women in India to get a licence.

This time, Prasad had come to Port Blair - the first person in 17 years to get permission to do radio work here - to get a record of contacting more than 35,000 people around the world through her radio set.

"We wanted to know how connected radio could be even at a (remote) place like the Andamans."

But all that changed with the tsunami. "Obviously disaster relief first," said Prasad.

"In fact, I believe that the ham radio was invented to help in crises like this when nothing else works."(IANS) - Express Newsline.

From: VU2LOC
Topic: 2188 Message: 2188

HAM contact numbers for Andamans search:

[India News]: Kolkata, Jan 1 : Amateur HAM Radio Operators have been helping in tracing the dead and providing information on the missing in calamity hit Andaman and Nicobar Islands.

An official release said here today those seeking information on their near and dear ones in the worst-hit island territory, may contact Ambarish Nag-Biswas@computerraju (Res no : 2563 8383) and Indranil Majumdar (Res no : 2440 6960) -- two HAM operators in Kolkata coordinating with 15 counterparts in the islands.

To get in touch with the HAM volunteers, the India code or Kolkata code (91-033) as applicable from other locations should be dialled first.

These volunteers, it said, had proved 'very useful' during the search and relief operations in Gujarat earthquake and the Orissa cyclonic storm.

According to the release, this group provides active on-the-spot services to the Gangasagar Mela authorities during the annual pilgrimage and for tracing missing pilgrims. PTI

2190. Radio lifeline for stricken islands

Yahoo group: m_a_r_s
Date: 2005-01-04 12:57:44 UTC
From: VU2LOC
Topic: 2190 Message: 2190

KOLKATA: It is sheer providence that a team from the National Institute of Amateur Radio was in the Andamans on an expedition when the Tsunami struck on December 26. And even more providential that Port Blair's first HAM radio station got operational on December 15 - the 1987 bar on amateur radio operators was lifted last year.

Within hours of the tragedy, two stations had been set up at Port Blair and one more at Car Nicobar. Conventional communication links between the islands and the mainland having been snapped, these amateur radiomen turned out to be the only hope for thousands of marooned survivors. Now, a direct control room has been set up in Kolkata which acts as a relay centre between the islands and the rest of the country. "It is easier to reach Kolkata by radio from the Andamans.

We are relaying messages for the administration and relief organisations, such as the International Red Cross. A number of personal requests are also coming in from people whose relatives are still missing. We are doing our best to locate them but it is very difficult to trace individuals as we lack the manpower and the means. We have succeeded in helping out only 15-20 per cent of those approaching us with such requests," admits Indranil Majumdar of the Calcutta VHS Amateur Radio Society.

However, they have managed to provide accurate information about the state of affairs on individual islands. "Many have asked us to find out about the situation on a particular island. We have been able to tell them whether that island has been affected or not," Mukherjee added. According to him, 14-15 amateur radiomen will be soon leaving Chennai for the Andamans to set up additional stations at Little Andamans and other islands.

He thinks that the situation will be slightly better then and personal queries can be addressed. Normally, no amateur radio licence is issued for the Andaman and Nicobar Islands due to their strategic location. However, in international circles, the islands continue to remain an important radio address. "The last expedition had been to the Andamans in 1987.

The home ministry does not allow radio transmission from the Andamans. A team from NIAR began their expedition from December 1, 2004, but it was cut short by the Tsunami. Teams were then created to set up the stations at Port Blair and Car Nicobar," Majumdar said.

In the past, the amateur radiomen have performed wonders, particularly during the Bhuj earthquake and the supercyclone in Orissa. Every year

during the Gangasagar Mela in South 24-Parganas, these radiomen continue to remain the backbone of communication.

"For the Andamans, we have set up an emergency net and have kept the 20-and 40-metre bands open. The telephone number of the direct control room is 24603433. Even for the Gangasagar Mela this year, we shall take along high frequency sets and special antennae, so that we can be ready for any eventuality," Majumdar said. Amateur radio stations in Kolkata, Bangalore, Hyderabad are connected to a Delhi-based Ham operator.

Topic: 2191 Message: 2191

Dear Members,

Hams from NIAR & GIAR are doing a very good job to provide communications at The Disaster at Andaman & Nicobar Islands.

MARS is just providing communications from Mantralaya in Mumbai thats all. we have not deployed any team nor are we planning to do so, as already there are 23 hams from all over india working from these islands.

Recently T.V and Press releases have been made by Micky - VU2IZO, Santosh Vedente - VU2IES and Ankur Puranik - VU2AXN. These press releases are giving a very wrong picture.

In the article in Maharshtra times (Mumbai times) it is stated by Micky that we are providing communications to Ministry of Home Affairs, Government of Maharashtra, B.M.C and Indian Airforce. it also states that 750 Hams from mumbai are monitering the band.

These all information are all false.. it is seriously damaging the reputation of our society and they have to be stopped immediately. we cannot take credit for things which we are not doing..

In the photo taken at Micky's residence shows them communcicating with Andaman Islands on VHF 144.100 Mhz, well I made our Mumbai repeater, I did not know that you could talk to Andaman Islands using this repeater.

When our team had provided vital communications during Gujarat Earthquake Disaster, One Captain Manek from Skyline aviation had taken credit stating that it is their team which is providing communication.. on return of our team from Gujarat, we took up the matter with captian Manek, and he gave a press release to all the concern news papers stating that he had given wrong information and it was MARS which actually provided the communcitions...

Now in this case are we not doing the same thing as Captain Manek ? are we not trying to take credit for this we have not done... that also by our members who are not even on our Disaster Management Team.

Weather members of MARS or not, how can any ham do this kind of condemed act... how can you take credit for things you are not even involved...

In past mails have been posted on the our e groups about the policy of MARS for media and press Release.. it was clearly mentioned that only the office bearers and the event managers are allowed to give

any press release.

All members are therefore informed the following:-

No members are authorised to give press release on behalf of our society.

All press releases must be cleared with the secretary (VU2NLF). or the event manager, in this case of disaster Management it will again be me (VU2NLF). for other events like JOTA or Ganesh visarjan or Ham Radio classes, the respected event managers are authorised and can give the necessary Press releases..

Micky - VU2IZO was clearly given instructions by me (Secretary of MARS and Head of our ARES Team), NOT to give any press release, inspite of this warning articles have been publised in Mumbai times and today in Indian Express... once again giving wrong information stating that we have 15 hams operating from Mantralaya and also stating that 100 B.M.C officer are going to become Ham radio operators..

All these presss releases are immoral and inethical, we CANNOT take credit for things we are have not done... I fail to understand how members like VU2IZO, VU2KDM, VU2IES and VU2AXN have supported this condemed act. do they have no shame ?

This cannot be tolarated, how can you take credit for things you are not doing ? VU2IZO is not even on the disaster Management team, how can he give press release... he is also not on the managing committee of MARS...

These press releases have made great damage to the reputation of our society.. I am being questioned by the Government and asked for clarifications for the press releases.

I as a secretary of the society now have no choice but to take necessary displinary actions with the concerned members involved in these unauthorizesd press releases..

The Managing Committee of MARS will be held on friday, and the necessary action and fate of these members will be decided accordingly.

All the decissions taken by the managing committee will be declared during the Sunday Monthly Meeting on 9th January 2005 at 10:00.

All members are once again informed NOT to give any press releases.

73
Nilesh - VU2NLF,
Secretary MARS, Head - ARES Team.

2192. "Angel of the Seas": Post-Tsunami News Coverage Raises Ham Radio's Global Visibility

Hello all friends,
HNY 2005.

I have read the article in The Indian EXPRESS-Mumbai newsline.
I was happy to say that some people started to know about HAM RADIO.
I received few calls from my friends about this article. They wanted to know more about ham radio now. Some wanted to join classes at Mumbai.

We should publish daily some good article in the papers, BUT I MUST SAY THE PHOTOS MUST BE OF GOOD RIGS/ANTENNAS/GOOD SET UP. PHOTOS CAN BE TAKEN AT SOME HAM SHACK ,WHO HAS A GOOD SET UP. This is the time during TSUNAMI wave we can put up ourselves...
LET THE PEOPLE KNOW MORE ABOUT HAMS AND THEIR SERVICES OFFERED DURING GUJARATH/BIHAR.
YOU CAN ALSO PUBLISH SOME ARTICLE ON THOSE OLD DAYS.
NOW IS THE TIME TO GET MORE AND MORE AND MORE... I remember the lecture of VU2LIC.

Our MARS and other individual hams have done so many field trips, sos training, some contests, DF etc.. that can also be publisehd, saying TRAINING HAMS FOR DISASTER COMMUNICATION. and the article should go on....

But some body to take up this job seriously, scrutinise and put up good article daily. only HAM HAM HAM .... Let the Bharti VU4RBI also get her credit in our papers. Along with her Apni bhi roti shake lo
This is the time public will know more more more about Ham Radio.

This is my view.

I have also relayed few welfare msgs received from Bharti during SOS.
Passed on LL (STD) to longer places.

Namaste

Basappa Arabole.

2194. Amateur Radio Set New World Record, 13 Million Miles per Watt:

Yahoo group: m_a_r_s
Date: 2005-01-06 12:22:49 UTC
From: Sriram N
Topic: 2194 Message: 2194

From eham.net:

Bill Tippett, W4ZV, of New London, NC correctly copied code word OMAHA from the N2XE beacon transmitting with a peak carrier power of .0000406 watts at 3.5455 MHz on the 80 meter Amateur Radio band. Bill confirmed reception of the beacon at 2328Z, January 2, 2005. The precise distance between the two stations is 546.8 miles, establishing Bill's record reception distance at 13,467,980 miles per watt. Tippett used a Ten Tec Orion Transceiver with a 1000 foot Beverage antenna (named after Dr. Harold Beverage who invented it in the 1920s).

2195. 144.100 ??? dxing???

Yahoo group: m_a_r_s
Date: 2005-01-06 18:41:39 UTC
From: Ankur Puranik
Topic: 2195 Message: 2195

"In the photo taken at Micky's residence shows them communcicating with Andaman Islands on VHF 144.100 Mhz, well I made our Mumbai repeater, I did not know that you could talk to Andaman Islands using this repeater."

I aint putting this mail to support any individual, nor do i have a grudge against anyone, but would like to bring the fact into light that IT IS POSSIBLE TO WORK DX STATIONS WITH VHF.

SO pls do not have a laugh at the pic showing the rig on 144.100 communicating with dx stn.

I have myself worked dx station from germany on the first day i got my ticket using my handy.

When a rig is hooked up to the echo-link, working dx stations anywhere in the world is possible. even with a 5 watter handie-talkie.

SO I HOPE ITS CLEAR THAT... IT IS POSSIBLE TO work DX stations on local vhf repeater even with a vhf base and even with a vhf handie talkie when hooked with echolink with a vhf setup.

dear ankur,

I am very well aware that we can use VHF and echolink to work DX stations...

The question is were you actually working Andaman Islands using Echolink at the time of the interview ?? can we be honest ??? do we have lie and lie again to hide and cover one lie ....

If we are able to connect to Andamans Island using Echo Link, then it means the telephone lines are working fine in Andamans Islands,, which would mean that our communications would not be required at all.

I am in touch with port blair, Car nicobar and other islands, the telephone and mobile network have just started...2 days ago..

Please take my advise and do not try to give any justifications... you are simply making a fool of yourself..

Very good record of copying.

I had QRP QSO with W5DV/Chas of TEXAS on 28 Sep 2000, at 1235 UTC,
on 14 MHZ, CW, rig RM 96, Antenna inverted vee, with SWR 1.7.
Power output only 1.8 Watts.

VU2NLF (+ SWS & NFS-The President's award winner) visited my QTH.
He saw no power at my QTH. He simply kept his field day battery on his sholder and carried it to my first floor room. Asked me to come on 2M daily. This beautiful gift made me to receive QRP ARCI's 1000/MILE PER WATT Award certificate.

It is heard, In 1960's, one very old timer made such QRP QSO possible. But Mine is the only QRP QSO which is registerd at QRP ARCI. Hi ! Hi !

USE QRP and avoid QRMs.

2199. Amateur Radio Praised as Lifeline in South Asia

Yahoo group: m_a_r_s
Date: 2005-01-08 07:53:46 UTC
From: VU2LOC
Topic: 2199 Message: 2199

Amateur Radio Praised as Lifeline in South Asia

NEWINGTON, CT, Jan 7, 2005--As the tsunami relief and recovery effort continues in South Asia, Indian Prime Minister Manmohan Singh has joined those paying tribute to Amateur Radio's ongoing emergency communication role. Director and Executive Vice Chairman S. Suri, VU2MY, of India's National Institute of Amateur Radio (NIAR), noted January 5 that the PM "was all praise for hams in India and the entire world who helped us in this hour of need." Suri said the administrator of hard-hit Car Nicobar Island has asked NIAR to keep on duty Rama Mohan, VU2MYH, and five other radio amateurs who have been providing communication with the island since shortly after the December 26 disaster.

"The district administration chief of Car Nicobar Island spoke to me this morning to say even now it is only the ham communication that is aiding them for relief and rehabilitation measures," Suri said in an e-mail to Jay Wilson, W0AIR, of the Disaster Preparedness and Emergency Response Association (DERA) and shared with ARRL. Mohan, who had received DERA training in the US, was part of NIAR's VU4NRO/VU4RBI DXpedition to Andaman and Nicobar Islands. When the earthquake and tsunami struck the region, DXpedition team leader Bharathi Prasad, VU2RBI, promptly shifted the operation to handle emergency traffic and health-and-welfare inquiries between the island and the Indian mainland. More than 20 Indian radio amateurs are said to be involved in providing emergency communication support in the Andaman and Nicobar Islands--a location from which the Indian government had not allowed Amateur Radio operation for 17 years until the recent NIAR DXpedition.

In the disaster's immediate aftermath, Suri said, Mohan and other DXpedition team members risked their lives to alert the chief of administration on Andaman Island, since tsunami waves later overran the road they had traveled. An NIAR staff member, Jose Jacob, VU2JOS, has provided emergency communication from another remote island, Hutbay. For the first nine days after the disaster, only the NIAR team was assisting, until other amateurs from the mainland were able to reach the Andaman and Nicobar Islands.

Bharathi Prasad, VU4RBI, demonstrates ham radio to naval cadets during the VU4RBI/VU4NRO DXpedition on Andaman Island. She quickly shifted to emergency communication mode after the earthquake and tsunami struck the region. [Henryk Kotowski, SM0JHF/VU3HKE, Photo--used by permission]

Bharathi Prasad reported via Tony Waltham, HS0ZDX, that the VU4NRO/VU4RBI logs are safe and at the NIAR headquarters in Hyderabad. QSLing will commence once the emergency operation in the Andaman and Nicobar Islands concludes. DXer Charly Harpole, K4VUD/HS0ZCW, now near Bangkok, Thailand, told The Daily DX that QSL cards already are showing up at NIAR.

Harpole, who was visiting the DXpedition in Port Blair on Andaman Island when the earthquake and tsunami hit, has since been helping to handle emergency traffic from Thailand, where his wife's family lives. "The DXpedition and the emergency seem to have energized VU hams all over," he said in an e-mail made available by Carl Smith, N4AA, who edits QRZ DX. "I have been listening to the traffic from VU4 back to the India mainland, and by now it is smooth as silk with lots of H&W and some government messages running almost constantly."

Harpole advised amateurs worldwide to avoid the primary emergency traffic frequency of 14.190 MHz.

"The military and government are partners now with these hams," Harpole observed, noting that hams from India have been deployed throughout the Andaman and Nicobar Islands.

In Thailand, he reports, hams have been using mostly 2 meters for their emergency traffic "and doing a huge job." Harpole said he's heard very little from Bangladesh, and nothing from Sumatra and Burma (Myanmar), "which may tell us something," he added. The earthquake's epicenter was some 100 miles off Sumatra, which is part of Indonesia.

Charly Harpole, K4VUD, seen here at his Florida station, was visiting the VU4RBI/VU4NRO DXpeditioni when the earthquake and tsunami hit. He has since been operating from Thailand as HS0ZCW.

Just three days after the calamitous tsunami, Radio Society of Sri Lanka (RSSL) President Victor Goonetilleke, 4S7VK, declared that "uncomplicated short wave" radio had saved lives.

"Ham radio played an important part and will continue to do so," he said in an e-mail relayed to ARRL. Goonetilleke said Sri Lanka's prime minister had no contact with the outside world until Amateur Radio operators stepped in. "Our control center was inside the prime minister's official house in his operational room," he recounted. "[This] will show how they valued our services."

Ironically, Mohan's emergency operation marked the very first Amateur Radio operation from Nicobar Island. "Mohan's signals were extremely weak, and he was in the skip zone of the Andaman stations on 20 meters," said Horey Majumdar, VU2HFR, in Calcutta, shortly after the disaster. "Improvisation was the name of the game. Hams had to switch to good old CW and switch frequencies from 14.190 and 14.160 MHz to 7.090 MHz." Majumdar said hams from Sri Lanka, Thailand, Indonesia, Malaysia, Hong Kong, Singapore, Australia, Israel and elsewhere "have been checking into the VU emergency nets and extending their fullest

cooperation in the truest spirit of Amateur Radio."

According to the latest estimate, more than 150,000 people died as a result of the tsunami, about one-third of them children. Many others are still unaccounted for, and health workers in the affected countries now fear disease will raise the toll substantially.

Although the US does not have third-party traffic agreements with any of the countries affected by the disaster, international emergency and disaster relief communications are permitted unless otherwise provided. While FCC Part 97 has not yet been updated to reflect revisions to third-party traffic rules at World Radiocommunication Conference 2003, ARRL understands from FCC staff that if the government agencies responsible for the Amateur Service in affected countries do not object to their amateur stations receiving messages from US amateur stations on behalf of third parties, the US has no objection to its amateur stations transmitting international communications in support of the disaster.

From: VU2LOC
Topic: 2200 Message: 2200

HAM global centre at Sagar Island during Gangasagar Mela:

[India News]: Kolkata, Jan 8 : Union Communications Ministry has issued licences to city-based amateur HAM Radio operators to set up a round-the-clock global communication station at the Sagar Island during this year's Gangasagar Mela.

The facility would be available from January 9 to 16 at the fair grounds and relations and pilgrims still searching for their near and dear ones hit by the tsunami would be able to avail the facility free of cost at the centre being put up, an official release here said.

HAM volunteers are setting up two special high frequency sets to provide security and communication-related assistance to the fair administration.

A 25-member HAM brigade will assist the administration at the Sagar Island in security vigil and in other aspects during the annual fair, the release said.

HAM volunteers had played an important role during search and relief operations in the aftermath of the Gujarat earthquake and the super cyclone in Orissa. PTI

It has been resolved by the Managing Commitee that :-

Unauthorized T.V. interviews and press releases were given by Milind Korde - VU2IZO, Santosh Vedante - VU2IES, Sanjay Kadam - VU2KDM, Dr.Anukant Mital - VU2TAL and Ankur Puranik - VU2AXN.

Micky - VU2IZO was clearly given instructions by me (Secretary of
MARS and Head of our ARES Team), NOT to give any press release,
inspite of this warning articles have been publised in Mumbai times
Indian Express and Mumbai Samachar.

During the monthly meeting on 9th January 2005, VU2IZO and VU2IES were asked to make their clarifications, but we did not get any conviencing reply from them for these unauthorised activities.

Santosh Vedante - VU2IES has given us a written apology and has informed us that he has not actually given any press releases, all the press releases were given by micky. only his picture was taken.

VU2TAL, VU2TAL and VU2AXN failed to remain present during the meeting.

In view of these unauthorized activities and consistent Alcohol problem of Micky - VU2IZO the Managing Committee has excercised their rights and have passed the following resolution :-

Mr. Milind Korde - VU2IZO is expelled from the society and his membership stands cancelled with immediate effect.

Mr.Santosh Vedante - VU2IES, Mr. Sanjay Kadam - VU2KDM, Dr.Anukant Mittal - VU2TAL and Mr.Ankur Puranik - VU2AXN are put under temperory suspension for 3 months (i.e. till 31/03/2005), they will not be allowed to participate in activities of our society. All their previlages will all remain suspended for 3 months.

Dear Members,

MARS will be conducting a Simulated exercise for disaster communication on 28th/29th/30 January 2005 (Fri/Sat/Sun). all participants will be leaving on 27th Jan - Thursday evening...

all participants will be at the same location. This exercise is a complete crash course for beginers and refreshers course for seniors.

All new callsigns holders, not on the ARES Team, and wanting to join the AES team may come and enroll at the briefing meeting on 23rd January at 10:00 AM at B.S.Bengelle girls School at churchgate..

It is mandatory for all the ARES team members to attend this exercise..

The above events can only be termed as "ugly". We are members of a group pursuing a hobby which involves friendship above everthing else. We, at least I, definitely havent joined the army!!!!So I dont understand this rotten business of suspension and expulsion.
The ham community on the whole is shrinking. Acts like these would surely keep people away from it. Its not condusive to a healthy atmosphere at MARS. One or a group of persons cannot play"God" and give out punishments for "sins" commited.
As far as Mickey is concerned, he may be a loudmouth and shot his words off in the interview, but this definitely doesnt warrant an expulsion. If his alchoholism bothered the committee so much, then I fail to understand how he was in the "Hamfest committee" and it was ok to accept all the funds that he raised for the event!!!!. It would definitely be good for the dignity of this group if the the managing commitee stops mentioning member's personal problems as reasons for actions taken against them. AXN,TAL,KDM and IES, could have just been given a stern dressing down at the most. I mean, what all is the "Managing Committee" going to control?
Once again, Ham radio is about enjoyment, not hunting. Hunt for more qsos on air, not your friends.

Topic: 2203 Message: 2206

Hi:

I just came out of a week of heavy software architecture design, and read the news about the Managing Committe meet, etc.

I feel quite sad at the turn of events - entirely avoidable from the start, perhaps.

Since I very rarely come to Mumbai, I cannot get involved with MARS activities in person. The last time I tested the waters to guage the mood of the community with respect to controversial communication, I came away with a better understanding of MARS and Martians.

The way I look at it, most such tech hobby groups are a mix of people with different interests and philosophies. You have people like SWS who advocate restraint and laissez faire behaviour, and folks like myself who come in influenced by our worlds.

A number of techies such as myself are of the opinion that it is the community (any community) that should police itself, and urge its members to behave and set an example for others. The reasons ? The fear of loss of freedom. Of people being able to point a finger at us now and ever after. Of not belonging to a group that upholds certain standards of behaviour (standards which undergo change every now and then). A good number of us are leaders in our own communities.

Do we need more HAMs ? Yes, we do. But we should then have to come across as a community that has certain standards, etc. Whatever these standards may be. I believe in and understand that a consensus develops over a period of time.

I speak as a person who had attended the HamFest at Gandhi Nagar. Uptil the HamFest, I'd seen the man forces behind MARS who came to conduct classes, took us on field trips, etc. (Mind you, I'll always remember IZO's dedication at that time). When I saw the next generation of Martians play the fool at the HamFest, I was appalled at no one (Not even NLF) decided to stop some Martians from throwing rubbish at each other, or laughing aloud, or disturbing others around.

Is this what MARS is ? When ever are we going to come up with some policy on decorum ? Is this the image long time Martians would like new comers to have of MARS ?

At the company I work with, barring a colleague and I, the remaining 5 programmers have joined the company within the past year. The two of us now see ourselves playing a stronger role as a mentor, as some one who sets the standards for behaviour and software development and workplace culture. These

are very interesting anthropological issues - the over all mindset and behavioural patterns are influenced by a core group of people. Let these people slip up even a bit, and discipline and respect go out the window.

I believe MARS was founded with some principles in mind. Perhaps it is time for us all to revisit these principles.

We are adults and should be capable of taking our own decisions and are then responsible for the same.

Well, I've decided to ask MARS about the image it wants its members to carry when they travel through out India and the world.

2207. ISRO to expand HAM radio service

Yahoo group: m_a_r_s
Date: 2005-01-14 15:35:43 UTC
From: VU2LOC
Topic: 2207 Message: 2207

NDTV Correspondent

Friday, January 14, 2005 (Cuddalore):

The Indian Space Research Organisation (ISRO) is to launch an exclusive micro-satellite in two to three months for promotion of HAM radio service.

The service had provided vital communication when telephone link was destroyed by deadly tidal waves in Tamil Nadu and Andaman and Nicobar.

"The ISRO, which promotes amateur radio service, is to launch an exclusive microsatellite HAMSAT in two or three months time for promotion of HAM services," said Secretary of Upagraha Amateur Radio Club of ISRO B A Subramany. "There is an active HAM network in the country, but we want the network to expand," he added. (PTI)

Dear All,
It is truly a sad day in the history of MARS.

In my personal opinion i feel that instead of expulsion a suspension to IZO could have been meted out.Maybe a reduction in his participation in MARS events could have also helped. But to expel our fellow HAM might be a little too harsh.

If VU2IES has said that he has not given an interview and only his photograph had been taken and he has also tendered his apology then i guess a here in this case and the rest might again have been too harsh.

I personally request the Managing Committee to reconsider its decision as I am sure that all involved have already learnt their lesson. Let this be the last warning once and for all to all involved and the rest of the members as well.

They are after all our fellow HAMS and by expelling them would just create a little more QRM than there already is. Please reconsider my dear friends and give them another chance.

nilesh rathod <vu2nlf@...> wrote:
It has been resolved by the Managing Commitee that :-

Unauthorized T.V. interviews and press releases were given by Milind Korde - VU2IZO, Santosh Vedante - VU2IES, Sanjay Kadam - VU2KDM, Dr.Anukant Mital - VU2TAL and Ankur Puranik - VU2AXN.

Micky - VU2IZO was clearly given instructions by me (Secretary of
MARS and Head of our ARES Team), NOT to give any press release,
inspite of this warning articles have been publised in Mumbai times
Indian Express and Mumbai Samachar.

During the monthly meeting on 9th January 2005, VU2IZO and VU2IES were asked to make their clarifications, but we did not get any conviencing reply from them for these unauthorised activities.

Santosh Vedante - VU2IES has given us a written apology and has informed us that he has not actually given any press releases, all the press releases were given by micky. only his picture was taken.

VU2TAL, VU2TAL and VU2AXN failed to remain present during the meeting.

In view of these unauthorized activities and consistent Alcohol problem of Micky - VU2IZO the Managing Committee has excercised their rights and have passed the following resolution :-

Mr. Milind Korde - VU2IZO is expelled from the society and his membership stands cancelled with immediate effect.

Mr.Santosh Vedante - VU2IES, Mr. Sanjay Kadam - VU2KDM, Dr.Anukant Mittal - VU2TAL and Mr.Ankur Puranik - VU2AXN are put under temperory suspension for 3 months (i.e. till 31/03/2005), they will not be allowed to participate in activities of our society. All their previlages will all remain suspended for 3 months.

2209. Is the expulsion constitutionally valid?

Yahoo group: m_a_r_s
Date: 2005-01-15 13:23:10 UTC
From: Nirav
Topic: 2209 Message: 2209

Hello Ham friends,

Today we are discussing some unfortunate incidents. I do not, however, oppose or laud the expulsion/suspension due to limited knowledge of all the facts. I only share what I know that some respected organisations may follow world-wide.

FIRST we need to check if the constitution allows such an expulsion/suspension and what is the procedure for the same. If it does not or if it does but the Managing committee did not follow the said procedure then our books are not in order and the expulsion/suspension is constitutionally invalid so the question of reconsidering it, as suggested by someone, does not arise.

On the other hand if there is no procedure layed down by MARS for expulsion, then it (MARS) needs an addition/amendment to its constitution as what would be the procedure to expel/suspend a member.

In such a procedure it is necessary that the 'erring' member be given a fair hearing through an impartial 'hearings committee' nominated for the purpose. Such a committee usually has no member from the 'accusing group' with the hearing being recorded for future reference.

Second, the hearings committee should ascertain that an act inimical to the the name of ham radio has been committed by the accused members which has brought serious public harm to the reputation/name of society and/or the hobby as a whole. (I don't think that this has really happened though someone can correct me if I am wrong).

Third if there is a personality trait (e.g. what NLF calls an 'alcohol problem') then the member can be told by various people who mind OR move and pass a resolution with sufficient majority as required by the constitution that, for example, " All MARS events are non-alcohol, non-smoking events and that MARS does not support the use of tobacco, cigarettes, alcohol, drugs and other forms of substance abuse at its meeting, gatherings and events." and then still if a member flouts that rule, a motion be moved for expulsion after 'n' warnings as documented in the procedure and the matter be passed on the the Hearings Committee appointed for the purpose with both the managing committee and the accused member/s agreeing in writing prior to the hearing(read fair-trial) to abide by the decision meted out by the same.

I tend to agree with Sarla and Sriram on many counts.

Sarla is right, among other things, when she says that we cannot bash a member for one personality trait and again laud him/her for results that may be produced by another of his/her traits. This does not mean that IZO is correct if he reportedly has an 'alcohol problem'. It means we need more

unbiased vision.

Sriram is very correct that self-regulation of a group of people is a must and eventually it happens.

Although NLF may like to implement a decision that he feels will install a code of conduct and decorum, I think a broader base of procedures needs to be layed down. This event can serve as an inspiration to 'plug more holes' in the constitution regarding expulsion.

Humbly yours,
VU2NHR

2210. HEADLESS DECISION

Yahoo group: m_a_r_s
Date: 2005-01-15 15:46:15 UTC
From: Mr Mukesh Jaitley
Topic: 2210 Message: 2210

Hello Fellow Hams ,

Its been long that i interacted with you all by any medium ,such as RADIO,MAIL, OR LETTERS , as i was qrl with my morning qth, but yes i was always updated about the events , through some good ham freinds of mine .

yes i came to know about explusion of vu2 IZO , through mail and also , vu2 izo also called me up, it was sad to learn about it , but there are few points on which i was just pondering over , if any one can throw some light on those i shall be very thankful about it.

A) I am calling this HEADLESS DECISION cause if at all there is any chairman heading MARS, then the explusion letter should have been written by him , rather then secretary , and i do guess thers is A CHAIRMAN , no doubt he was not on DIAS during HAMFEST,I say this cause as per VU2HIT , who resigned as chairman and subsequently VU2RIO was appointed as CHAIRMAN , as per commitees unanimous decision. so right at outset this issue of CHAIRMAN should be soretd out.

Subject: [m_a_r_s] CHAIRMAN ????

Prashant

Please explain "Decision about appointing new Chairman will also be communicated to you very soon"as for my understanding before tendering my resignation as a commitee member on the 13th August '04 Managing Commitee meeting,wherein the first resolution was adopted & passed unanimously to appoint Pankaj Pasad OM VU2RIO as a chairman and thereon other resolution were adopted by your commitee as per your email appointing other office bearers.

Kinldy explain , so why this confusion....

Huzefa Merchant
VU2HIT

B) IF a decision has been taken then was accused party given mandatory 21days notice period in written and awaited the written reply , i presume there are certain rules laid out for all the things to be done under society /trust laws , remember we are REGISTERED TRUST, i just hope some wrong action should not give any one chance to take some LEGAL ACTION.

C) Okay vu2 IZO expelled cause his answer was not convincing enough so LIFE BAN, and vu2 IES given 3 months ban after he apologised in writing, but 2 accused hams VU2 AXN , VU2 TAL , didnt even bothered to attend meeting neither apologised how come they get away with just 3 months ban , guess they are as guilty as VU2 IZO , not that vu2 izo punishment is a simple one its one of the HARSHEST punishment to be given.

Theres lot to write , but lets go step by step , let me get theses answers first.

LETS BE GOOD HAMS -- NOT HAM -- HARRESMENT TO ALL MEMBERS.

2211. RE: [m_a_r_s] Is the expulsion constitutionally valid?

Yahoo group: m_a_r_s
Date: 2005-01-16 08:27:22 UTC
From: vu2nlf
Topic: 2209 Message: 2211

dear Nirav and friends,

All the decisions taken by the Managing Commitee are as per the constitution, The managing commitee has the powers to expel.
please refer to the clause 32 of our bye-laws. (as per the consititutions a 21 day show cause notice is to be given to the member, who is to be expelled from the society, (which ofcourse is a formality)... VU2IZO was given verbal notice and by mail,,,he was present for the meeting held on 9th January 2005, he was asked for clarifications for these unuathorized actions (press releases) and Alcohol problem (consuming Alcohol during society events). Five out of Six managing commitee members were present for the meeting.... The M.C did not get any conviencing reply.. hence the decission of the M.C remained unchanged and as per clause 32 of our bylways he was expelled..

32 BREACH OF BYE-LAWS.

A) Any member who has committed breach of any rules of the society or

who has refused or neglected to abide by any such rules or who has

committed an act which in the opinion of the Managing Committee is

calculated or likely to bring discredit to the society, may be

removed from the membership of the society by a resolution of

the Managing Committee at a special meeting thereof convened for

that purpose with at least twenty-one days notice.

B) No such resolution shall be passed unless the member concerned is

informed by registered letter at least twenty-one days before such

meeting and of the grounds on which it is proposed to remove him

from membership and is given an opportunity to explain his conduct

to the entire Managing Committee in writing or in person at such

meeting. The decision of the Managing Committee shall be final.

IZO and all others suspended are my friends and there are no personal grudges... The Managing Commitee has considered everything before taking the decision..

All the funds collected by VU2CFO & VU2IZO for Hamfest is greatly appreciated..no doubt..but that does not mean that it gives IZO the right to

do whatever it pleases him,,

If you guys need further clarifications please come for meetings...I cannot keep on giving you guys clarifications on the E-Group. get yourself involved in the society activies, understand our position, please don't make unnecessary QRM, I know what is right and what is wrong, what is good for our society and what is not....

Stop being arm chair rambos... come forward and start doing something for our society... because till you are not involved you will never have the complete picture, stop judging the action of the Managing Commitee... firstly nobody wants to take responsibility, nobody wants to come on Managing Commitee... the Chair of the Chairman of the Managing Commitee is empty, since VU2HIT resigned... I requested HIT not to resign, (as I told him, I will be taking over as secretary from Mehul, and I will share all the work load with him) , but he resigned under work pressure.. I practically begged to VU2UGJ & VU2ZRS to take up the chairmanship.. but both of them refused... VU2RIO was never given the chairmanship, (You may check the Minutes Book), and he is never around anyway, we don't what a dummy chairman do we ?

last year on completion of my term as the secretary, I decided not to run for office, letting other members take charge and run the society.. I had to practically beg to get 7 members for the M.C.. there were no elections mind you... all the M.C members were given the office by default. ... then VU2ICQ goes away to 9V1 land... and VU2HIT resigns.... looking at the state of our Managing Commitee and our society.. I once again took charge ... as nobody else would....

It is a very sorry state of affairs... nobody wants to take responsibilities.. just comment and question the M.C., well the present M.C is doing whatever is best to their capabilities, Judgement and Knowledge... if you don't agree or ...if you don't like it,, too bad... don't vote for us next time... or rather run for office take charge and throw us out....

I once again request all members to co-operate, help and support the M.C to run the society...

73
Nilesh - VU2NLF
Secretary..

Hi NLF,

Have planned my trip to India to include the simulation exercise. You can
count me in the exercise - even if i m not present on 23rd meeting.

Thanks,

Mehul

Dear NLF and other TOP BRASS OF THE MARS

I was out of station and today I could read the mail about the actions taken against the defaulters.
It was very sad IN MAIL in my life.

Since begining I was writing about the MARS. A disciplined/well organised/Efficeint/(Defence Type).
I apprecite discipline of the MARS.

BUT I WOULD BEG THE TOP BRASS OF THE MARS...
THEY COULD BE REPRIMANDED AND ACTION TAKEN BE RECONSIDED.
PSE CONSIDER THIS REQUEST. AGAIN... AGAIN.
THEY SHOULD BE WARNED. and see this do not happen in future.
CAN THEY BE IN AGAIN ??????????

I hope this might touch the bottom of heart of the TOPS.

During the time of this event.. VU4 was a special case. All were only involved in this special communication. BUT May BE WITH JOSH(a hindi word) this could have happened.

IT is up to the TOP BRASS of MARS to reconsider.

Basappa

nilesh rathod <vu2nlf@...> wrote:
It has been resolved by the Managing Commitee that :-

Unauthorized T.V. interviews and press releases were given by Milind Korde - VU2IZO, Santosh Vedante - VU2IES, Sanjay Kadam - VU2KDM, Dr.Anukant Mital - VU2TAL and Ankur Puranik - VU2AXN.

Micky - VU2IZO was clearly given instructions by me (Secretary of MARS and Head of our ARES Team), NOT to give any press release, inspite of this warning articles have been publised in Mumbai times Indian Express and Mumbai Samachar.

During the monthly meeting on 9th January 2005, VU2IZO and VU2IES were asked to make their clarifications, but we did not get any conviencing reply from them for these unauthorised activities.

Santosh Vedante - VU2IES has given us a written apology and has informed us that he has not actually given any press releases, all the press releases were given by micky. only his picture was taken.

VU2TAL, VU2TAL and VU2AXN failed to remain present during the meeting.

In view of these unauthorized activities and consistent Alcohol problem of Micky - VU2IZO the Managing Committee has excercised their rights and have passed the following resolution :-

Mr. Milind Korde - VU2IZO is expelled from the society and his membership stands cancelled with immediate effect.

Mr.Santosh Vedante - VU2IES, Mr. Sanjay Kadam - VU2KDM, Dr.Anukant Mittal - VU2TAL and Mr.Ankur Puranik - VU2AXN are put under temperory suspension for 3 months (i.e. till 31/03/2005), they will not be allowed to participate in activities of our society. All their previlages will all remain suspended for 3 months.

Linux Apps Automate Your Shack

By Stan Horzepa
QST
01/16/05 5:00 AM PT

Hamlib allows authors of software such as logging programs, digital communications programs, or those wanting to develop the ultimate radio control software to concentrate on the user interface and the basic function of the program rather than radio control.

Last March, I went on about Linux as an operating system to consider for your amateur radio computer. In response, an enthusiastic Linux user, Mike Markowski, AB3AP, suggested that I check out what he calls "a really great trio of Linux software: Hamlib, Xlog and gMFSK." So I did check them out and will pass along some information about the trio.

The Ham Radio Control Libraries, Hamlib for short, is a software development effort to provide a consistent interface for programmers wanting to incorporate radio control in their amateur radio programs. Hamlib is not a complete application; rather, it is a software layer intended to make controlling various radios and other amateur radio hardware much easier.

Logging Tools
Hamlib allows authors of software such as logging programs, digital communications programs, or those wanting to develop the ultimate radio control software to concentrate on the user interface and the basic function of the program rather than radio control.

That came from the Hamlib Web site. Go there to learn more about Hamlib and to download it and other Linux applications including all the ones described in this month's column.

Mike says that applications can use the Hamlib libraries "to integrate rig/rotor control with software." For example, Xlog is "a logging program that uses Hamlib. When starting a QSO, with Hamlib talking to the rig, log fields can be automatically filled in for you: frequency, mode, power, etc., i.e., whatever your rig interface supports."

Ham-Like System
Xlog is a Linux logging program that uses Hamlib to retrieve power, frequency, mode and signal strength while logging, loop Stakenborg, PG4I and Stephane Fillod, F8CFE, developed the program. The Hamlib Web site has this to say about Xlog:

"Xlog displays a log with the most recent contacts added to the top. You can add, delete, and edit log entries. The log is saved into a text file. You can open, close and create logs, as you need them. Xlog supports the following logging formats: Cabrillo, ADIF (Amateur Data Interchange Format), TRlog (format also used by TLF), and EDI (ARRL VHF/UHF contest format), and can import TWLog and Editest files."

Finally, there is gMFSK, which Mike calls "a fantastic program" that interfaces with Xlog and Hamlib. After QSO, information is added to the gMFSK logging boxes, and clicking the LOG ENTRY button pops the information into Xlog.

Again, from the Hamlib Web site: gMFSK is a multimode HF terminal program for Linux developed by Tomi Manninen, OH2BNS, and despite its name, gMFSK can send and receive many digital conversational modes typically used by radio amateurs on HF including MFSK (MFSK16 and MFSK8), RTTY, THROB (1, 2, and 4 throbs/sec), PSK31 (BPSK and QPSK), PSK63, MT63, and Feldhell. gMFSK uses the computer sound card to interface to an SSB capable transceiver. All digital signal processing is done in the main CPU so any sound card supported by the operating system should work.

Once more from Mike: "It's well known in Linux ham circles, but doesn't seem to be generally known. Linux is so ham-like with all the tinkering you can do, that I'm surprised it's not the ham operating system of choice."

2219. RE: [m_a_r_s] Reconsider what ???

Yahoo group: m_a_r_s
Date: 2005-01-18 09:03:51 UTC
From: vu2nlf
Topic: 2203 Message: 2219

Dear NXM and fellow concerned members,

Once again I repeat that we appreciate your concern about the expelled member and members under suspension..

Do you really think that we get sadistic pleasure out of taking these kind of decisions ? Do you really think we don't care ? they all are our friends... we don't like it as well, but things have to be put to order... we cannot run the society with loose cannons like VU2IZO...

Many members have expressed their concern... but the question is.. do these expelled and suspended members care ? are they willing to admit that did something wrong ? No one expect for VU2IES have accepted their mistake.. in fact VU2IES has given a written apology to that effect...

VU2IZO.. has not admitted his mistake... on the contrary he is convinced that he has done the right thing... during the Sunday meeting he even denied that he has given the press release in "Mumbai Samachar"...and said that they (Mumbai Samachar) have copied the article from other newspaper...

funny thing is in "Mumbai Samachar" it says... {{ when S21RB, from Bangadesh came for Hamfest... he immediately asked who and where is VU2IZO ?... he came to me (VU2IZO) and gave me (VU2IZO) a big hug }} .... now frankly I don't know how true this is.. and weather VU2IZO knew S21RB, before the hamfest or not.... but the fact is this news have NEVER appeared in any news paper article... so how was it copied by "Mumbai Samachar"...??

In past we have (particularly me) have had a lot of difference of opinion ...many things our members have done, which I felt was wrong...but nothing serious... but we have never in past exercised our rights of M.C and expelled or suspended anyone... if I do that I would be wrong... I would be misusing my power vested in me....

At times there is so much QRM on our group... I am tempted to remove these members from our E -Group... but I have never done that... if I do I would be doing a wrong thing... MARS is a democratic society, all members have rights to express their opinion... but the M.C makes the final decisions..

These decisions taken by the M.C are without prejudice and after a lot of considerations....only looking in the interest of the society... so please respect the decisions taken by the M.C and bear with us

I hope we can stop this issue here... we have enough talks about it....I have tried my best to answer all queries by you guys.. let us close this topic now please..

Topic: 2222 Message: 2222

Mission and duty go ham in hand

HYDERABAD: They are expected to rush to disaster sites, okay.

But when a bunch of Ham radio operators from Hyderabad arrived in the Andamans early December, squaring up to a natural calamity was something they were not expecting, least of all a tsunami.

Excited, the team - the second Ham expedition to the archipelago in 17 years - was on a different mission altogether, making the most of a Supreme Court ban-lift on Ham activities there. Then the tsunami happened, putting them right in the thick of devastation. They were the first to establish links with the mainland from the sea wrecked islands.

Back in the city, the expeditionists from the National Institute of Amateur Radio (NIAR) shared their experiences with The Times of India.

"After the tsunami, Ham operators from several countries contacted us for information on people visiting the Andamans then," said S Ram Mohan, additional director, NIAR.

Ram Mohan himself had to scurry to safety in Port Blair as giant waves crashed into the island. Duty calling, he left for worst-hit Car Nicobar to help local authorities in relief efforts.

The other team members, including NIAR assistant director Jose Jacob, computer incharge R Sharat Babu and team leader Bharti Prasad, coordinated with officials in relief efforts in Port Blair and other places.

But before the tsunami hit, the team had already accomplished 'DXpedition', the mission for which were in the islands.

In Ham parlance, 'D' stands for making contact (with operators across the world) and 'X' means the unknown. Andamans were the 'unknown and inaccessible' for Ham radio contact.

"Our Hams established contact with 30,000 operators from practically every country in the globe," NIAR director S Suri said.

Ham operator R Sharat Babu in Port Blair after the tsunami hit the place.

Dear All

Thanx for wishing me .. infact i had forgot my birthday as usual...my XYL wished me in the early morning so i remember... I really appreciate with my deep heart the cuddly & soft feeling which ZRS and i understand other members do have for me... I also thanx ZRS for making me know that I m 110kg (sorry boss u missed out I am 109Kg), but yes i do definetly know that "full of joy and laughter and lots of hard work coming from me" does not only implies to me especially after the chabuk, everyone's has been the same.

2236. Disaster Management Excercise (27th Jan-30th Jan)

Yahoo group: m_a_r_s
Date: 2005-02-01 10:20:32 UTC
From: Labhesh More
Topic: 2236 Message: 2236

Hi Mars,

Just returning from the MARS organized ARES- Disaster management exercise for Old as well as new hams, I would like to state it was a happening experience.

Guided by Veterans like VU2NLF, VU2CBU there were relatively new hams like VU2SFN (Shailesh Pradhan), VU2EGO (Labhesh More), VU2DCE (Darshan Himani), VU2YOT (Yogesh Thakkar) & VU2AXC (Anurag Chugh). Also accompanying us were enthusiastic SWL's Nilesh Dixit and Nandini Gangal.

We started of by local train to Asangaon Station around 10.30 pm on 27th Jan. We then traveled to the farmhouse belonging to one of our senior hams VU2MOO (Milind Mokashi). Comforting ourselves to the chilled night we were briefed of our exercises by Vu2nlf. The next morning we raised the HF Dipole antenna for 7,14, 21 Mhz. We then operated successfully on FT-747 belonging to NLF. We were then taught all the basics pertaining Disaster Operations. This crash course definitely cleared our doubts and queries regarding the technical aspects of Ham Radio.

On 29th Jan we were taught the functions and operations of various Rigs and Handies. Young Amateurs like Me, AXC, YOT had our first hand experience on the PTT and were Jubilant to make QSO's. SWL's Nilesh and Nandini were eager too and got to do their modulation tests. We also were divided in teams to setup dipole antennas. In the eve, we had a mock drill on how to communicate during Disasters and Otherwise.

On 30th Jan we gave a test pertaining Disaster management and believe me it was a tough one. We also did help VU2MOO to fulfill his long impending desire of getting VHF operational from his farmhouse. We set up an almost 35 feet high yagi and tested it using the IC-2100 won by Nilesh Dixit in Ham fest. We did learn a lot more of Digital Communication and its softwares.

Apart from the technical aspects of Disaster, other important aspects particularly cooking food was also taught to us. We realized the importance of having good wood and utilizing it in a very resourceful way. We really did cook wonderful meal with minimum resources carried/available to us. Some delicious flavors lingering on the mouth were Lemon Tea on the last day, Grass Tea, Baigan ki Khichadi, Alu mutter with bread and rice. Hmmmmm.

Also did we realize the importance of humor in stress related situations and of course we had VU2DCE to lend us rib-tickling laughter?s with situational comedy.

All in all this was one of the adventurous, informative and hands on experience. More participation in such events will definitely help us realize the purpose of our being Amateur Radio Operators.

73s De

VU2EGO (Labhesh More)

09822524221 / 25415529
PS: the only thing really disastrous on this trip was boarding the train to Asangaon. For those who travel train, we boarded the 9:31 (from Thane) Local to 'Kasara'. Phew I almost got my sack tore.

Ham radio to the rescue

Amateurs train to help in crisis, set up local station in 1.5 hours.
Sayli Udas

Mumbai, January 30: NINE eager members of the Mumbai Amateur Radio Society's (MARS) Amateur Radio Emergency Team invaded Kavadas village near Asangaon in Thane on Saturday, all set to assist in a 'disaster'.

They were armed with a battery, transmitter and receiver, laptop, screwdrivers, wires and tape. Their task: To make an antenna using just wire and then set up a local radio station.

Advertisement
For six of them, this was their first such endeavour. ''There will be two more through the year, one planned and one unplanned,'' said team head Nilesh Rathod (38), an oil exporter and part of the Gujarat earthquake disaster team.

The group is part of MARS's attempts to extend ham operating beyond a hobby and into disaster management.

''Recent disasters like the tsunami of December 26 and this week's stampede at Wai have made disaster management essential. And communication links are often the first to be destroyed. This is where we can play a major role,'' said Darshan Hemnani (27), one of the trainees.

So how successful was the group? Well, 90 minutes after they began, the ham operators were communicating with other operators in Mumbai. In an actual disaster, quite a Godsend.

Another exercise the team is planning is using the laptop as a medium of communication in times of disaster.

The sound card would then form the communication modem, and connected to the transmitter, it would send text messages and photographs.

''We could then transmit pictures of the affected areas and, in case the sound is not clear, type messages for better communication,'' said Prashant Koli (44), a HAM operator since 2000.

Hi,

greetings to all hams.

first of all i would like to Congratulate you all, for
the great success of hamfest india 2004
(a bit late though).

secondly a raffle draw was arranged somewhere in
nov/dec 2004 , where the life members of MARS had a
privilege to buy raffle tickets of rs.1000 each & win
radio's.

It was mentioned that receipts for the same will be
issued whereby we can use them for tax exempt. well i
had bought couple of them. now there's no updates wrt
receipts of raffle draw held in december 2004. can the
concerned people look into the matter and issue
receipts asap.

finally, we the new callsign holders and life members
of MARS are still awaiting for our permanent id card
(with callsign) & call sign caps. can any one update
on this too.

Dear Shantanu, Abhay and friends,

I really appreciate your efforts for making use of our 70CM band. nevertheless I personally feel dual band antenna is not a good idea... it will always be a compromise, it will not do justice to either band

Instead I suggest ask GT to make a 5/8 for 70CM, infact I have homebrewed a slim-jim for 70CM and the preformance is out of this world... the slim-jim will cost you less then Rs.100/- and you can make it in about 2-3 hours.

Then again, I am against dualband antenna,Rigs & people, but thats my opinion... many may not agree...

2262. How to Keep Having Fun During the Declining Solar Cycle

From: VU2LOC
Topic: 2262 Message: 2262

How to Keep Having Fun During the Declining Solar Cycle

By Rod Vlach, NN0TT
February 4, 2005

Ten ways to enjoy your favorite pastime until the sunspots come back.

The resourceful Amateur Radio operator can continue to enjoy ham radio, both on and off the air, even though solar activity is on the downswing. It looks as though the current solar cycle will reach its approximate low point (least number of sunspots) sometime next year, so we may as well dig in our heels and make the best of things. Here are 10 ideas on how to cope with less than ideal operating conditions:

1) Stay on the Air!

Although the upper high frequency bands (10, 15 and 20 meters) are a lot less productive than during peak solar conditions, it gives us an opportunity to become better acquainted with the lower bands. I have never operated throughout an entire "bottomed out" cycle, and in some strange way (and being there is nothing I can do to prevent it) I am "sort of" looking forward to how well I can do with my 100 watts and vertical antenna. It's also a good time to ragchew! If your signals aren't always getting across the ocean, there are lots of in-country QSOs to be had!

2) Learn Why and How Solar Activity Affects Communications

It is rather amazing that the quality of our earthly radio communications is determined by an object that is 93 million miles away--the sun. And the greater number of sunspots there are, the more the ionosphere is "ionized," causing HF radio signals to "refract" (skip) back to earth, making global communications possible. The maximum/minimum number of sunspots occurs in a repeating 11 year cycle.

All the solar propagation terms can be confusing, even intimidating. I have been able to ascertain that if the "solar flux" is up and the "K index" is down, it is good for radio communications. Although there will be occasional upward spikes, the solar flux and number of sunspots will continue heading downward for a while yet. A current solar chart resembles a "very bumpy" downhill road. Two good chart sites, the Solar Terrestrial Activity Report and WM7D's Solar Resource Page are available on the Web. K9LA has a good article on defining the solar terms.

3) Submit an Article to QST or the ARRLWeb

Have you ever wondered how adept you might be with a pen and paper (or keyboard and word processor) to spin out an article for QST or the ARRLWeb? You'll never know unless you give it a try! It's not as difficult as you might think. In fact, one of my past ARRLWeb pieces was on that very subject--how to write an article.

The author doesn't let less than ideal solar conditions interfere with the pursuit of the fun Amateur Radio has to offer.

4) Design a New QSL Card

Whether you consult with a QSL printer or have the facilities to design and print your own, now would be a great time to create a card that will knock everybody's socks off! I recently designed my first "photo" QSL card, with a picture I took myself at a Minnesota nature park, and had it printed by professionals. I also had a lot of input into the design of the back of the card. Whatever style you choose, creating a QSL "mostly from scratch" was a fun experience for me. The Basics of a QSL Card is another past article of mine that you can refer to.

5) Meet Some New Hams; Form a Club

It's a lot more fun to complain about poor band conditions in a group than all by yourself! Check into a local club or if there is none, consider starting one of your own. This can be anything from having a pizza together once a month to having a full-blown club station. Check with ARRL for any affiliated clubs in your area. I have also had a lot of fun discussing DX and "other stuff" with e-mail buddies, most of whom I have never met personally!

6) Try a New Mode or Activity

Compared to the mid 1960s when I got my first amateur license, there is a plethora of modes and activities to choose from today. Some may be cost/location prohibitive for many of us (such as an EME, or "moonbounce" station) but in addition to the old standbys of phone and CW, there is PSK 31, radioteletype, amateur television, satellite, FM and others. And, although it is not a "mode," don't forget QRP (low power). Modern rigs will allow the output power to be lowered to 5 watts or less, enabling the operator to go QRP whenever the urge strikes! Lots of QRP info is available from Anthony Luscre's series of Web articles. One good one is called Shopping for QRP items and Supplies. You can find others by searching for Luscre at the ARRLWeb home page.

7) Collect More QSL Cards

My ongoing project is attempting to get a photo QSL from all the DXCC entities I have worked, for my QSL album. I am active in the ARRL Outgoing QSL Service, and my feature on using it can be found on the ARRLWeb site. Now that DX contacts are less frequent, I am QSLing more to entities I already have confirmed, because incoming cards are

always fun to receive, and each one is unique. It helps "fill the gap" between on-air DX QSOs.

8) Experiment with a Different Antenna

I stay with a vertical antenna mainly for its small footprint and ease of operation, but if you have the time, finances and space, trying out a different antenna design could prove beneficial. You could even design one of your own and test it out! Do you have a situation that is keeping you from "getting out" as well as you would like? See if you can improve it! Need some help? The ARRL has many antenna books; check out the online store.

9) Upgrade your License; Go Vanity (if you wish...)

Some may say that upgrading your ham license has never been easier; to some extent, this is true. Exams are overseen by volunteers, in many convenient locations (with a more cordial atmosphere than many of us old-timers remember who have taken exams at an FCC field office). Morse code requirements have been lessened considerably (or eliminated entirely, depending on the license grade). In the old days, hams taking an exam for the first time had no idea what the actual exam questions would be, as compared to today's "question pool" examples. Although seeing the questions beforehand provides an advantage, the question pool is so large that hams still have to accumulate a considerable amount of information to pass an exam. What better time to prepare to get more operating privileges, and be ready to go when the better propagation returns! ARRL study guides for all the current license grades are available.

If "going vanity" (applying for a specific call sign) has been in the back of your mind for a long time, at least investigate the possibilities. Information on how to get started is readily available. If you have a problem with "giving up" your old call sign of many years, my past feature on the "psychology" of applying for a vanity call sign may help.

The self-designed QSL card (see Tip #4) is both attractive and fun to create.

10) Brush-Up On CW

Anyone who thinks Morse code is an outdated mode hasn't heard a CW DX pileup lately. Many hams operate CW worldwide, and it is still one of the best ways to "work the world" with low power. With the declining propagation, you may find CW will get through where some other modes won't. ARRL headquarters station W1AW faithfully broadcasts Morse practice sessions and Code Proficiency qualifying runs. It takes one minute of solid copy to get a nice certificate at various speeds. You don't even need to be a licensed ham to apply for the CP wallpaper! Code practice is available on the Web, too!

We hams may not be spending as much time sitting in front of the radio as we did during the last solar peak, but that doesn't mean there isn't ham-related activity off the air as well. These items are just a few of the things we can do until those peak conditions roll around again. Keep having fun!

ARRL member Rod Vlach, NN0TT, and his wife Diane hail from Willmar, Minnesota. Rod enjoys DXing, ragchewing and writing articles about ham radio. He and his wife are property managers. He can be contacted at nn0tt@....

2266. Wireless communications in Industrial Automation

Yahoo group: m_a_r_s
Date: 2005-02-14 02:39:42 UTC
From: Sriram N
Topic: 2266 Message: 2266

Hi all:

This is slightly off topic, but since it's related to wireless, I decided to write in anyways.

I returned from two troubleshooting campaigns to some steel plats where we'd faced technical problems. I finally diagnosed these are related to problems with network cabling (Industrial networks have a different higher grade cable and protocol called Profibus). I contacted Siemens' who informed me that they now have wireless offerings. These are WiFi devices that operate in the 2Ghz and 5Ghz ranges. Siemens' is not certain if communication over the 5Ghz band is permitted in India.

For those who don't know: Manufacturing lines sometimes have high EMI due to the large motors and drives that are installed. Typically, these motors are drives by Drives that are rated for 200A/440V. The motors give off high EMI.

My questions:
1. Does any one have experience with communicating over radio in and around manufacturing units that have high EMI ?

2. Where do I find if the 5Ghz band is permitted in India ?

From: Sriram N
Topic: 2269 Message: 2269

Hi:

I still have the useful CD-ROMs compiled during 2003. Are there plans for any new compilation ? I'm looking for the following content:
1. Morse tutors
2. Electronics Tutors
3. Antenna how-tos
4. Radio equipment selection guides.
5. List of recommended books and links.

I realise that I could get all this off the net, but just wished to ask more experienced persons first.

FYI, I have the paperback version of the book: The Art of Electronics. This makes excellent reading.

2270. Ham Jokes

Yahoo group: m_a_r_s
Date: 2005-02-15 12:56:38 UTC
From: Nirav
Topic: 2270 Message: 2270

YOU MIGHT BE A HAM IF.....
1. YOUR WIFE SAID "LETS GO SEE AUNT ANNA AND YOU THOUGHT SHE SAID ANTENNA!
2. YOUR WIFE SAID "COULD YOU CUT THE GRASS?" AND YOU THOUGHT SHE SAID
POUND
THE BRASS!
3. YOUR WIFE SAID "WE'VE BEEN INVITED TO BREAKFAST AND YOU THOUGHT SHE
SAID
HAM FEST!
4. YOUR WIFE SAID "SOMETHING IS WRONG WITH THE CHECK BOOK AND YOU
THOUGHT
SHE SAID LOG BOOK!
5. YOUR WIFE SAID "IS MY SEAM STRAIGHT? AND YOU THOUGHT SHE SAID, " IS MY
BEAM
STRAIGHT?'

A HAM NAMED ELMER LIVED WITH HIS XYL NAMED SUE.
WHILE AT THE QTH ONE NIGHT, SUE SUDDENLY WENT QRT. (DIED).
ELMER PICKED UP THE PHONE, AND CALLED 911 AND REPORTED THAT HIS WIFE HAD
JUST DIED AND COULD SOMEONE COME OVER TO PICK HER UP. THE OPERATOR ASKED FOR
HIS ADDRESS AND ELMER SAID HE LIVED ON THE END OF EUCALYPTUS LANE...SHE
ASKED HIM TO SPELL THAT.
THERE WAS A LONG PAUSE ON THE END OF THE LINE AND THEN ELMER SAID.
"HOW ABOUT I JUST DRAG HER OVER TO OAK STREET AND YOU MEET ME THERE"!!

HEARD ON 2O METERS
"Yesterday, my XYL said she'd leave me if I didn't give up ham radio.
Over."

Two elderly hams had been friends for many decades.
Over the years they had shared all kinds of activities
and adventures on the ham bands. Lately, their activities have been
limited to meeting a few times a week to play cards.
One day they were playing cards when one looked at the
other and said, "Now don't get mad at me.....I know
we've been friends for a long time.....but I just
can't think of your name and your call.! I've thought and thought,
but I can't remember them. Please tell me what they are."
His friend glared at him. For at least three minutes
he just stared and glared at the gray haired old man.. Finally he said,
"How soon do you need to know?

An elderly ham and his XYL were on a cruise and it was really
stormy. They were standing on the back of the boat
watching the moon, when a wave came up and washed the
old woman overboard. They searched for days and
couldn't find her, so the captain sent the old ham back

to shore with the promise that he would notify him as
soon as they found something. Three weeks went by and
finally the old man got a fax from the boat. It read:

"Sir, sorry to inform you, we found your wife dead at
the bottom of the ocean. We hauled her up to the deck
and attached to her posterior was an oyster and in it was a
pearl worth $50,000 . .please advise"
The old man faxed back: "Send me the pearl and re-bait
the trap!"

Three brothers ages 92, 94, and 96 live in a house together. One night
the 96 year old draws a bath. He puts his foot in and pauses. He yells
down the stairs and says "Was I getting in or out?"

The 94 year old yells back "I don't know. I'll come up and see." He starts
up the stairs and pauses. Then he yells "Was I going up the stairs or
down?"

The 92 year old HAM is sitting in front of his HF rig and listening to his
brothers. He shakes his head picks up the mic and says "I sure hope I never
get that
forgetful." He knocks on wood for good measure. He then yells into the mic,
"I'll come
up and help both of you as soon as I see who's at the door".

Electricity originates inside clouds. There, it forms into lightning, which
is attracted to the Earth by golfers.After entering the ground, the
electricity hardens into coal, which, when dug up by power companies and
burned in big ovens called 'generators,' turns back into electricity...where
it is transformed by TV sets into commercials for beer, which passes through
the consumers and back into the ground, thus completing what is known as a
"circuit".....Dave Barry

Topic: 2277 Message: 2277

Amateur Radio In 2050

(KC8VWM) on February 16, 2005
View comments about this article!

Hams have historically been tinkers. We have developed many of the communication technologies seen in use today.

While many think of amateur radio as a hobby that involves people who tinker with tubes, oscillator coils and transformers; I am left wondering what will happen in the next 40 - 50 years for Amateur Radio.

Will it be "radio" as we know it today or will we evolve into a new communications evolution?

So what may be in the future for ham radio?

For example, will tomorrow's hams communicate long distances by bouncing modulated light waves from the sun using large dish reflectors into the deep fringes of space?

Will we find a way to learn to harness the light and gigawatt power of the sun to achieve this powerful communication network in the future if it should even exist?

Perhaps we may use a form of earth vibration modulation technology using Mother Nature as a new communication medium.

Or, we might find a way to communicate using atoms as the vehicle for communications in the future.

Will we be able to use atoms to send signals by compressing packets somehow into these atoms and then sending them over long distances along a narrow beam of light?

Who knows?

As we evolve into the future of Amateur Radio what do you think we will invent? Will the ARRL have new interplanetary DX entities? How do you envision the typical Radio Amateur in 2050?

Aha, all new ARES members have made Q codes of their own. About time they knew that their innovativeness is not unique. Somebody already has copyright (The Intl. Telecom Union)hehehehe. Read the attachment.

Hi Martians:

I always felt I was something extra ordinary, working in tough environments, under impossible schedules, well, you know how software guys can have inflated ideas about themselves...

Well, read the rest of this mail, and see why I'm left humbled..

-- Sriram
==========
A Must Read for every S/W Guy ...
Vivek Pradhan wasn't a happy man. Even the plush comfort of the First Class
air-conditioned compartment of the Shatabdi Express couldn't cool his frayed
nerves. He was the Project Manager and entitled to air travel. It was not
the prestige he sought, he had tried to reason with the admin guy, it was
the savings in time. A PM had so many things to do!
He opened his case and took out the laptop, determined to put the time to
some good use.

"Are you from the software industry sir," the man beside him was staring
appreciatively at the laptop.
Vivek glanced briefly and mumbled in affirmation, handling the laptop now
with exaggerated care and importance as if it were an expensive car.

"You people have brought so much advancement to the country sir. Today
everything is getting computerized."
'Thanks," smiled Vivek, turning around to give the man a detailed look. He
always found it difficult to resist appreciation. The man was young and
stocky like a sportsman. He looked simple and strangely out of place in that
little lap of luxury like a small town boy in a prep school. He probably was
a Railway sportsman making the most of his free traveling pass.

"You people always amaze me," the man continued, "You sit in an office and
write something on a computer and it does so many big things outside."

Vivek smiled deprecatingly. Naivety demanded reasoning not anger. "It is not
as simple as that my friend. It is not just a question of writing a few
lines. There is a lot of process that goes behind it." For a moment he was
tempted to explain the entire Software Development Lifecycle but restrained
himself to a single statement. "It is complex, very complex."
"It has to be. No wonder you people are so highly paid," came the reply.

This was not turning out as Vivek had thought. A hint of belligerence came
into his so far affable, persuasive tone.

"Everyone just sees the money. No one sees the amount of hard work we have
to put in." "Hard work!" "Indians have such a narrow concept of hard work.
Just because we sit in an air-conditioned office doesn't mean our brows
don't sweat. You exercise the muscle; we exercise the mind and believe me
that is no less taxing."

He had the man where he wanted him and it was time to drive home the point.

"Let me give you an example. Take this train. The entire railway reservation
system is computerized. You can book a train ticket between any two stations
from any of the hundreds of computerized booking centers across the country.
Thousands of transactions accessing a single database at a given time;
concurrency, data integrity, locking, data security. Do you understand the
complexity in designing and coding such a system?"
The man was stuck with amazement, like a child at a planetarium. This was
something big and beyond his imagination.
"You design and code such things."

"I used to," Vivek paused for effect, "But now I am the project manager,"

"Oh!" sighed the man, as if the storm had passed over, "so your life is easy
now."

It was like being told the fire was better than the frying pan. The man had
to be given a feel of the heat.
"Oh come on, does life ever get easy as you go up the ladder.

Responsibility
only brings more work. Design and coding! That is the easier part. Now
I
don't do it, but I am responsible for it and believe me, that is far
more
stressful. My job is to get the work done in time and with the highest
quality. And to tell you about the pressures! There is the customer at
one
end always changing his requirements, the user wanting something else
and
your boss always expecting you to have finished it yesterday."

Vivek paused in his diatribe, his belligerence fading with
self-realization.
What he had said was not merely the outburst of a wronged man, it was
the
truth. And one need not get angry while defending the truth.
"My friend," he concluded triumphantly, "you don't know what it is to
be in
the line of fire."

The man sat back in his chair, his eyes closed as if in realization.
When he
spoke after sometime, it was with a calm certainty that surprised
Vivek.

"I know sir, I know what it is to be in the line of fire," He was
staring
blankly as if no passenger, no train existed, just a vast expanse of
time.

"There were 30 of us when we were ordered to capture Point 4875 in the
cover
of the night. The enemy was firing from the top. There was no knowing
where
the next bullet was going to come from and for whom. In the morning
when we
finally hoisted the tricolor at the top only 4 of us were alive."

"You are a..."

"I am Subedar Sushant Singh from the 13 J&K Rifles on duty at Peak 4875
in
Kargil. They tell me I have completed my term and can opt for a land
assignment. But tell me sir, can one give up duty just because it makes
life
easier. On the dawn of that capture one of my colleagues lay injured in
the
snow, open to enemy fire while we were hiding behind a bunker. It was
my job
to go and fetch that soldier to safety. But my captain refused me
permission

and went ahead himself. He said that the first pledge he had taken as a Gentleman Cadet was to put the safety and welfare of the nation foremost followed by the safety and welfare of the men he commanded. His own personal safety came last, always and every time. He was killed as he shielded that soldier into the bunker. Every morning now as I stand guard I can see him taking all those bullets, which were actually meant for me. I know sir, I know what it is to be in the line of fire."

Vivek looked at him in disbelief not sure of his reply. Abruptly he switched off the laptop. It seemed trivial, even insulting to edit a word document in the presence of a man for whom valor and duty was a daily part of life; a valor and sense of duty which he had so far attributed only to epical heroes.

The train slowed down as it pulled into the station and Subedar Sushant Singh picked up his bags to alight.

"It was nice meeting you sir."

Vivek fumbled with the handshake. This was the hand that had climbed mountains, pressed the trigger and hoisted the tricolor. Suddenly as if by impulse he stood at attention, and his right hand went up in an impromptu salute.

It was the least he felt he could do for the country.

PS: The incident he narrates during the capture of Peak 4875 is a true life incident during the Kargil war. Major Vikram Batra sacrificed his life while trying to save one of the men he commanded, as victory was within sight. For this and his various other acts of bravery he was posthumously awarded the Param Vir Chakra - the nation's highest military award

Hi all:

http://hams.sourceforge.net/ax25/ has some libraries for AX.25 programming.

AX.25 is the protocol used to transfer data over Amateur Radio.

(http://www.networksorcery.com/enp/protocol/ax25.htm)

I'm curious to know : Has any MARS member programmed AX.25 or written a program
to interface the computer with the radio ?

Dear Sriman,
My tears rolled down while reading about Kargil war memories.
The project manager was the luckiest person in this world to shake his hands with the Subhedar who hoisted the tricolour on point 4875.

Off topic but it was great.

Basappa

PS. You young engineers try getting in to defence. You may get less pay but the life is enjoyable. Unforgettable.

Well, I was moved too. In the corporate world, it the the manager who sends his people into battle and risk. In the Army, the opposite seems to be true. It must take quite some courage to go out fearless of death.

> Off topic but it was great.
Thanks.

Hmm... I'm a commerce graduate with pass class grade. I'm not quite sure if the defence would accept a person with my qualifications.

I'm instead doing my bit by teaching programming for free, helping schools install and configure computers, mentoring Engineering students in their software projects, etc.

2286. infermation about 10M band

Yahoo group: m_a_r_s
Date: 2005-02-21 07:48:22 UTC
From: shailesh pradhan
Topic: 2286 Message: 2286

Hi all members

First I would like to thank to VU2NXM for the advice of the 10M antenna.

Friends as you all know that in amateur wire less world power should not be a problem. And if your antenna is perfect then you can work QRP also very easy.

From last few days I was bit confuse that I got a 10M rig and everybody says the 10M band is dead.

Then after lot of R&D and talking to people I could not do any thing on 10M and about to give-up.

Then I had a word with VU2NXM and he advice me for the half square antenna.

And then WOW!!!!!!!!!!!!

I started receiving stations but hard to understand it was because of antenna. I manage to fix the problem and one fine day I manage to contact Saudi Arabia and Brazil.

Believe me working QRP is not a big deal after this experience.

I work these stations on 3W and 2 ? W SSB and got report 5-7 isn?t it gr8.

I really thanks to VU2NXM because of him I could do this QSO.

The information for all of you that the 10M band is not dead.If you have a antenna you can also work. The band opens in the afternoon and night also.

have fun in hamming and enjoy the hobby

Friends as you all know that in amateur wire less world power should not be a problem. And if your antenna is perfect then you can work QRP also very easy.

From last few days I was bit confuse that I got a 10M rig and everybody says the 10M band is dead.

Then after lot of R&D and talking to people I could not do any thing on 10M and about to give-up.

Then I had a word with VU2NXM and he advice me for the half square antenna.

And then WOW!!!!!!!!!!!!

I started receiving stations but hard to understand it was because of antenna. I manage to fix the problem and one fine day I manage to contact Saudi Arabia and Brazil.

Believe me working QRP is not a big deal after this experience.

I work these stations on 3W and 2 ? W SSB and got report 5-7 isn?t it gr8.

I really thanks to VU2NXM because of him I could do this QSO.

The information for all of you that the 10M band is not dead.If you have a antenna you can also work. The band opens in the afternoon and night also.

have fun in hamming and enjoy the hobby

2291. Ham radio, rescue link in disaster

Yahoo group: m_a_r_s
Date: 2005-02-23 05:21:42 UTC
From: VU2LOC
Topic: 2291 Message: 2291

Ham radio, rescue link in disaster

Hours after the super cyclone struck Orissa and minutes after the tsunami ravaged Andaman islands, almost all the communication systems had failed. At that critical moment, an amateur radio brought to fore the magnitude of the disasters and helped mobilize relief operations.

In fact, this alternative mode of communication tool, known as the Ham radio, has worked wonders in disaster zones. Even the Central Government, impressed by its effectiveness, is laying emphasis on engaging Ham radio operators in areas frequented by natural calamities. Hyderabad-based National Institute of Amateur Radio (NIAR) is playing a pivotal role in achieving this objective of the Centre. It has taken up the task of training operators and popularizing the utility of these radios.

Additional Director of NIAR S.B. Ram claimed that his team was the first to reach the State during the super cyclone. "We had set up around 15 sets in the worst affected areas for dissemination of information. In fact, we had even installed a set in the Chief Minister's residence," he said at a review meeting of the training programme in the State here on Monday. Giving credit to the communication tool, Ram said in Andaman also the radio enabled the NIAR team to handle relief messages of the government and transmit hundreds of welfare messages of the victims to their near ones.

Talking about the training programme, Ram said funded by the Union Ministry of Communication and Information Technology, it is going on at ten different centres set up across the country including Bhubaneswar and Puri. The meeting was attended by Chairman and Director of NIAR S.S. Suri, managing director of Orissa State Disaster Mitigation Authority (OSDMA) N. Sanyal and Group Coordinator of Department of Information Technology R.K. Arora.

The programme, which started in April 2004, is scheduled for completion in March. Already, thousands of operators have been trained across the country with 225 from the State itself. However, Ram said the target is to train around 1 lakh operators. Deputy General Manager of OSDMA G.R. Das said while a handful of amateur radios are operating in the State, the OSDMA would be providing another 20 sets shortly to licensed operators, who have completed the training programme. A set was also donated by NIAR on the occasion. The price of the radio ranges between Rs. 20000 and Rs. 1 lakh.

Hi all
The photo of half square antenna for 10M band

From 3-2-1 is a single wire and 3-4 is a single wire

The distance of 3-2 is 17 1/2 " and then bend the wire

The distance from 2-1 is near about 9"

The distance from 3-4 is near about 9"

connect the wire 3-2-1 to the center of the fiddler line
connect the wire 3-4 to the outer core of the fiddler line

best of luck and happy hamming 73's
vu2sfn / shailesh

Make your HOTMAIL 250MB!!!

Those of you having hotmail accounts, can increase their 2MB capacity
to 250MB! for FREE.

Logon to your hotmail account
Go to "options"
Go to "Personal" Click "My Profile"
Change Country to "United States"
Wait for browser to load United States settings.
Change the state to any American State with its ZIP code.
(
For example "
Florida
" and zip code "33332")
Click "update"
Click "Continue"
Go to "Language" and make sure its "English"
Click "OK"

After this, Paste this link in the same browser.
http://by17fd.bay17.hotmail.msn.com/cgi-bin/Accountclose

This will ask you if you want to close your hotmail account. Do not worry.
This is only a temporary deactivation. All your Messages and Contact
details
will still be intact.

Click "Close My Account"

Go back to login page and re-logon to your hotmail account.
Click "Activate my Account" and follow instructions on the screen.

Your account size will now increase to 25 MB, which a month later becomes
250MB.

From: VU2LOC
Topic: 2300 Message: 2300

International Space Station Reference

Ham Radio

When astronauts, cosmonauts and mission specialists from many nations fly on the International Space Station, they will have amateur, or ham, radio as a constant companion.

Since its first flight in 1983, ham radio has flown on more than two-dozen space shuttle missions. Dozens of astronauts have used the Space Shuttle Amateur Radio Experiment, or SAREX, to talk to thousands of kids in school and to their families on Earth while they were in orbit. They have pioneered space radio experimentation, including television and text messaging as well as voice communication. The Russians have had a similar program for the cosmonauts aboard the Russian Space Station Mir. When U.S. astronauts were aboard Mir in preparation for the long duration missions of the International Space Station, they used amateur radio for communication, including emergency messaging while Mir was in distress.

As human space flight moves into a new uncharted era, an organization called ARISS, which stands for Amateur Radio on International Space Station, has been formed to design, build and operate equipment. In 1996, delegates from major national radio organizations and from AMSAT, which stands for the Radio Amateur Satellite Corporation, in eight nations involved with the International Space Station signed a Memorandum of Understanding to form ARISS.

NASA and the Russian space organization Energia have signed agreements that spell out the place of amateur radio on the station. A technical team, called ISS Ham, has been officially established to serve as the interface to support hardware development, crew training and on-orbit operations.

In the United States, the American Radio Relay League, which is also known as ARRL, and AMSAT provide leadership and consultation. They also donate and build hardware as well as making sure safety and qualification tests are successfully completed so the equipment can fly. The Russians have provided ports so that antennas can be mounted on the station's Zvezda Service Module -- the space station unit that provides living quarters for the astronauts and cosmonauts. United States and Russian teams have trained the astronauts and cosmonauts to operate the equipment. The Italian team has designed and built antennas. The German team has built sophisticated repeater stations that will allow crews to make recorded reports on their daily activities and permit hams on Earth better contacts with men and women

aboard the station.

IThe initial space station operations will be mostly voice and packet, a text messaging device. The first initial radio station was flown onboard the Space Shuttle Atlantis on STS-106. The crew transferred the ham radio gear into the space station for future use by the Expedition One crew.

More than 40 missions over five years will be required to assemble the International Space Station in orbit. The astronauts and cosmonauts will work hard on these missions, but they plan to take some time off for educational outreach contacts with schools. NASA's Division of Education is a major supporter of the amateur radio activity.

The sponsoring agencies have stated that they consider access to a ham radio system a requirement for psychological support of the crews, by providing family and general contacts for people who will be in space many weeks at a time.

As the International Space Station takes its place in the heavens, the amateur radio community is prepared to do its part by helping to enrich the experience of those visiting and living on the station.

Frequencies
Worldwide downlink for voice and packet = 145.80
Worldwide packet uplink = 145.99
Region 1 voice uplink = 145.20
Region 2 and 3 voice uplink = 144.49
Worldwide uplink for cross band voice repeater = 437.80

Dear All,

Indeed Foxhunt 2005 was a great success.

Innovative thinking and successful planning and
successful execution of the plan by the foxhunt
organizers, made this foxhunt a gr8 success and an
enjoyable and learning experience for all of us.

I also appreciate VU2ZRS' efforts to collect feedback
from all of us while returning back to Mumbai.

Cheers,

Sent: Friday, March 04, 2005 10:16 AM
Subject: [CQ_VU] Re: Zero duty Notification URL

Hi Karan, VU3GTF
I could locate the following URL regarding the 'zero-duty' notification (issued on March 1, 2005). This would be of use to us:
http://indiabudget.nic.in/ub2005-06/cen/cus2405.pdf

Our ham items fall under the item no.8525 20 (at Serial no. 3 of the table) The HS (Harmonized System) Code for Amateur Radio items is 8525 20 04.

'Import Permit'
The 'Import Permit' is infact issued by DGFT (Director General of Foreign Trade). What the WPC issues is a 'Import Certificate', 'Certifying' that the item to be imported is an 'Amateur Radio Equipment/Accessories.

This certificate is NOT REQUIRED if don't claim a 'Duty Exemption'.
It allows us to 'CLAIM' a duty exemption for "ONE YEAR'.

Who knows may be in the next year the Customs Duty would be gain imposed?

If the 'Proforma Invoice' describes the item as an 'Amateur Radio Item' with the HS Code 8525 20 04, I think that is enough for the Customs Officials to believe. But again being hams claiming an 'exemption', I think we need to take this 'certificate'!

Of course we can try by-passing WPC. But to be on the safe side, it is better to get a 'Cetrtificate' from WPC so that there is no problem at the time of release of the item from the customs.

IMPORT PERMIT:

In case of hams, Import Permit from DGFT is also not required. I referred to the Ministry of Commerce (DGFT) Exim Policy 1997-2002 at
http://dgft.delhi.nic.in/exim/2000/proc/hbchap-04.htm
Refer to Chapter 4 (Policy 4.1) # (iii) which says that persons importing or exporting goods for their personal use not connected with trade or manufacture are exempted from getting the IEC No. (Importer Exporter's code no)

Amateur radio equipment" (HS Code 852520 04), falls under the "Free Importability Clause" (OGL) in the "Exim Policy" of the Ministry of Commerce; So we don't need this too.

This way I was successful in importing my 'personal' ICOM IC-718 in 2000; But that was a month long nightmare for me till I could trace my rig and finally getting it from the 'postman' ! ! HI :-)

tnx & best 73 cheerio!

2303. CROSS POST from ARSI Import duty structure on Amateur Radio Equipments

Yahoo group: m_a_r_s
Date: 2005-03-04 14:01:35 UTC
From: Huzefa Merchant VU2HIT
Topic: 2303 Message: 2303

----- Original Message -----
From: ARSI
To: arsi@yahoogroups.com
Sent: Friday, March 04, 2005 7:08 PM
Subject: [ARSI] Import duty structure on Amateur Radio Equipments

As per new budget, following are the Import duty structure on Amateur Radio Equipments effective 01.03.2005

Classification No. : 85252016
Description : Amateur Radio Equipment
Customs duty : NIL - as per Customs Notification No.24/01.03.2005
CVD : 16%
EDU.CESS(Central excise) : 2% on 16% (0.320)
EDU.CESS(Customs) : 2% on 16% + 2% (16.320)

TOTAL : 16.646%

According to above, a ham need not obtain a WPC permit or exemption certificate. There is no need to produce your Amateur Radio Operators licence while clearance at Customs Clearance

HOWEVER;

The earlier system of obtaining an Import permit from WPC is also in existence.

According to Customs Notification No.21/2002 Sl.No.283 List.35 condition No.60 the rate of duty will be CUSTOMS DUTY 5% CVD 16% + 2% edu CESS & + 2% EDUCESS ON OVER ALL DUTY - this is confusing and contradictory.

Condition No.60 says that:

1. Obtain WPC permit
2. Total CIF Value Import should not exceed Rs.75,000/= under this notification.
3. Import of parts should not exceed Rs.1000/=

For any further clarification in this regard you may contact me.

2304. DAYANIDHI MARAN PRAISES THE YEOMAN SERVICE RENDERED BY THE UNSUNG HAM OPERATORS

Yahoo group: m_a_r_s
Date: 2005-03-04 15:07:22 UTC
From: VU2LOC

DAYANIDHI MARAN PRAISES THE YEOMAN SERVICE RENDERED BY THE UNSUNG HAM OPERATORS
11:45 IST

In order to acknowledge the yeoman services rendered by various organisations and teams who have voluntarily engaged themselves in the relief operations, etc., in the Tsunami-affected areas, the Minister of Communications & Information Technology, Shri Dayanidhi Maran, has placed on record his appreciation of the exemplary work of National Institute of Amateur Radio (NIAR), Hyderabad in the Tsunami affected areas, particularly in the Islands of Andaman & Nicobar. Shri Maran, himself a HAM, released the Amateur Radio Acknowledgement Card (popularly called HAM Card) to be sent as a thanks giving letter to all the 36,000 Ham Operators worldwide who were in contact and were associated with the relief services after the Tsunami disaster, so as to make the world community know about Indian resources, technical skills and institutions, like NIAR, which provided support during natural disasters.

The Department of Information Technology (DIT), in the year 1983-84 (then it was Department of Electronics) with a view to create awareness about Amateur Radio, popularly known as HAM, its use both as a hobby and in emergency communications, established the National Institute of Amateur Radio. It is the infrastructure established at NIAR which came as a great help over the last 20 years whenever a major natural calamity occurred – be it Orissa Super Cyclone in the year 1999 or the Gujarat Earthquake 2001 or Amarnath Yatra disaster and Latur Earthquake – or for that matter recently, the Tsunami disaster. Under a project funded by DIT recently, NIAR has augmented its infrastructure with state-of-the-art communication system, and has set up 10 new centres to help in Disaster Management in coordination with Ministry of Home Affairs and the associated State units. These centres also aim at training a large number of interested persons to become licensed HAM Operators.

It would be interesting and coincidental to note that as part of the project, a 5 member Amateur (HAM) Radio Operators Team form NIAR were conducting expedition, after 17 years, in Port Blair from 3rd December 2004, just three weeks ahead when the Tsunami waves came in. The earthquake, preceding the Tsunami, hit this region when the members of the team were on their regular routine of contacting other amateur radio stations worldwide. The team immediately took photographs of Tsunami waves and informed NIAR and other Hams all over the world about the impact of the earthquake, and swing into action in tandem with the local authorities.

The support provided by the NIAR Ham operations, using the equipment procured under the DIT, came very handy when other means of communications were either damaged or failed in the Tsunami affected areas of Andaman & Nicobar Islands. It enabled various sections of the affected population to communicate within and outside the Islands. The communication support and relief operations provided by NIAR received appreciation the world over, and from the local administration.

Following are some of the salient features in respect of the rescue and relief operations carried out, which attracted the worldwide attention:

¨ A total of 15 Ham members were deployed by NIAR

¨ 36,000 contacts were established on HAM

¨ Local authorities were first informed and provided with instant communication facilities to assist in their relief operations along with Air Force, Army and local administration units.

A big thank you to MARS for putting two more licences on the scene!!!!

To let you all know that my sister and brother recently got their licenses .

Sujata - VU2CVS - Charlie Victor Sierra
Karthik - VU2IZK - India Zulu Kilo

Appreciate all the efforts behind the scenes to get them!

Btw NLF, been unsuccessfully trying tomail you on vu2nlf@... . You
getting too much fan mail huh?!

Cheers!

Wow ZRS..

That was a nicely paced and interestingly worded account of the Fox Hunt !

I'd read all the reports over the past two weeks, but it's only now that I could get an inkling of the thrill of the whole event.

Congratulations, all !

2319. ISS school contact today 29th march at 2215 hrs IST

Yahoo group: m_a_r_s
Date: 2005-03-29 17:04:08 UTC
From: Deepak-VU2CDP
Topic: 2319 Message: 2319

Hi all,
Just finished listening(& recording of course) the ISS conatct with school students over the edu_net conference server via Echolink . Unfortunately the audio was not coming in clear. probably they were hoding the PC mic close to the xcvr(but not close enough) or the squelch was turned off as there was lot of QRM. Could make out the QSO in parts only and one of the many questions asked by the students which I could hear was regarding the kind of experiments the astronauts carry out on board and what kind of technical training is required to become an astronaut. The replies were sadly garbled.But i will go through the audio file again and see if i can get some more out of it and post more about this QSO. The only things that came in loud and clear were the squeals of delight and all round applause of those present. Like someone commented "as if someone had just scored a goal HI HI " It was good to hear happy voices after the contact.
The next conatct is scheduled for Friday, 8/4/2005 at 18:12 UTC (approx. 2345 hrs IST) yeah it's late.

So until next time my friends,
de VU2CDP gazing heavenwards and clear.

From: nilesh rathod
Topic: 2314 Message: 2320

Dear Amit,

firstly, if you have already submitted you application to me, then you do not have to send it again, if you have sent it to me, I am sure your application is already under process in WPC.. unfortunately I cannot confirm about your application as I am not in town and I don''t have access to all the paper work..

Nevertheless, if you have not submited your papers to me, then I suggest that you send your papers directly to WPC...and I will do the necessary followup once when I am back in town...

This goes for all students whose licences are pending.. all students who have already given their applications to me, will be receiving their tickets directly at their given address very shortly...

From: nilesh rathod
Topic: 2322 Message: 2322

Dear Members,

MARS always conducts its Annual General Meeting on 1st of MAY every year...

In order to conduct our AGM all our accounts should be completed and audited before the AGM...

All members are requested to clear all their accounts and pending queries with our treasurers VU2CBU & VU2SFN immediately, which will help us is completing our accounts before our AGM...

VU2CBU & VU2SFN are requested to kindly complete the accounts ASAP and consult our C.A Mr Dinesh Jain for finalizing and auditing our books of accounts... Mr. Dinesh Jain is already waiting for you guys to bring in the books...

Please note if these books are not ready soon... we may NOT be able to conduct our AGM on 1st May 2005...

| have constantly requested both our Treasurers (VU2CBU & VU2SFN) to complete these accounts.. In fact the last meeting we held on Sunday we were to finalize the books as I would not be available for the next 15 days..unfortunately VU2SFN could not attend because of his morning QTH..

Nevertheless | once again request VU2CBU & VU2SFN to do the needful ASAP

MARS and Hamfest India 2004 commitee is very grateful and thankful to VU2SFN, who is doing a great job as a acting treasurer for us...

Dear Members,

Hopefully we would be conducting our AGM on 1st May 2005... during which we would also be holding elections for our next Managing Commiteee...

All members eligible will be receiving their nomination forms shortly... I sincerely hope that this time we will good number of members contesting for the elections... we have about 230 members, out of which I think about 150 are eligible for elections...

Last year we could just barely get 7 members for MC.. they were appointed by default... I sincerely hope that this year we would have more members for elections.. especially the new generation....

2326. KN4LF Daily LF/MF/HF Radio Propagation Outlook #2005-013

Yahoo group: m_a_r_s
Date: 2005-04-01 06:35:08 UTC
From: Deepak-VU2CDP
Topic: 2326 Message: 2326

Hi all,
This is for your general information. If you are a DXer you should subscribe to the newsletter. It makes more sense reading it than trying to hear WWV Prop BC which generally comes in as ".....hisss.....crackle.....and the over A index was 1.....hisssssss........geomagnetic field was???? ....." (lost the tx)
:-)

Subject: KN4LF Daily LF/MF/HF Radio Propagation

Outlook #2005-013

Message-Id: <20050331180652.6B5CA4CC081@...>
Date: Thu, 31 Mar 2005 20:06:52 +0200 (CEST)

*** 425DXNews - www.425dxn.org ***

KN4LF Daily LF/MF/HF Radio Propagation Outlook #2005-013
http://www.kn4lf.com/kn4lf5.htm http://www.kn4lf.com/kn4lf6.htm

Date Format is MM/DD/YYYY

Published Friday 03/31/2005 At 1800 UTC Valid 04/01-07/2005

DISCUSSION-

The period 03/25-31/2005 was very quiet with one brief three hour minor geomagnetic storming (Kp-5) period, due to a high velocity solar wind stream emanating from geoeffective (Earth facing) coronal hole #153.

Due to the continued low daily sunspot count we experienced reduced MUF's that negatively impacted 10 and 12 meters. But we still saw some intermittent east-west F layer propagation on 10 and 12 meters, due to near equal day and night time in both hemispheres as we reached the Fall/Spring Equinox. There were also some Sporadic E (Es) openings on 6, 10 and 12 meters.

There was minor intermittent night time signal absorption on the MF AM broadcast band, 160 and 120 meters on high latitude propagation paths.

There was minor intermittent signal absorption on the LF band at nighttime and minor enhanced propagation conditions at daytime on high and mid latitude paths.

At times intense lightning QRN hampered receive conditions on 160 and 80 meters and to a lesser extent on 40 meters.

With the daily sunspot number and vaguely related solar flux on the decline and also due to seasonal chemical changes in the F layer we will not see any

appreciable east-west F layer propagation on 10 and 12 meters.

I expect HF propagation conditions to begin degrading on 04/02/2005, with LF and MF conditions to begin degrading on 04/03/2004, as a high velocity solar wind stream emanating from very large recurrent northern hemisphere geoeffective (Earth facing) coronal hole #154 begins blasting Earth's magnetosphere.

Occasionally high lightning QRN levels will continue to plague amateur and SWL radio operations thanks to the continuing weak El Nino, mainly in eastern Oceania and North and South America, including the Caribbean.

SOLAR, SPACE WEATHER AND GEOMAGNETIC CONDITIONS EXPECTED-

During the period quiet (Kp-1-2) geomagnetic conditions "WILL OCCUR".

During the period unsettled to active (Kp-3-4) geomagnetic conditions "WILL OCCUR".

During the period minor (Kp-5) geomagnetic storming "WILL OCCUR".

During the period moderate (Kp-6) geomagnetic storming is "PROBABLE".

During the period strong (Kp-7) geomagnetic storming is "POSSIBLE".

During the period severe to extreme (Kp-8-9) geomagnetic storming "WILL NOT OCCUR".

The chance of polar cap absorption on high latitude propagation paths due to excessive energetic protons >10 Mev (10+0) is "LOW".

The chance of daylight side SID radio blackouts from solar flares is "LOW".

The chance of a geoeffective (Earth facing) Coronal Mass Ejection (CME) is "LOW".

The chance of a geoeffective (Earth facing) Coronal Hole is "HIGH". CH #154.

Daily solar flux levels should range between 85-70.

No geoeffective (Earth Facing) sunspot groups currently contain a beta-gamma twisted magnetic signature capable producing M and X class solar flares.

The chance of a small C class solar flare is "LOW".

The chance of a large M class solar flare is "LOW".

The chance of a huge X class solar flare is "LOW".

Propagation Forecast Scales-

LOW- 25%

MEDIUM- 50%

HIGH- 75%

GLOBAL LF 30-300 KC PROPAGATION CONDITIONS EXPECTED-

Daytime- Poor, becoming fair on 04/03/2005.
Nighttime- Fair becoming poor for ham signals, good becoming fair for broadcast signals on 04/03/2005.

GLOBAL HF 3000-30000 KC PROPAGATION CONDITIONS EXPECTED-

Low Latitude- Good.

Mid Latitude- Good, becoming fair between 04/02-04/2005, back to good between 04/05-07/2005.

High Latitude- Fair to good, becoming poor between 04/02-04/2005, back to fair between 04/05-07/2005.

GLOBAL MF 300-3000 KC PROPAGATION CONDITIONS EXPECTED WITH AN EMPHASIS ON THE MF AM BROADCAST BAND, 160 METERS AND 120 METERS-

-Expect FAIR TO POOR "Northern Hemisphere" domestic propagation conditions on east-west paths out to approximately 1100 miles.

*Expect FAIR TO POOR "Northern Hemisphere" domestic conditions on north "TO" south paths out to approximately 1100 miles.

+Expect FAIR TO GOOD "Northern Hemisphere" domestic conditions on south "TO" north paths out to approximately 1100.

-Expect FAIR TO POOR "Southern Hemisphere" domestic propagation conditions on east-west paths out to approximately 1100 miles.

+Expect FAIR TO GOOD "Southern Hemisphere" domestic conditions on north "TO" south paths out to approximately 1100 miles.

*Expect FAIR TO POOR conditions on south "TO" north paths in the "Southern Hemisphere" out to approximately 1100 miles.

Equatorial region domestic propagation conditions out to approximately 1100 miles should be GOOD.

"High latitude" Northern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3200 miles should be GOOD TO FAIR, becoming POOR on 04/03/2005.

"High latitude" Southern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3200 miles should be GOOD TO FAIR, becoming POOR on 04/03/2005.

"Mid latitude" Northern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3200 miles should be GOOD, becoming FAIR on 04/03/2005.

"Mid latitude" Southern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific and cross equatorial propagation conditions in excess of approximately 3200 miles should be GOOD, becoming FAIR on 04/03/2005.

"Low latitude" Northern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific propagation conditions in excess of approximately 3200 miles should be GOOD.

"Low latitude" Southern Hemisphere (TA) Trans Atlantic, (TI) Trans Indian, (TP) Trans Pacific propagation conditions in excess of approximately 3200 miles should be GOOD.

Equatorial region to Northern Hemisphere "mid latitude" propagation conditions in excess of approximately 3200 miles should be GOOD.

Equatorial region to Southern Hemisphere "mid latitude" propagation conditions in excess of 3200 miles should be GOOD.

Equatorial region to Northern Hemisphere "high latitude" propagation conditions in excess of approximately 3200 miles should be GOOD, becoming fair on 04/03/2005.

Equatorial region to Southern Hemisphere "high latitude" propagation conditions in excess of 3200 miles should be GOOD, becoming fair on 04/03/2005.

Propagation Forecast Scales-

Excellent- +1 db Over S9 Or better
Good- S7-9
Fair- S4-6
Poor- S1-3

GLOBAL NOISE (QRN) OUTLOOK-

U.S. LIGHTNING STRIKE DATA
(See Where Your QRN Is Coming From)

Sorry but global views of near real time lightning strikes are no longer available.

https://thunderstorm.vaisala.com/tux/jsp/explorer/explorer.jsp

During the 7 day outlook period there will be "HIGH TO MODERATE" lightning induced QRN levels in low latitude areas of the Northern Hemisphere tied to winter season thunderstorms, cold/warm/occluded fronts, associated extra-tropical cold core low pressure systems and El Nino.

Northern hemisphere mid latitude regions can expect "HIGH TO MODERATE" lightning induced QRN tied to winter season thunderstorms, cold/warm/occluded fronts, associated extra-tropical cold core low pressure systems and El Nino.

Northern hemisphere high latitude regions can expect "MODERATE TO LOW" lightning induced QRN tied to winter season thunderstorms,

cold/warm/occluded fronts and associated extra-tropical cold core low pressure systems and El Nino.

During the outlook period there will be "HIGH TO MODERATE" lightning induced QRN levels in low latitude areas of the Southern Hemisphere due to the proximity of the Inter Tropical Convergence Zone (ITCZ) and tropical cyclones.

Southern hemisphere mid latitude regions can expect "HIGH TO MODERATE" lightning induced QRN, tied to summer season thunderstorms and tropical cyclones.

Southern hemisphere high latitude regions can expect "MODERATE TO LOW" lightning induced QRN tied to summer season thunderstorms, cold/warm/occluded fronts and associated extra-tropical cold core low pressure systems.

END OF OUTLOOK

SOLAR, SPACE WEATHER AND GEOMAGNETIC INDICES FOR THE PERIOD 03/25-31/2005

Sunspot Groups-

No sunspot group contained a beta-gamma or delta twisted magnetic signature that produced M or X class solar flares.

Solar Flux Readings- 83.0-76.1. My forecast was for 90-75.

SEC Sunspot Number- 65-11

Solar Wind Speed- 704-338

Solar Flares- C-0 M-0 X-0

Averaged Daily Background X-Ray Flux- A3.7-A2.0

Dst Index- -23 To +33

Elevated Energetic Protons >10 MeV (10+o)- 0

Geoeffective (Earth Facing) Coronal Mass Ejections- 0

Partially geoeffective (Earth Facing) Coronal Mass Ejections-0

Geoeffective Coronal Holes- 2, CH #153, 154

No polar cap absorption on high latitude propagation paths occurred due to excessive energetic protons >10 Mev (10+0).

The Ap index has been at quiet to minor geomagnetic levels, with a range of 2-39.

The Kp index has been at quiet to minor geomagnetic storming levels, with a range of 0 to 5.

The Boulder mid latitude K index has been at quiet to active geomagnetic storming levels, with a range of 0 to 4.

The high latitude K index has been at quiet to moderate geomagnetic storming levels, with a range of 0-6.

***Here are some "general" guidelines concerning correlation of propagation indices to actual expected HF/MF propagation conditions.

1.) Dropping indices numbers are better, with the exception of solar flux and sunspot number on HF.

2.) For medium frequencies a solar flux under 150, under 100 better, 70 is best for E layer multi hop. For high frequencies over 125 is good, over 150 is better, over 200 is best.

Keep in mind though that at medium frequencies the 10.7 cm (2800 mhz) solar flux index is not a "reliable" gauge of ionization in our atmosphere, as the energy of photons at this frequency is to low on the order of one million times. However most are used to solar flux and sunspot number and it's a hard habit to break. A better indicator is the background x-ray flux. See #7.

3.) Solar flux of at least 100 for E valley-F layer ducting mechanism.
4.) Previous 24 hour Ap index under 10, under 7 for several days consecutively is best.
5.) Previous 3 hour Kp index under 3 for mid latitude paths, under 2 for high latitude paths, 0-1 for several days consecutively is best.
6.) Energetic protons no greater then 10 MeV (10+0) for 160/120 meters and no greater then (10-1) on MF AM broadcast band.
7.) Background x-ray flux levels less than C1 for several days consecutively for 160/120 meters and less then B9 for MF broadcast band but A9 or less is best.
8.) No current STRATWARM alert.
9.) IMF Bz with a (+) sign, indicates a lesser chance of high latitude path auroral absorption/unpredictable refraction or scattering of MF RF signals, when the Kp is above 3.

10.) A -50 or better towards a positive number Dst index during the recovery time after a geomagnetic storm, as related to the Equatorial Ring Current.

TODAY'S PROPAGATION LESSON -

17.) Sporadic-D (Ds) Absorption & Wave Guiding-

Sporadic-D (Ds) occurrences have an inter-relationship with brief but intense Sun based and Galactic X-rays and Cosmic Rays, huge positive cloud to ground lightning strokes and interrelated Elves and Sprites. Very large bursts of Gamma Rays have also been observed to occur in conjunction with Sprites.

Sporadic-D (Ds) absorption occurs both at day and night. Much of the night time occurrence of Sporadic-D (Ds) absorption is often masked by lightning QRN, as well as a lack of radio operation during thunderstorm events due to

the lightning strike hazard and/or high QRN levels and also due to the operator not being able to recognize the mode due to unfamiliarity with it. It's doubtful that you will read about the Sporadic-D (Ds) phenomena anywhere else other then on this website.

While on the topic of lightning and propagation, an ionized lightning channel which normally has a maximum diameter of approximately a silver dollar, can reflect RF much like meteor trails do. I've personally noticed it on the 70 cm band, as a single propagation burst lasting 1/4 to 1/2 second. (See definition #20. D Region Mid Winter Absorption Anomaly).

For more information go to KN4LF LF/MF/HF Frequency Radio Propagation Theory Notes at http://www.kn4lf.com/kn4lf8.htm .

Space Weather Scales-

Kp Indices-

G5 = Extreme Storm - Kp = 9
G4 = Severe Storm - Kp = 8
G3 = Strong Storm - Kp = 7
G2 = Moderate Storm - Kp = 6
G1 = Minor Storm - Kp = 5
Active - Kp = 4
Unsettled - Kp = 3

Ap Indices-

Ap 100-400 Severe Storm
Ap 50-99 Major Storm
Ap 30-49 Minor Storm
Ap 16-29 Active
Ap 8-15 Unsettled
Ap 0-7 Quiet

Correlation Of Kp To Ap Indices-

K- 0= A- 0
K- 1= A- 3
K- 2= A- 7
K- 3= A- 15
K- 4= A- 27
K- 5= A- 48
K- 6= A- 80
K- 7= A- 140
K- 8= A- 240
K- 9= A- 400

While I won't be an active participant like most of the Mumbai based HAMS could be (I'm in Nashik), I volunteer for all computer and Linux related HAM activities.

I'm now a visiting lecturer at a local BE College, and will be interacting with a growing number of Electronics students - whom I hope to motivate to investigate about Amateur Radio. So local help for electronics seems feasible to me !

From: harshvardhan_k
Topic: 2333 Message: 2333

Hi All,

You may find this website useful.

Kevin Custer, W3KKC, put together The Repeater Builders
Technical Information Page to help other people build
and maintain their repeaters. The site deals mainly
with various Motorola®, and GE ® Mobile modifications
for duplex repeater operation, however, every repeater
builder and tinkerer will find useful information on
this Web site.
The Web site covers repeater transmitters, receivers,
power supplies, control circuits, antennas, duplexers,
circulators, isolators, feedlines and even repeater
site topics.

http://www.repeater-builder.com/rbtip/

Best wishes,

Harsh Vardhan

Hello Fellow hams,

I wonder it would be a good idea to have our AGM ON
1st may , its 17th of april today and there are no
accounts available for verification , besides there no
agenda given out so how does one prepares for AGM , I
Guess constitutionally too this would be correct
procedure and not just a formality

Excellent wok Dear Old MAN HIT & ZRS & AXN (unlimited). Keep up the Good Work!!

Huzefa Merchant VU2HIT <vu2hit@...> wrote:The long duration shut repeater is back into action.

The repeater which had been shut due to some technical problems is put back into action by the trio VU2ZRS Zyros Zend, VU2HIT Huzefa Merchant and VU2AXN Ankur Puranik.

The transmitter of the repeater had blown out due to over heating and so it had to be replaced with another base station.

Last time inspite of informing everyone to keep the overs short and to allow 'carrier dropping' ,a few Hams still continued giving very long overs without letting the carrier drop, to the extent that the repeater was forced into self thermal shutdown due to over heating.

My dear friends during a QSO a repeater is transmitting continously unlike your own rigs which listen when you are not transmitting and so get enough time to cool off. But the repeater is continously listening and continously transmitting.

Hence its a sincere request to all HAMS using the repeater, to keep the overs short and to let the carrier drop in between conversations. And if you feel your HAM friend is giving long overs please inform him the same without hesitation.

Also those who wish to have long over QSO's may please QSY to another freq.

The repeater will not be attended again if it malfunctions due to over heating.

Secondly the Co-axial cable of the Repeater needs to be replaced as it has been damaged. It has been very kind of one of our fellow ham (doesnt wish to be named) to lend us his own cable for a period of one month. So many many thanks to him for the help.

Hope every one uses the repeater sensibly this time.

Its our repeater, so lets make a wiser use of it.

From: Deepak-VU2CDP
Topic: 2339 Message: 2339

That is indeed good news and good work by the three of you. With my own experience I can tell there have been a few fellow hams who have operated the rptr without giving much thought to how it operates and what possible damage can be caused by a long qso(i understand it was out of sheer ignorance). Also there have been QSOs where the other charlie did not even give the customary pause in TX after the other station had stopped TX. This way the rptr has been txing continuously throughout the QSO. Before the repeater went up our good old friend UGO had sent a few files that described repeater operation & repeater operating etiquettes. Still have those files so if needed I will upload those files in the MARS egroup.
Another preventive measure would be to have a timer in the rptr that shuts off TX after a certain interval. A good example is the Calcutta Rptr which has a two minute timer (homebrewed) that auto shuts off TX. That way all are aware of their overs.

The good ham is one who does not interfere with the operating pleasure of others and same principle applies more to repeater operation. So let us vow to be more considerate towards others and care for our repeater.

Happy hamming. 73s

Last time inspite of informing everyone to keep the overs short and to allow 'carrier dropping' ,a few Hams still continued giving very long overs without letting the carrier drop, to the extent that the repeater was forced into self thermal shutdown due to over heating.

My dear friends during a QSO a repeater is transmitting continously unlike your own rigs which listen when you are not transmitting and so get enough time to cool off. But the repeater is continously listening and continously transmitting.

Hence its a sincere request to all HAMS using the repeater, to keep the overs short and to let the carrier drop in between conversations. And if you feel your HAM friend is giving long overs please inform him the same without hesitation.

Also those who wish to have long over QSO's may please QSY to another freq.

The repeater will not be attended again if it malfunctions due to over heating.

Secondly the Co-axial cable of the Repeater needs to be replaced as it has been damaged. It has been very kind of one of our fellow ham (doesnt wish to be named) to lend us his own cable for a period of one month. So many many thanks to him for the help.

Hope every one uses the repeater sensibly this time.

Its our repeater, so lets make a wiser use of it.

Hi Nirav,
NLF is outstation. Don't know when he is coming back. MARS may start a new batch for newcomers but that is after the new managing commitee comes into force for which elections will be held in due course of time. Till then your friend will have to be patient and scout the net for information on ham radio beginners. He may visit www.qsl.net/vu2mue and download all the material for the ASOC exam for his use.

2356. India gives global Ham operators own satellite

Yahoo group: m_a_r_s
Date: 2005-05-03 12:10:27 UTC
From: VU2LOC
Topic: 2356 Message: 2356

India gives global Ham operators own satellite

Indo-Asian News Service
Sriharikota, (Andhra Pradesh), May 2, 2005

India has a gift for Ham radio operators worldwide - an exclusive satellite to be launched on Thursday that they can access for free.

The 42.5 kg micro-satellite is one of two that will be sent aloft from this launch pad that day. Today, there is no HAMSAT in the skies, the last one having died two years ago. That was the American AMSAT.

The Indian HAMSAT was originally scheduled to go up in 2003 but got delayed. Once it is up, it will be the only satellite of its kind in orbit.

"The amateur radio operators' community is eagerly awaiting the ISRO (Indian Space Research Organisation) initiative, which will allow them to use the UHF/VHF bandwidths for transmission and reception," project director JP Gupta said.

Saudi Arabia has a HAMSAT in the sky, but this is available only to operators in the Middle East. The transponders are switched on only when this satellite moves over Saudi Arabia and the Gulf countries.

"India will make available the ISRO HAMSAT to everyone in the world, free of cost", Gupta said.

This satellite cost Rs 30 million ($690,000) and is expected to be operational for at least two years. By that time, ISRO hopes to come up with a second more advanced version.

Ham radio services have proved very useful in remote areas, especially during disasters. This was more than evident after the December 26 killer tsunami struck the Andaman and Nicobar Islands. The Ham operators on the islands were the first to establish contact with the outside world.

There is a subscript to this tale.

The defence ministry had all these years forbidden Ham radio operators from the islands, citing their strategic location. Permission was finally granted on December 15, 2004 and two Ham operators from Chennai landed on the islands within a week, just days before the tsunami struck.

Had the Ham operators not been there, it might have taken a lot longer for the world to learn about the disaster or the extent of damage.

Most components of the ISRO HAMSAT have been fabricated in India with help from experts of the Indian AMSAT Society. ISRO developed one transponder of the satellite and the other with the help of Dutch scientists.

With its own HAMSAT, India is hoping to rope in and involve the amateur radio operators' community into its integrated disaster management plan, experts say.

2357. INDIAN HAM SATELITE

Yahoo group: m_a_r_s
Date: 2005-05-04 14:17:28 UTC
From: Micky Korde
Topic: 2357 Message: 2357

Dear all,

GOOD NEWS

Indian Space Research Organisation (I.S.R.O.)will be launching a satelite which is named as CARTOSAT-1 ON THE 5th of MAY, of which the launching countdown time has already started on Tuesday at early hours.

This is the 11th one in the series of COMMUNICATION SATELITES & along with CARTOSAT-1, HAMSAT, a small satelite weighing just 42.5kgs will also be launched for the Amateur Radio Operators, especially for the Southern Asian Region Ham Operators.

The satelite will be launched by the Polar Satelite Launching Vehicle, from Satish Dhavan Space Center-SHRIHARIKOTTA between 10.19am to 10.40am

2358. India Space Program Goes A Little Closer To The Moon

Yahoo group: m_a_r_s
Date: 2005-05-05 10:50:00 UTC
From: VU2LOC
Topic: 2358 Message: 2358

India Space Program Goes A Little Closer To The Moon

John Stith | Staff Writer | 2005-05-04

The Indian Space Research Organization (ISRO) will send another rocket into space on May 5th 2005. At a time when NASA is dominating headlines, Indian pushes their program forward by two satellites into orbit.

The primary satellite, the CARTOSAT-1 will be Indian's 11th satellite since the ISRO program was started in 1969. The unit is a remote sensing satellite to be used primarily for cartographic purposes. It comes with two cameras and will be in polar synchronous orbit. They intended use for the satellite will be land and resource management as well as help with disasters and other civil purposes.

Riding on the back of the CARTOSAT-1 is the HAMSAT. The HAMSAT is for HAM radio operators. Launched as an auxiliary satellite along with CARTOSAT-1, the 42.5 kg HAMSAT will meet the long felt need of the Amateur Radio Operators in the South Asian region who possess the required equipment and operate in the UHF/VHF band based Satellite Radio Communication.

The rocket being used, PSLV C6, has been in India's stable since 1994. The vast improvement over its initial uses will make it much easier for India to advance their program. PSLV was initially designed by ISRO to place 1,000 kg class Indian Remote Sensing (IRS) satellites into 900 km polar Sun-synchronous Orbits. Since the first successful flight in October 1994, the capability of PSLV has been enhanced from 850 kg to the present 1,600 kg into 618 km polar Sun Synchronous Orbit.

India considers the success of this program crucial as they are giving serious consideration to a moon shot.

Hi All,
I am eager to listen to HAMSAT audio when its activated.
It would be great if anyone in this group record signals(may be of 5 minutes) and store that file on server!.

Best Regards
Kiran

Ulhas: If you are curious about the frequency of the
Indian transponder of the Cartosat... here's something
that might help you.
Uplink: 435.225 MHz - 435.275 MHz
Downlink: 145.875 MHz - 145.925 MHz

Kiran: since you need to hear the satellite, it also
has a beacon that transmits a continuous carrier on
145.940 MHz.

Hope this might help the others as well, once it sets
in action after remote activation.

I've procured this information from external sources
and hence do not myself endorse the authenticity of
the same. It is purely for information.

Regards,
Huafrid

2363. Sorry about the long mail but I really had a dream

Yahoo group: m_a_r_s
Date: 2005-05-06 18:12:11 UTC
From: ULHAS
Topic: 2363 Message: 2363

I had a dream.
When I was a kid, I was always curious about the radio. There were a lot of programs to listen to on the radio. Television was not a reality & it was heard of only in America. Life was full of fun, we used to go to the park to play or just used to meet & chat. Sitting on the Shivaji Park lawns or Dadar chowpaty was a daily ritual. & many evenings were spent enjoying the talk with friends or listening to the radio at Lion’s Park near Dadar cemetery listening to Vividh Bharati, lying on the cool grass & under open skies. I remember going to the neighbour’s place for listening to a particular program, because not everybody had a radio.

Transistors were a revolution. People used to carry them around to show off their affluence, listening to the horrific thing called cricket commentary. I have always enjoyed the Bhoole Bikhre geet on Vividh Bharati or on Radio Ceylon, alas which is no more to be heard anymore, for reasons known only to those riding the airwaves. Chhayageet at 10pm was another lovely thing, also on Bombay A they used to play beautiful English songs. I also had a thing about listening to BBC & Voice of America for listening to the news. Also BBC had the Big Ben giving you the time signal which is supposed to be in perfect coordination with their Greenwich Atomic Clock. And they were supposed to give the correct news without prejudice which I doubt, but that may be my prejudice.

Sometime in between the Morbi Dam broke & the papers were full of stories. Some of the stories related to something called Ham operators who let the world know about the havoc caused by the floods. I also had a frind in college who was training for the morse code. Half the guys with us wanted to become shippies & radio officers was one of the choices. There was also an article in the newspapers about a hobby, l;istening to distant radio stations & sending them the reports which they will acknowledge by sending QSL cards.

All this till I went to Sikkim. Govt of Sikkim, Dept of Tourism had organized a trek to Dzongri. This was their first experiment. To cut a long story short, I went to Sikkim. The trek started from Yoksam, I

started alone from here as the friend who was supposed to accompany me dropped out at the last moment. Anyway, from Yoksam to Dzongri, there were about four camps & all were in communication with each other on walkie talkies. I was fascinated & kept asking the guys in charge how it works. They were not very knowledgeable, but they told me you can communicate till you are in line of sight. Wow! I remember the nights spent in the mountains & jungles, trying to search for lost friends & not so friendly creatures. What a beautiful aid this toy will be. While climbing a difficult pitch or while hiking in the forest in the night, that's where this will be most useful. So I wanted to know more about ham radio. I searched this elusive hobby. Sometimes there used to be some small article in the newspapers about ham radio classed starting in Bharda High School or somewhere. I never could find this place.

Suddenly, there was a small news item in Times of India hidden somewhere in a corner about a demonstration to be held at a Churchgate school about Ham Radio. It was a Saturday afternoon. So I went. Alone as usual because people are wary of my curiosities about strange things, so they tend to drop out at the last moment. Anyway, I sat through the demo & there was an announcement about starting the classes. There was no question about second thoughts. I joined instantly.

We sat through the classes. Bleary eyed Sunday mornings, interesting, boring, never-ending lectures, sometimes you felt time was not enough, sometimes it went too long. It was exciting times. We were told about scramble teams & how a ham should behave & how one should not behave. There was the unforgettable field trip & finally the exam. The wait for the results & the police enquiries & the callsign preference letters. In between we went for the Ganpati Visarjan, the highlight of the year for MARS. Along came the hamfest & of course we went there very enthu. The one experience of a scramble team I was able to get was fantastic. I was longing for further such experiences.

Somewhere in between, MARS became stagnant. There were fights & accusations & bitterness. There were fewer & fewer people for the monthly meetings. The meeting were more & more aggressive.

There was supposed to be a AGM on the 1st May. There was an auto-generated message, but no further news of the meeting. Ergo, there was no AGM on 1st May.

I would like to know what happened to Mumbai Amateur Radio Society. Are we to remain a society of radio enthusiasts, dedicated to the service of mankind & interest of the hobby of radio & electronics?

Will my dream be shattered or it will remain?

Ulhas, it was very well written experience. I think most of the Hams today have started their interest more or less the same way.

Fascinating fact of the hobby is it has no boundaries. I am not sure about the in presence activity there now, but there is very much to talk on air. And if you are enthusiast, you will have no stopping. Ham radio will not end with a group of people!..

Subject: INDIAN BRAVERY (Please read)

They died protecting our lives. Spare some time for these brave men..

Lt. Saurabh Kalia of 4 JAT Regiment of the Indian Army laid down his life at the young age of 22 for the nation while guarding the frontiers at Kargil. His parents, indeed the Indian Army and nation itself, lost a dedicated, honest and brave son. He was the first officer to detect and inform about Pakistani intrusion. Pakistan captured him and his patrol party of 5 brave men alive on May 15, 1999 from the Indian side of LOC.

They were kept in captivity for three weeks and subjected to unprecedented brutal torture, evident from their bodies handed over by Pakistan Army on June 9, 1999. The Pakistanis indulged in dastardly acts of inflicting burns on the Indians with cigarettes, piercing their ears with hot rods, removing their eyes before puncturing them and breaking most of the bones and teeth.
They even chopped off various limbs and private organs of the Indian soldiers besides inflicting unimaginable physical and mental torture.
After 22 days of torture, the brave soldiers were ultimately shot dead. A detailed post-mortem report is with the Indian Army.

Pakistan dared to humiliate India this way flouting all international norms. They proved the extent to which they can degrade humanity. However, the Indian soldiers did not break while undergoing all this unimaginable barbarism, which speaks volumes of their patriotism, grit, determination, tenacity and valour - something all of India should be proud of.

Sacrificing oneself for the nation is an honour every soldier would be proud of, but no parent, army or nation can accept what happened to these brave sons of India.

I am afraid every parent may think twice to send their child in the armed forces if we all fall short of our duty in safeguarding the PRISONERS OF WAR AND LET THEM MEET THE FATE OF LT. SAURABH KALIA. It may also send a demoralising signal to the army personnel fighting for the Nation that our POWs in Pak cannot be taken care of. It is a matter of shame and disgust that most of Indian Human Rights Organisations by and large, showed apathy in this matter.

Through this humble submission, may I appeal to all the civilized people irrespective of colour, caste, region, religion and political lineage to stir their conscience and rise to

take this as a NATIONAL ISSUE?
International Human Rights Organisations must be approached to expose and pressure Pakistan to identify, book and punish all those who perpetrated this heinous crime to our men in uniform. If Pakistan is allowed to go unpunished in this case, we can imagine the consequences.

Below is the list of 5 other soldiers who preferred to die for the country rather than open their mouths in front of enemy.

1. Sep. Arjun Ram s/o Sh. Chokka Ram; Village & PO Gudi. Teh. & Dist. Nagaur (Rajasthan)
2. Sep. Bhanwar Lal Bagaria h/o Smt. Santosh Devi; Village Sivelara; Teh. & Dist. Sikar (Rajasthan)
3. Sep. Bhikaram h/o Smt. Bhawri Devi; Village Patasar; Teh. Pachpatva;Distt. Barmer (Rajasthan)
4. Sep. Moola Ram h/o Smt. Rameshwari Devi; Village Katori; Teh. Jayal;Dist. Nagaur (Rajasthan)
5. Sep. Naresh Singh h/o Smt. Kalpana Devi; Village Chhoti Tallam; Teh.Iglab; Dist.Aligarh (UP)

Yours truly,

Dr. N.K. Kalia (Lt. Saurabh Kalia's father).
Saurabh Nagar,
Palampur-176061
Himachal Pradesh
Tel: +91 (01894) 32065

Please sign in by writing your name and then copy and paste it again to forward it to your friends and relatives. Let us give some supporting hand to Dr. Kalia in his efforts to get justice. Remember, Lt Kalia and his colleagues died on the front so that we could sleep peacefully in our home.

PLEASE DON'T BREAK THE ONWARD MOVEMENT OF THIS MAIL. WE SEND MANY SILLY MAILS TO OUR FRIENDS WHICH COMPEL ONE TO FORWARD BY SAYING THAT IT MAY HARM YOU IF YOU WON'T DO SO. BUT HERE IT IS NOTHING LIKE THAT, IT WILL ONLY BE YOU WHO WILL FEEL SATISFIED IF YOU WILL CONTRIBUTE TO THE CAUSE.

disgust that most of Indian Human Rights Organisations by and large, showed apathy in this matter.

Through this humble submission, may I appeal to all the civilized people irrespective of colour, caste, region, religion and political lineage to stir their conscience and rise to take this as a NATIONAL ISSUE?
International Human Rights Organisations must be approached to expose and pressure Pakistan to identify, book and punish all those who perpetrated this heinous crime to our men in uniform. If Pakistan is allowed to go unpunished in this case, we can imagine the consequences.

Below is the list of 5 other soldiers who preferred to die for the country rather than open their mouths in front of enemy.

1. Sep. Arjun Ram s/o Sh. Chokka Ram; Village & PO Gudi. Teh. & Dist. Nagaur (Rajasthan)
2. Sep. Bhanwar Lal Bagaria h/o Smt. Santosh Devi; Village Sivelara; Teh. & Dist. Sikar (Rajasthan)
3. Sep. Bhikaram h/o Smt. Bhawri Devi; Village Patasar; Teh. Pachpatva;Distt. Barmer (Rajasthan)
4. Sep. Moola Ram h/o Smt. Rameshwari Devi; Village Katori; Teh. Jayal;Dist. Nagaur (Rajasthan)
5. Sep. Naresh Singh h/o Smt. Kalpana Devi; Village Chhoti Tallam; Teh.Iglab; Dist.Aligarh (UP)

Yours truly,

Dr. N.K. Kalia (Lt. Saurabh Kalia's father).

Hi All
The Indian transponder has a continous beacon on 145.940 (you can hear upto 145. 933.with doppler) no morse msg.
It can be heard quite good.
I look for the becaon sig first , then move to other modes.

The Dutch transponder has a CW msg beacon on 145.860.
Only one transponder will be on at a time so respective beacons can be heard when switched on.
Happy HAMSATing

Hi friends!
Thanks for info.
HAMSAT aka VUSAT aka VO-52 (VUSat OSCAR-Orbiting Satellite Carrying Amateur Radio).

Has anybody copied the CW beacon on 145.860 MHz?
How long the beacon message is?
Is it just the CW identification DE VO52?

Do you Yahoo!?

From: Rahul Srivastava
Topic: 2370 Message: 2370

Dear Dr Kalia and others,

HAM operators have proved themselves many times over during time of crisis and when ever the country calls.

We are proud of martyrs who laid down their life for our safety and security. Irony I also look upon it as a shame on the other country who did not even acknowledge death of their soldiers. What a shame indeed. I have my sympathy with the soldiers of that country they simply died in vain.
We have been guided by principles of Lord Buddha but never the less we also can tackle demons as Lord Rama did and sure enough we will fight for the truth in true spirit of Mahabharatha.

Being this a radio group : HAMSAT is up you can download Satscape and update it from kepler from hamsat india. You get accurate pass prediction as well as a good 3D visual software.

The sat can be heard on a simple 2 mtr handy with a slightly decent antenna. A 5W UHF signal with modest gain antenna will trigger the sat my good frined SBJ managed to do it with 1W and 6 el 70cm yagi.

Good luck to all.

73

Subject: INDIAN BRAVERY (Please read)

They died protecting our lives. Spare some time for these brave men..

Lt. Saurabh Kalia of 4 JAT Regiment of the Indian Army laid down his life at the young age of 22 for the nation while guarding the frontiers at Kargil. His parents, indeed the Indian Army and nation itself, lost a dedicated, honest and brave son. He was the first officer to detect and inform about Pakistani intrusion. Pakistan captured him and his patrol party of 5 brave men alive on May 15, 1999 from the Indian side of LOC.

They were kept in captivity for three weeks and subjected to unprecedented brutal torture, evident from their bodies handed over by Pakistan Army on June 9, 1999. The Pakistanis indulged in dastardly acts of inflicting burns on the Indians with cigarettes, piercing their ears with hot rods, removing their eyes before puncturing them and breaking most of the bones and teeth.
They even chopped off various limbs and private organs of the Indian soldiers besides inflicting unimaginable physical and mental torture.
After 22 days of torture, the brave soldiers were ultimately shot dead. A detailed post-mortem report is with the Indian Army.

Pakistan dared to humiliate India this way flouting all international norms. They proved the extent to which they can degrade humanity. However, the Indian soldiers did not break while undergoing all this unimaginable barbarism, which speaks volumes of their patriotism, grit, determination, tenacity and valour - something all of India should be proud of.

Sacrificing oneself for the nation is an honour every soldier would be proud of, but no parent, army or nation can accept what happened to these brave sons of India.

I am afraid every parent may think twice to send their child in the armed forces if we all fall short of our duty in safeguarding the PRISONERS OF WAR AND LET THEM MEET THE FATE OF LT. SAURABH KALIA. It may also send a demoralising signal to the army personnel fighting for the Nation that our POWs in Pak cannot be taken care of. It is a matter of shame and disgust that most of Indian Human Rights Organisations by and large, showed apathy in this matter.

Through this humble submission, may I appeal to all the civilized people irrespective of colour, caste, region, religion and political lineage to stir their conscience and rise to take this as a NATIONAL ISSUE?
International Human Rights Organisations must be approached to expose and pressure Pakistan to identify, book and punish all those who perpetrated this heinous crime to our men in uniform. If Pakistan is allowed to go unpunished in this case, we can imagine the consequences.

Subject: INDIAN BRAVERY (Please read)

They died protecting our lives. Spare some time for these brave men..

Lt. Saurabh Kalia of 4 JAT Regiment of the Indian Army laid down his life at the young age of 22 for the nation while guarding the frontiers at Kargil. His parents, indeed the Indian Army and nation itself, lost a dedicated, honest and brave son. He was the first officer to detect and inform about Pakistani intrusion. Pakistan captured him and his patrol party of 5 brave men alive on May 15, 1999 from the Indian side of LOC.

They were kept in captivity for three weeks and subjected to unprecedented brutal torture, evident from their bodies handed over by Pakistan Army on June 9, 1999. The Pakistanis indulged in dastardly acts of inflicting burns on the Indians with cigarettes, piercing their ears with hot rods, removing their eyes before puncturing them and breaking most of the bones and teeth.
They even chopped off various limbs and private organs of the Indian soldiers besides inflicting unimaginable physical and mental torture.
After 22 days of torture, the brave soldiers were ultimately shot dead. A detailed

post-mortem report is with the Indian Army.

Pakistan dared to humiliate India this way flouting all international norms. They proved the extent to which they can degrade humanity. However, the Indian soldiers did not break while undergoing all this unimaginable barbarism, which speaks volumes of their patriotism, grit, determination, tenacity and valour - something all of India should be proud of.

Sacrificing oneself for the nation is an honour every soldier would be proud of, but no parent, army or nation can accept what happened to these brave sons of India.

I am afraid every parent may think twice to send their child in the armed forces if we all fall short of our duty in safeguarding the PRISONERS OF WAR AND LET THEM MEET THE FATE OF LT. SAURABH KALIA. It may also send a demoralising signal to the army personnel fighting for the Nation that our POWs in Pak cannot be taken care of. It is a matter of shame and disgust that most of Indian Human Rights Organisations by and large, showed apathy in this matter.

Through this humble submission, may I appeal to all the civilized people irrespective of colour, caste, region, religion and political lineage to stir their conscience and rise to take this as a NATIONAL ISSUE?
International Human Rights Organisations must be approached to expose and pressure Pakistan to identify, book and punish all those who perpetrated this heinous crime to our men in uniform. If Pakistan is allowed to go unpunished in this case, we can imagine the consequences.

Below is the list of 5 other soldiers who preferred to die for the country rather than open their mouths in front of enemy.

1. Sep. Arjun Ram s/o Sh. Chokka Ram; Village & PO Gudi. Teh. & Dist. Nagaur (Rajasthan)
2. Sep. Bhanwar Lal Bagaria h/o Smt. Santosh Devi; Village Sivelara; Teh. & Dist. Sikar (Rajasthan)
3. Sep. Bhikaram h/o Smt. Bhawri Devi; Village Patasar; Teh. Pachpatva;Distt. Barmer (Rajasthan)
4. Sep. Moola Ram h/o Smt. Rameshwari Devi; Village Katori; Teh. Jayal;Dist. Nagaur (Rajasthan)
5. Sep. Naresh Singh h/o Smt. Kalpana Devi; Village Chhoti Tallam; Teh.Iglab; Dist.Aligarh (UP)

Yours truly,

Dr. N.K. Kalia (Lt. Saurabh Kalia's father).
Saurabh Nagar,
Palampur-176061
Himachal Pradesh
Tel: +91 (01894) 32065

Please sign in by writing your name and then copy and paste it again to forward it to your friends and relatives. Let us give some supporting hand to Dr. Kalia in his efforts to get justice. Remember, Lt Kalia and his colleagues died on the front so that we could sleep peacefully in our home.

PLEASE DON'T BREAK THE ONWARD MOVEMENT OF THIS MAIL. WE SEND MANY SILLY MAILS TO OUR FRIENDS WHICH COMPEL ONE TO FORWARD BY SAYING THAT IT MAY HARM YOU IF YOU WON'T DO SO. BUT

HERE IT IS NOTHING LIKE THAT, IT WILL ONLY BE YOU WHO WILL FEEL SATISFIED IF YOU WILL CONTRIBUTE TO THE CAUSE.

JAI HIND .....Victory to India

2371. CNN Video Clip on HAMs

Yahoo group: m_a_r_s
Date: 2005-05-12 08:51:13 UTC
From: HVK
Topic: 2371 Message: 2371

CNN International ham radio tsunami response video clip available (May 11, 2005) -- Readers of the article "'Zulu Stations' a Mainstay in Hard-Hit Indonesia," by Wyn Purwinto, AB2QV, and Charles Harpole, K4VUD, in the May 2005 issue of QST may be interested in viewing a CNN International video depicting the role of Amateur Radio following the December 2004 earthquake and tsunami in South Asia that claimed upward of 275,000 lives and left many thousands homeless. The video, part of the network's "Global Challenges" series, was televised overseas but not in the US. It focuses on how the Andaman and Nicobar Islands VU4RBI/VU4NRO DXpedition led by Bharathi Prasad, VU2RBI, quickly became an Amateur Radio emergency communication operation for the region. The video segment also discusses the social aspects of ham radio. The clip, which contains video and photos taken by Harpole and an interview with Prasad, runs 7:25 and is 77 MB, so a high-speed connection is highly recommended. John
Harper, AE5X, has made the video clip available for downloading--approximately 5 minutes over a broadband connection--via his "AE5X QRP & Other Wireless Pursuits" Web site.

The Server gives an error msg saying BW exceeded by user. Unable to download ;-(
Even the previous link that was made available through an FTP location did not have the file as DAP 5.0 gave an error saying "target file does not exist at location"

From: Deepak-VU2CDP
Topic: 2378 Message: 2378

Hi there to all ye faithful in radio land,

Some time back there was a mail from Sriram N. about how CW beat text messaging at a demonstration. Well there was a repeat of it on The Tonight Show hosted by Jay Leno where two old timers beat two "dudes". The video is available for download from the following locations:
http://hamradio.dyns.net
http://www.ku3o.net/

The OTs look silly as if participating in fancy dress competition dressed as old telegraph operators of the US Postal Service; but forget the outfits and try copying what they send and you shall know CW still rocks baby!!

The msg was: " I saved a bunch of money on my car insurance"

Subject: [CQ_VU] Low-power wireless to be freed

@http://www.telegraphindia.com/1050606/asp/business/story_4832465.asp
New Delhi, June 5: The government will soon de-license the use of `citizen band' low-power devices (one milli-watt) on selected frequencies to popularise the use of wireless fidelity (Wi-fi) based gizmos, amateur radio, aero-modelling, mountaineering and trekking.

According to Union communications ministry officials, the necessary notification for the use of the citizen band will be issued in the next few days.

This will allow use of low-power equipment in the frequency band 26.957-27.283 mega hertz (MHz), also known as citizen band with 5 Watt effective radiated power and built-in antenna, on non-interference, non-protection and shared (non-exclusive) basis.

The decision to de-licence the use of low-power devices was initiated by the BJP-led NDA government. But it hit a roadblock because the security agencies had sought certain clarifications and wanted some measures to avoid misuse of the facility.

Recently, the communications minister, Dayanidhi Maran, had announced that the ministry would get the necessary clearance for the citizen band to be used by the people, particularly the students, in remote parts.

Persons who are using such citizen band equipment for hobbies like aero-modelling, mountaineering, trekking and for radio control of models can now operate without a licence.

In addition, the government has also simplified the procedure to acquire licences for amateur radios and has extended the time limit for licences. The amateur licences are issued for a maximum period of five years. Now a radio amateur licence can be issued for a period of 20 years or for lifetime, which will reduce the need to approach the department repeatedly for renewal of the licence.

The government has already de-licensed the use of wireless equipment in the frequency band 2.4-2.4835 giga hertz (GHz) with effective radiated power up to 4 watts and indoor use of low-power equipment in the frequency bands 5.150-5.350 GHz and 5.725-5.875 GHz.

SWISS ARISS SCHOOL CONTACT SCHEDULED

International Space Station Expedition 11's sixth ARISS school
contact will be with students at the Zurich International School,
Horgen, Switzerland on Friday, 10 June 2005. The event is scheduled
to begin at approximately 09:10 UTC.

This contact will be direct between stations NA1SS and HB9ZIS, the
school's amateur radio club. It should be audible to anyone in
central and southern Europe listening in on the 145.800 MHz downlink.
The participants will conduct the conversation in English. US
astronaut John Phillips, KE5DRY will answer the questions from the
students.

The Zurich International School (ZIS) is a day school for students
from pre-school at age 3 to graduation at age 18. ZIS has more than
900 students located at four separate campuses in the Zurich area.
The attendees come from countries around the world and primarily
from expatriate families.

Students will ask as many of the following questions as time allows:

1. Have you seen any objects from previous space projects, and are
they dangerous?
2. How do you astronauts deal with the loneliness that you face in
space?
3. What is the most important experiment on your mission?
4. Do you have Internet access on the ISS?

5. What is the hardest thing to do in space that is easy on Earth?
6. What happens if you get seriously ill and there's no doctor?
7. How do you control the orbit of the space station?
8. Which planet would you like to visit and why?
9. Does the change of gravity affect your appetite?
10. How is the ISS protected against small particles such as dust
from meteorites?
11. Can you see any phenomena caused by cosmic radiation?
12. What sort of living organisms have you worked with in space?
13. What do you find the hardest thing about living in zero gravity?
14. How does your family deal with your travels?
15. Do cell phones work from space?
16. What do you astronauts miss most about Earth?
17. How much does the moon's gravity affect the space station's orbit?
18. What kinds of experiments do you do in space that you can't do on
Earth?
19. What is the first thing you plan on doing when you get back to
Earth?
20. What has been your most interesting experiment you have done so
far?

Interested parties are invited to listen to the downlink on
145.800MHz FM.

Gaston Bertels, ON4WF
ARISS-Europe chairman

2387. Growing India... off topic

Yahoo group: m_a_r_s
Date: 2005-06-24 14:26:23 UTC
From: Huzefa Merchant VU2HIT
Topic: 2387 Message: 2387

THEY MISSED OUT SOMETHING IN THE BELOW ARTICLE..... THINK
Growing India

The information below about India was given in Pakistan magazine "The News International".

* World's 5 largest car companies are procuring their spare parts from India. In 2002, the export was Rs.1700 crores and it quadrupled in 2003 to Rs.7000 crores. In the next 5 years this will cross Rs.70,000 crores.

* India's HERO HONDA is the world largest Motorcycle manufacturing company. It manufactures 17 lakhs motorcycles per year.

* England's popular Rover car company is going to manufacture TATA INDICA the Indian technology car at the rate of 1 lakh car per year.

* "BHARAT FORGE" had emerged as the largest forging company in the world and supplies its products to world popular companies like Volvo, Toyota, Honda etc.

* "ASIAN PAINTS" an Indian paint company has its Manufacturing plants in 22 countries across 5 continents and is the market leader in 11 countries.

* "HINDUSTAN INKS" an Indian ink manufacturing company is producing world largest 1 lakh ton Ink per annum with its manufacturing branches at Europe & America.

* "Escelfbopack" an Indian Company has manufacturing plants in 11 countries and World's 25 %, Pastes and medicines are packed in their product.

* Many Indian Industries keeps getting world popular awards.

* The Popular Austin car company have given order to an Indian company for new designs.

* Multinational car companies like Suzuki, Hyundai & Ford have started exporting their cars from India and by 2010, they will export around 5 lakhs car from India.

* Indian Medicine sector manufactures products worth Rs.30,000 crores per year out of which Rs.10,000 crores are exported.

* Due to better performance of Indian Industrial sector their share in Indian market has raised from 25 to 65% where as the multinationals share reduced from 75 to 35%.

* Indian Herbal business grown to Rs.4,000 crore per annum.

* India contributes 20% of world's textile manufacturing.

* India has proudly established its own Super Computer where as the other Super computer established countries are only America & Japan.

* India is one among the 6 countries, which can build and launch Satellites. Even technologically advanced countries like Germany & Belgium are yet to do that.

* Due to Insat Organization, India had become a very big national satellite network country in the World.

* 9 out of 10 Diamonds in the world are cut & polished in India being the no.1 Diamond works country in world.

* India & China's business has grown to 104% with in a year.

* India's foreign reserve had raised from 82 billion US$ to 118 billion US$.

* India had returned back the IMF loan before the due date and started funding other countries.

* Indian software is perfect but just 1/10th of the world prize.

* India provides software to 7 out of 10 largest CD-ROM manufactures in the world.

* India spends only Rs.70,000 for producing a MBA whereas in America the expense is Rs.54 Lakhs.

* The Eye Cataract operation in India costs only Rs.600 where as in America Rs.7000.

* A Heart surgery in India costs only Rs.40,000 where as in America it is Rs. 6 lakhs.

* The R&D expense to make a car in America is Rs.4,500 crores whereas in India in half of its expense the R&D is done with same perfection.

* More than 70 multinational companies have established their R&D centres in India.

* Indian telephone & Internet network expanding by crore in numbers.

* 100 out of Fortune 500 companies have come to India to do business while only 33 have gone to China.

* So, India is making jumping progress in the World's market, which is ranging from Brazil to China,

According to the report, these developments have not come to India in a day or by luck. In India also same situations of Pakistan exists like Dirty politics, Corruption, arrogant officials, poor infrastructure etc. But still India keeps growing every day and nobody can deny the fact. This happens
because the Indian people are not just seeing the dirty problems around them but they also see the confidence star on the sky, the growth opportunity and working for it with self motivation having a target for progress .

2388. Radio Taxi QRM

Yahoo group: m_a_r_s
Date: 2005-06-25 05:49:16 UTC
From: vu2scq
Topic: 2388 Message: 2388

Dear Friends,

Today I read in the Indian Express that a new Radio Taxi Service is coming to mumbai with about a 100 taxis. Read more here http://cities.expressindia.com/fullstory.php?newsid=136207

This is New Delhi based company and it seems that this company already has created some bad blood with our fellow hams there.

From what I understand from the CQ_VU and VUHAMS egroups is that the radio taxi operators were using the Echolink repeater in Delhi for their own commercial use, which has already created some major QRM there.

I personally do not really know the whole story but it would be a good idea if we guys in Mumbai look into this matter and try and analyse the impact it could have on our local 2m.

Can anyone shed some more light on this topic? I would be interested to safeguard our city from this invasion.

Hi All,

its been almost more than 7-8 months, the MARS 2003 batch is following up for their Identity Cards & Call Sign Caps.

Seems none of MARS 2003 batch students who are now valid callsign holders & are also life members of the society, have received their ID cards and Callsign Caps.

Humble request to all concerned to take this up on priority and issue ID and callsign caps.

Stampsize photographs and relevant documents are already provided.

Topic: 2394 Message: 2394

Jack St.Clair Kilby ex-W9GTY

There are few men whose insights and professional accomplishments have changed the world. Jack Kilby is one of these men. His invention of the monolithic integrated circuit - the microchip - some 45 years ago at Texas Instruments (TI) laid the conceptual and technical foundation for the entire field of modern microelectronics. It was this breakthrough that made possible the sophisticated high-speed computers and large-capacity semiconductor memories of today's information age.
Mr. Kilby grew up in Great Bend, Kansas. With B.S. and M.S. degrees in electrical engineering from the Universities of Illinois and Wisconsin respectively, he began his career in 1947 with the Centralab Division of Globe Union Inc. in Milwaukee, developing ceramic-base, silk-screen circuits for consumer electronic products.
In 1958, he joined TI in Dallas. During the summer of that year working with borrowed and improvised equipment, he conceived and built the first electronic circuit in which all of the components, both active and passive, were fabricated in a single piece of semiconductor material half the size of a paper clip. The successful laboratory demonstration of that first simple microchip on September 12, 1958, made history.
Jack Kilby went on to pioneer military, industrial, and commercial applications of microchip technology. He headed teams that built both the first military system and the first computer incorporating integrated circuits. He later co-invented both the hand-held calculator and the thermal printer that was used in portable data terminals.
In 1970, he took a leave of absence from TI to work as an independent inventor. He explored, among other subjects, the use of silicon technology for generating electrical power from sunlight. From 1978 to 1984, he held the position of Distinguished Professor of Electrical Engineering at Texas A&M University.
Mr. Kilby officially retired from TI in the 1980s, but he has maintained a significant involvement with the company that continues to this day.
Jack Kilby is the recipient of two of the nation's most prestigious honors in science and engineering. In 1970, in a White House ceremony, he received the National Medal of Science. In 1982, he was inducted into the National Inventors Hall of Fame, taking his place alongside Henry Ford, Thomas Edison, and the Wright Brothers in the annals of American innovation.

Mr. Kilby holds over 60 U.S. patents. He is a Fellow of the Institute of Electrical and Electronics Engineers (IEEE) and a member of the National Academy of Engineering (NAE). He has been awarded the Franklin Institute's Stuart Ballantine Medal, the NAE's Vladimir Zworykin Award, the American Society of Mechanical Engineers' Holley Medal, the IEEE's Medal of Honor, the Charles Stark Draper Prize administered by the NAE, the Cledo Brunetti Award, and the David Sarnoff Award. On the 30th anniversary of the invention of the integrated circuit, the Governor of Texas dedicated an official Texas historical marker near the site of the TI laboratory where Mr. Kilby did his work.
In 2000, Jack Kilby was awarded the Nobel Prize in Physics for his part in the invention of the integrated circuit.

From Jack Kilby's first simple circuit has grown a worldwide integrated circuit market whose sales in 2004 totaled $179 billion. These components supported a 2004 worldwide

electronic end-equipment market of $1,186 billion. Such is the power of one idea to change the world.

The vanity call sign W9GTY is today held by the J. S. Kilby Digital Millenium, based at the US Naval Postgraduate School, Monterey, California.

2395. When's the next MARS meet ?

Yahoo group: m_a_r_s
Date: 2005-06-26 06:21:16 UTC
From: Sriram N
Topic: 2395 Message: 2395

Hi all:

I've been pretty busy the past few months, and after being diagnosed with some problem with my brain temporal lobe caused due to stress, I've started to take time off to smell the flowers.

When's the next MARS meet ? I'd love to travel to Mumbai and attend.

2396. What's the usual agenda for a HAM User Group meet ?

Yahoo group: m_a_r_s
Date: 2005-06-26 06:37:05 UTC
From: Sriram N
Topic: 2396 Message: 2396

All:

Since I've only attended one meet till date, I'm not quite sure what really happens at a meet.

I happen to be co-moderator for Nashik's Linux User Group. Linux is the core of an operating system, similar to Windows. a Linux User Group is a group of people who use Linux or are just interested in it. This is similar to how MARS is a group of people who're HAMs, or folks like myself who're waiting for their callsigns.

Here's what we do at a Linux User Group meet:

1. Inform all newbies well in advance of a meet.

2. Arrange with some newbies to travel to the meet with them. Some folks are shy, so we experienced folks travel with them to the venue so that they're already in the mood to meet other experienced people as well.

3. Talk on new stuff that we've all tried.

4. Ask questions on problems that we'd faced and solved, and for ideas on alternative solutions.

5. Arrange for an install fest. Some newbie gets along her or his computer, and we help install Linux onto that computer.

During such User Group meets, we try to ensure that things move along even if experienced folk are not around. This helps keep personal identities separate from that of the user group.

Here's what I'd expect from a MARS meet:
1. Newbies talk about their teething troubles with setting up antennae, or tuning their new radios.

2. Those interested in reviving their Morse skills (such as myself) ask experienced folk to demonstrate MORSE based communication. This would infuse enthusiasm to practise again.

3. Discuss the theory behind the Fox used in Fox hunts, and how a fox is assembled. Ask a team of three newbies to assemble a 'Fox' on the spot.

4. Talk about license and legal issues. E.g. What problems does one face when carrying a handy aboard an aircraft? What does the law expect from one ?

5. Demonstrate the repeater in action.

Looking forward to renewed MARS activity.

-- Sriram

Subject: [m_a_r_s] MARS ID & CallSign Cap

Hi All,

its been almost more than 7-8 months, the MARS 2003 batch is following up for their Identity Cards & Call Sign Caps.

Seems none of MARS 2003 batch students who are now valid callsign holders & are also life members of the society, have received their ID cards and Callsign Caps.

Humble request to all concerned to take this up on priority and issue ID and callsign caps.

Stampsize photographs and relevant documents are already provided.

1.05.2004
New Managing Committee Elected - Pankaj (VU2RIO), Kapil (VU2MIG), Anish (VU2OZO), Mehul - Secretary (VU2ICQ), Huzefa - Chairman (VU2HIT), Prashant - Treasurer (VU2CBU) and Arun (VU3AUA)

24.05.2004
South Mumbai & Andheri Repeater goes on AIR

15.07.2004 to 23.07.2004
MARS ARES team headed by NILESH RATHOD - VU2NLF with VU2UGO, VU3AUA, VU2IZO and VU2OZO helped in Bihar Flash Flood

18.07.2004
Varsha Marathon at Thane with VU2CBU VU2NFS VU2MUF VU2SFN VU2IES VU2CFO VU2GBI VU3MWH VU2GYM VU2PPE VU2KDM VU2JPN

10.08.2004
Huzefa Merchant resigned from his services (as chairman). His resignation has been accepted.

12.08.2004
Mehul Chovatia qsyed to Signapore and resigned from Secretary's post as well as MC post

21.08.2004
Consequent to the resignation of VU2ICQ, the Managing Committee unanimously decided to co-opt OM Nilesh Rathod,VU2NLF, as Secretary with immediate effect, Decision about appointing new Chairman was promised very soon.

16.09.2004
Repeater shifts to Prithvi Apartment one of the best site in Mumbai.

26.09.2004
Public Service - Ganesh Visarjan (email report by MIG 02.10.2004)

16-17.10.2004
JOTA (email report by UGO 19.11.2004)

24-25-26.12.2004
HAMFEST INDIA 2004

14.01.2005
Managing Committee decided to put VU2AXN, VU2TAL,VU2KDM,VU2IES on temperory suspension and IZO Expelled.

28-29-30.01.2005
Simulated Excercise for Disaster Communication (email report by EGO 01.02.2005)

26-27.02.2005
Fox Hunt (email report by ZRS 13.03.2005)

? 01.05.2005 (It was AGM day for last 4 years)
? Its almost 2 months now but nothing happened so far abt any of the
following:
? 5th Annual General Meeting?
? Audited Accounts Statements?
? Annual Report?

I hope the Managing Committee who has managed the affairs of MARS
so well throughout the year 2004-05, will also look into this!

Yahoo group: m_a_r_s
Date: 2005-06-29 16:18:10 UTC
From: sarla sharma
Topic: 2398 Message: 2403

Hello all,
I am right now in Seattle(USA) for about 3 days before I leave for Alaska for about 7 days on a cruise. I would be back in India in September. I will be in Austin Texas for most of the time, but plan to visit my YL friends in Denver and Montana in August. Of course, everywhere there is this wonderful world of internet connectivity!!!!
I hope before I return,that the AGM will be held. I agree with UGO that too much has been in limbo and things need to be tackled head on. Whatever it is, achievements, mistakes, fights, need to come out in the open and only then would things move. We would be all the more wiser if we settled the issues in the best way possible and quickly. Letting things drift, takes us further away from solutions.
I am sure the Managing Committee have already started to think.
Take care and PEACE!!!!
Sarla

Subject: [tara1] Icom IC 7000 (new version of 706 mk2 G)

New search
Products index Back

HF/VHF/UHF all mode base and mobile transceiver with double DSP
Mod. Icom IC-7000 #02 EUR Code 5-723-645 ? 1.682,80 (+ VAT)

For base & mobile use
Icom IC-7000 #02 EUR
HF/VHF/UHF ALL MODE TRANSCEIVER

2 x DSP
That's two times the DSP in the
IC-7000 that will leave many base station rigs in the noise! While it is too early to list all the great features, here are a few to keep you talking!.

Improved AGO loop performance
With Multiple AGC loops, you will never experience AGC pumping from a signal filtered out by the DSP! The digital IF filter and manual notch filter are included in the AGC loop, so you will never encounter AGC blocking. As with the 756PROIII and IC-7800, the AGC time constants are adjustable for slow, middle, fast for each operating mode.

Digital IF filters
All the filters you want at your fingertips! You will never have to purchase "Optional" filters as the IC-7000 has 41 different filter widths.
You just dial in the width you want and select whether you want a sharp or soft filter shape for SSB and CW modes. Then to pull-in the weak ones, a quick turn of the concentric twin PBT knobs, allow you to either narrow the IF pass band, or shift the entire pass band to eliminate the QRM.

2 x MNF (Manual Notch Filter)
Pull out the weak signals in crowded band conditions with Icom's NEW two-point MNF manual notch filter.
Apply 70 dB of rejection to two signals at once! Notch width is adjustable - wide, medium, and narrow - and an auto-tuning notch filter is available, too.

Digital voice recorder (DVR)
Record your callsign, CQ, or other information in 4 transmit playback memories with alphanumeric labels. A total of 90 seconds is available for the four memories. A front panel REC control allows you to record incoming signals, too! The DVR makes portable contesting or mini-expeditions a breeze!

Flexible installation with detachable panel
Smaller than the IC-706MKIIG, the IC-7000 measures only 167(W)x58(H)x180(D) mm. With the detachable front panel*2 many installation possibilities are available.

Remote control Microphone
The supplied HM-151 remote control microphone allows you to control often used functions of the IC-7000. This includes band hopping with Icom's Triple Band Stack registers.

2-mode band scope
The band scope function lets you watch conditions around the band.
In Center mode the band scope is centered on the receiving frequency.
In Fixed mode the band scope sweeps a fixed range.

D2.5-inch color TFT display with TV screen receive capability
The IC-7000's display presents numbers and indicators in bright, concentrated colors for easy recognition. You can choose from 3 background colors and 2 font styles to suit your preference. Not only does the display provide radio status, but you can watch NTSC M or PAL B on VHF-TV channels.

One-touch operation
Eight of the most-used radio functions are controlled by dedicated function keys grouped around the display for easy visibility. One quick touch turns the function and off. A longer touch activates adjustment of the function's setting.

Memory Keyer
The internal memory keyer provides 4 memories for station information or contest exchanges, calling CQ and call sign with up to 55 characters for each memory. The keyer also performs automatic repeat, automatic contest serial numbers, and "cut-numbers".

Other features

a.. Control circuit for optional antenna tuners
b.. Built-in voice synthesizer
c.. CI-V control capability
d.. Auto repeater functions
e.. Total of 503 channels
f.. Quick band change
g.. Multi-function S/PWR/SWR meter
h.. Backlit buttons
i.. 24-hour Clock
Receiver

a.. Preamp
b.. Attenuator
c.. 100-step digital noise blanker
d.. 16-step digital noise reduction
e.. RIT
f.. CTCSS, DTCS tone squelch
Transmitter

a.. ±0.5 ppm high frequency stability
b.. Continuously adjustable RF output power
c.. Digital RF speech compressor

d.. Powerful 35W on 70cm band
e.. Bass and treble audio equalizer
f.. Adjustable SSB transmit bandwidth
g.. DTMF memory
h.. ÄTX
i.. VOX (CW)
j.. Full break-in
k.. CW reverse sideband
l.. Adjustable CW pitch
Supplied with Hand microphone, DC power cable, Spare fuses, Key plug, Electronic keyer plug, ACC cable and instruction manual.

ACCESSORIES
IC-PW1 EURO 1kW Linear Amplifier
SP-10 Mobile speaker 4 Ohm, 5W
SM-20 Base microphone with up/down buttons (OPC-589 cable is required)
AH-4 Automatic antenna tuner
AT-180 Automatic antenna tuner 1.8 a 51 MHz - 120W
AH-2b HF mobile whip antenna 7~54 MHz
OPC-1443 Front panel separation cable - 3.5 m
OPC-1444 Front panel separation cable - 5 m
OPC-598 Connection cable for AT-180 automatic antenna tuner, 7m
OPC-589 Adapter cable for 8-pin base microphone
OPC-599 adapter cable (13 pin to 7 and 8 pin ACC socket)
OPC-742 ACC 13 PIN CABLE FOR AT-180 WITH 2 m/70 cm LINEAR AMPLIFIER
CT-17 CI-V level converter
MB-62 Mobile mounting bracket
MB-105 Front panel mounting bracket - mobile use
MB-65 Adjustable mobile mounting bracket (within MB-63)
MB-106 Carrying handle

Specifications HF/VHF/UHF all mode base and mobile transceiver with double DSP

SPECIFICATIONS
GENERAL Frequency coverage: RX: 0.030 kHz ~ 199.999 MHz
400.000 ~ 470.000 MHz
TX: 1.800 ~ 1.999 MHz
3.500 ~ 3.999 MHz
7.000 ~ 7.300 MHz
10.100 ~ 10.150 MHz
14.000 ~ 14.350 MHz
18.068 ~ 18.168 MHz
21.000 ~ 21.450 MHz
24.890 ~ 24.990 MHz
28.000 ~ 29.700 MHz
50.000 ~ 54.000 MHz
144.000 ~ 148.000 MHz
430.000 ~ 450.000 MHz

Mode: USB, LSB, CW, RTTY, AM, FM, WFM, PSK31
No. of memory channels: 503 (495 regular, 2 call, 6 scan edges)
Antenna impedance: 50 ohm
Antenna connectors: 2 x SO-239
Power supply: 13.8 VDC ±15%
Current drain: RX: Stand-by 1.3A
Max. audio 1.6A

TX: 22A max

Frequency stability: < ±0.5 ppm (0°C to +50°C)
Operating temperature: -10°C to +60°C
Dimension: 167 (L) x 58 (H) x 180 (P) mm
Weight: 2.3 kg

TRANSMITTER Output power: SSB/CW/
RTTY/FM 2 to 100W (HF/50 MHz)
2 to 50W (144 MHz)
2 to 35W (430 MHz)
AM 1 to 40W (HF/50 MHz)
2 to 20W (144 MHz)
2 to 14W (430 MHz)

Spurious emissions: < -50 dB (below 30 MHz)
< -60 dB (above 50 MHz)
Carrier suppression: > 50 dB
Unwanted sideband suppression: > 50 dB

RECEIVER Intermediate frequencies: SSB/CW/
AM/FM 1^: 124.487 MHz
2^: 455 kHz
3^: 16.15 kHz
WFM 1^: 134.732 MHz
2^: 10.700 MHz

Sensitivity:
(preamplifier on, except 4~4.5 and 8~9 MHz) SSB/CW 0.15µV (1.8~29.9 MHz)
0.12µV (50~54 MHz)
0.11µV (144~440 MHz)
AM 4.0µV (0.5~1.8 MHz)
2µV (1.8~29.9 MHz)
1µV (50~54 MHz)
1µV (144~440 MHz)
FM 0.5µV (28.0~29.99 MHz)
0.32µV (50~54 MHz)
0.18µV (144~440 MHz)
WFM 10.0µV (76~108 MHz)

Squelch sensitivity:
(preamp. on) SSB < 5.6 µV
FM < 0.3µV

Selectivity: SSB
(BW:2.4kHz) >2.4 kHz (-6 dB)
<3.9 kHz (-60 dB)
CW
(BW:500Hz) >500 Hz (-6 dB)
<900 Hz (-60 dB)
RTTY
(BW: 350Hz) >360 Hz (-6 dB)
<650 Hz (-60 dB)
AM
(BW:6kHz) >6.0 kHz (-6 dB)
<12 kHz (-60 dB)
FM
(BW:15kHz) >12 kHz (-6 dB)
<20 kHz (-60 dB)

Spurious and image rejection ratio: > 70 dB (bande HF)
> 65 dB (50/144/440 MHz)
Audio output power: >2.0W on 8 Ohm with 10% d.a.t.

Hi,

Zyros Uncle can't count.
He forgot this nephew too

:-)

Dear Zyros,

I'm very much eager to join you all HAMs on the air.

However currently spending quite a lot of time in
office itself, so couldn't join the net yet.

My experiments on digital HAM communication continue
with VU2UGO in the meanwhile :-)

Cheers,

Nilesh

2411. MARS goings on, does anybody know???

Yahoo group: m_a_r_s
Date: 2005-07-06 18:25:05 UTC
From: V U 2 C D P
Topic: 2411 Message: 2411

Hi all,

I have a few things to say as a MARS member for I feel the silence on the e-group is really disturbing. The new managing committee is yet to be elected because of a series of unfortunate events which have resulted in a mess that has affected the society's functioning. Some details though need to be provided by those responsible as there hasn't been any mail from the committee members. What surprises me is the fact that even the MARS M.C. members have hardly posted anything on the e-group. Barring NLF and HIT(during his short stint as President) there were no postings on the group. How many M.C. members remain on the committee is also not known after there were a string of resignations.

Cut to Hamfest. An event that could not live upto expectations simply because of poor participation from our ham fraternity. The event, personally, has left me very sour. I was thrilled to be the raffle winner(remember it was an ICOM 706 MkII G). The joy was shortlived as the rig kept on display belonged to VU2CFO and therefore was returned to him immediately after the Hamfest closing ceremony. Not that I was keen to hand it back but did so an assurance that a new rig would be given within a month's time. Six months have already passed and I still get paid lip service upon asking for it. A certain Hamfest M.C. member even had the nerve to bluntly say that I will never get it. If that be true then the whole thing was nothing but a scam. I feel cheated and believe that the individuals involved owe an explanation for playing such a prank on all those who purchased raffle tickets.

The only explanation I have been offered is that the Hamfest accounts need to be closed and many things need to be sorted out. How many months that is going to take is something I don't want to guess. Two M.C. members are at loggerheads over the "unconstitutional behaviour" of one of them and his subsequent expulsion from the society. Sadly, the key responsibilites are jointly held by them. To end the impasse is upto them.

Personally though my patience has been tested to the last 'e'. As a MARS member I demand to see the account books(constitutionally I am within my rights to do so).

AND I AM NOT GIVING UP ON THAT RIG.

That's for the record.

A none too amused,

VU2CDP.

2418. Is there Meeting on 10th July?

Yahoo group: m_a_r_s
Date: 2005-07-09 09:18:13 UTC
From: vu2kiz
Topic: 2418 Message: 2418

I am in Mumbai and would like to attend the Montly Meeting with some of my friends for the first time after being the Life Member from almost beginning. Can the responsible person inform me whether there will be meeting at 1000 Hrs tomorrow Sunday 10th July at the B. S. Bengalee High School or not? I tried to call some of the numbers given at the MARS website without avail. I am staying in Room 509 Ph D Hostel of the Tata Institute of Social Sciences, Deonar, Mumbai 400 088 Phone: 2556 3290 Ext. 604 0900 to 2000 Hrs Mon to Sat and 2556 3294 from 2000 to 0900 Hrs Mon to Sat and on Sun. I am in Mumbai for a month. I came after doing exploratory research on tsunami affected areas of India and Sri Lanka. I also presented a paper at the Dayton Hamvention 2005 on May 20, 2005. I would like to have eyeball, if it is possible. Please reply by phone or on my email: kailash.gupta@...

2419. Status of MARS

Yahoo group: m_a_r_s
Date: 2005-07-09 10:15:23 UTC
From: nilesh rathod
Topic: 2415 Message: 2419

Dear SXF and MARS members,

I find it very strange when you guys show concern for the society but NEVER come forward to chip in for the cause, VU2SXF has never contributed to the society even when he was on the commitee, he rarely even showed up for the M.C meetings.

As a matter of fact, most of the people on all the managing commitees (past & present) have shown very little interest.. We have always had to convience people to run for election.. Last year we didn't even have elections.. we barely got 7 people to fill the chairs.

Then again unfortunately Mehul (Ex-secretary) QSYed to Singapore and our chairman VU2HIT could not handle the pressure and resigned... In view of the situation, and Hamfest 2004 approching I once again took charge as the Secretary.. Inspite of the work pressure of Hamfest 2004. I requested few capable members to take charge of chairman, but none came forward.. till today the chair of the chairman of MARS is still empty..

MARS members went to Gujarat Hamfest 2003 and bidded for hamfest 2004, we got the bid "GANPATI BAPPA MORYE" was the slogan used by MARS members. Unfortunately when it came to doing hamfest, most of these people dissappeared..

We managed to do the Hamfest thanks to the SWLs and few loyal members of MARS..most of the founder members did not come for Hamfest, forget contibuting their efforts...

When we were doing Hamfest, very few members came forward to help us with the fund collections, it was mainly the efforts of VU2IZO, VU2CFO, VU2YJM, VU2PYG and few loyal members that we were able to do the Hamfest.. I am eternally grateful to them...

For past six months there is no monthly meeting... is anybody bothered ? is it only when NLF calls for the meeting that people have to come ? Even when we used to have regular meeting, how many M.C members, founder members attended the meetings ? Do they care. ?

I have stopped calling for meetings, as I was out of India for last 2 months and I have QSYed to Pune, I see nobody is interested and it is pointless for me to run from Pune to Mumbai, when Mumbaities are not interested ?

even during the JNA days, (if founder members remember) we use to have informal meeting, in absence of the office bearers, why is it that MARS members don't even meet for informal meetings. ?

As far as the AGM is concerned, we have to finalize the accounts first, The accounts have to be submitted by the treasurer of Hamfest (VU2IZO) and By treasurer of MARS (VU2CBU).. My job is to scrutinize the accounts and do a internal audit (which I have been doing for past 5 years). after the accounts are scrutized by me, they will be submited to our Auditors, once our auditors have OKed the accounts, they will be sealed and signed by the office bearers.
and we can conduct the AGM.

Usually, Mehul (VU2ICQ) and VU2NLF use to help out the Treasurer to sort out the accounts, unfortunately VU2ICQ is in Singapore and VU2NLF is in Pune. therefore both the treasurer (VU2IZO & VU2CBU) are in a fix.. VU2SFN was kind enough to atleast help out VU2IZO in computerizing the Hamfest accounts.

I have requested many concerned MARS members to come forward and assist both the Treasurer to complete the accounts, but so far no one has come forward.

As far as VU2CDP's RIG is concern, I have repeatedly told him, that once the accounts are finalized, we will make sure that he gets it.. Hamfest 2004 was MARS event, if Hamfest accounts does not have money, then MARS will pay for it. If MARS does not have money, then too bad...

Now people talk about cheating and fraud, when they don't know any facts about the issue... VU2CDP want his rig, that fair no doubt.. he should get it, but what about his loyalty towards MARS, has he renewed his membership ? he has not, I know for a fact ? You want MARS to GIVE YOU, but you don't what to GIVE to MARS, is it fair.. everyone know we are short of funds, but how many have come forward to contribute...

Start collecting fees and we will enough money to give VU2CDP his rig... but are members or M.C members willing to collect ? are members willing to pay ?

Classes is the major source of income for MARS, I had personally requested VU2IZO not to start classes in TARA (before he was expelled from the society) stating this will directly affect MARS financial status. But as he had already given press releases, without the consent of MARS M.C, he went ahead and started his classes in TARA. (which added the reasons to expell him)

MARS could still start their Churchgate Batches and generate income, but the question is who will do it, In our last batches VU2CBU took charge as the head of the education commitee, and finally VU2NLF ended up doing the classes, Is anyone willing to take up this responsibility and run the classes ?

Most of the members just want to make QRM and nothing else... I have spoken to many concern members who have been complaining about the AGM.. I have requested and suggested to atleast get 7 People for the next commitee ? What is the point when at the end of the day, we don't even get 7 people to run the society of 240 odds members..

It is very easy to start QRM and critisize, but when it comes doing something for the society it is a different ball game altogether...

I sincerely suggest and appeal to all members concerned, and who are willing to come on the next managing commitee, especially the would be Treasurer of 2005-2006 to come forward and help VU2IZO and VU2CBU to finalize the accounts. In any event his financial term has already started on 1st April 2005, now it merely a formalitity, if you are so sincere to MARS and would like to somethings for the society, start now, don't wait for elections..

I have kept silence for past few months, that does not mean I don't care, but because I don't want QRM, specially from people, who will not do anything to sort out the problems...

So I once again request all members like VU2SXF to stop BITCHING and start WORKING....show us that you are really concerned and do something for your society... especially the FOUNDER MEMBERS..

Also I request members NOT to reply to mail and increase QRM, instead start working silently please...

73
VU2NLF,
Secretary MARS

sandesh chandrakant kamat <VU2SXF@...> wrote:

Dear Friends
Iam not a regular contributer to the mars group.Few days back vu2ugo had send a mail to this group but there was just one mail received.
Iam one of the founder member of mars & also proud that our society did so well within a short span of 3 yrs. I fail to understand as what has happened to our societies activities suddenly .I am aware that Nilesh our EX Secretary is also not around,no AGM for the last year, no meeting, no mails,accounts pending , hamfest accounts pending , Nilesh is not interested anymore in MARS he is after to earn his piece of bread now,not even bothered to reply to anyones mails nor phone calls,the mananging commitee is silent,the founder members are not keen on keeping things going ,no one interested to know as what is the status of our society,no one to come forward to arrange for meeting.Well we all know as how much efforts we all have put in to form our very own MARS & now suddenly just because Nilesh has left, everything comes to standstill? does it mean that mars was run by nilesh only? & others were obeying his orders.
I am also aware that the book of accounts are with Nilesh & he is abscounding nor is he bothered to atleast hand over the books to the M.C.
Regarding Deepak VU2CDP I agree that this is clear cheating on part of hamfest commitee,everyone is aware that he won ICOM 706 but till date he didnot receive it so wheres the raffle money gone?
if its there deepak should receive his rig.
Now in such a scenario the M.C should hold a special general body meeting & try to resolve the matters at the earliest so that the society can function. I think atleast this thing can be done .
I would also request the last M.C to decide & call the general body meeting at the earliest
Iam not really pleased to write this mail. I just want to see MARS LIVE FOR MANY MARE YEARS TO COME.
Now iam also awating the reply specially from M.C & FOUNDER MEMEBERS ATLEAST.

THANKS & 73
DE
SANDESH KAMAT

dear sriram

well wish you come for the 17th sunday "eyeball get together" at AVIJAH BUILDING , METRO

at 10 am

we all love HAM as a hobby and that what keeps us together . The LOVE for it (ham radio)

there are diffrences every where and will get cleared for the '"LOVE OF HAM RADIO "

WELL TAKE CARE AND SEE YOU SOME TIME

73"S

VU2ZRS

wish you could come also

2435. Space Shuttle Discovery's Launch (STS-114) Countdown Begins July 10

Yahoo group: m_a_r_s
Date: 2005-07-12 08:35:48 UTC
From: VU2UGO
Topic: 2435 Message: 2435

Space Shuttle Discovery's Launch Countdown Begins July 10

NASA will begin the official countdown for the Return to Flight launch of Space Shuttle Discovery on mission STS-114 July 10 at 6 p.m. EDT. Discovery's seven-member crew will test new equipment and procedures to increase the safety of the Shuttle and deliver spare parts, water and supplies to the International Space Station.

NASA's Kennedy Space Center (KSC) launch team will conduct the countdown from Firing Room 3 of the Launch Control Center. The countdown includes nearly 27 hours of built-in hold time leading to a preferred launch time at about 3:51 p.m. on July 13 with a launch window extending about five minutes.

This historic mission is the 114th Space Shuttle flight and the 17th U.S. flight to the International Space Station. STS-114 is scheduled to last about 12 days with a planned KSC landing at about 11:01 a.m. EDT on July 25.

For the latest information on NASA's Return to Flight efforts, visit: http://www.nasa.gov/returntoflight

COUNTDOWN MILESTONES (all times are Eastern)

Launch-3 Days (Sunday, July 10)
Prepare for the start of the STS-114 launch countdown
Perform the call-to-stations (5:30 p.m.)
Countdown begins at the T-43 hour mark (6 p.m.)
Begin final vehicle and facility close-outs for launch
Check out backup flight systems
Review flight software stored in mass memory units and display systems
Load backup flight system software into Discovery's general purpose computers

Launch-2 Days (Monday, July 11)
Remove mid-deck and flight-deck platforms (2 a.m.)
Complete preparation to load power reactant storage and distribution system (5 a.m.)
Activate and test navigational systems (7 a.m.)
Flight deck preliminary inspections complete (10 a.m.)
Enter first built-in hold at T-27 hours for duration of four hours (10 a.m.)
Clear launch pad of all non-essential personnel
Perform test of the vehicle's pyrotechnic initiator controllers
Resume countdown (2 p.m.)
Begin loading of cryogenic reactants into Discovery's fuel cell storage tanks (3:30 p.m.)
Enter 4-hour built-in hold at T-19 hours (10 p.m.)
Demate orbiter mid-body umbilical unit (10:30 p.m.)

Resume orbiter and ground support equipment close-outs

Launch-1 Day (Tuesday, July 12)
Resume countdown (2 a.m.)
Final preparations of Shuttle's three main engines for tanking and flight (2 a.m.)
Begin filling pad sound suppression system water tank (3 a.m.)
Pad sound suppression system water tank filling complete (6 a.m.)
Close out the tail service masts on the mobile launcher platform
Enter planned hold at T-11 hours for 12 hours, 55 minutes (10 a.m.)
Begin star tracker functional checks (10:50 a.m.)
Activate Shuttle's inertial measurement units
Activate the orbiter's communications systems
Install film in numerous cameras on the launch pad (11:55 a.m.)
Flight crew equipment late stow (2:50 p.m.)
Move Rotating Service Structure (RSS) to the park position (7 p.m.)
Perform ascent switch list
Fuel cell flow-through purge complete
Resume countdown at T-11 hours (11 p.m.)

Launch Day (Wednesday, July 13)
Activate the orbiter's fuel cells (12:05 a.m.)
Clear the blast danger area of all non-essential personnel
Switch Discovery's purge air to gaseous nitrogen (1:10 a.m.)
Enter planned 2-hour built-in hold at the T-6 hour mark (3:55 a.m.)
Verification of launch commit criteria prior to cryogenic loading of External Tank (ET)
Clear pad of all personnel
Resume countdown (5:55 a.m.)
Chill-down of propellant transfer lines (5:55 a.m.)
Begin loading the ET with 500,000 gallons of cryogenic propellants (approx. 6:05 a.m.)
Complete filling the ET with propellants (approx. 8:55 a.m.)
Final Inspection Team proceed to launch pad
Enter planned 3-hour built-in hold at T-3 hours (8:55 a.m.)
Perform inertial measurement unit preflight calibration
Align Merritt Island Launch Area (MILA) tracking antennas
Perform open loop test with Eastern Range
Resume countdown at T-3 hours (11:55 a.m.)
Crew departs Operations and Checkout Building for the pad (12 p.m.)
Complete close-out preparations in the white room
Check cockpit switch configurations
Flight crew begins entry into the orbiter (approx. 12:30 p.m.)
Astronauts perform air-to-ground voice checks with Launch and Mission Control
Begin to close Discovery's crew hatch (about 1:35 p.m.)
Begin Eastern Range final network open loop command checks
Perform hatch seal and cabin leak checks
Complete white room close-out
Close-out crew moves to fallback area
Primary ascent guidance data is transferred to the backup flight system

Enter planned 10-minute hold at T-20 minutes (2:35 p.m.)
NASA Test Director conducts final launch team briefings
Complete inertial measurement unit preflight alignments
Resume countdown at T-20 minutes (2:45 p.m.)
Transition the orbiter's onboard computers to launch configuration
Start fuel cell thermal conditioning
Close orbiter cabin vent valves
Transition backup flight system to launch configuration
Enter estimated 40-minute hold at T-9 minutes (2:56 p.m.)
Launch director, Mission Management Team and NASA test director conduct final polls for go/no go to launch
Resume countdown at T-9 minutes (about 3:36 p.m.)

Launch Day (Wednesday, July 13)
Start automatic ground launch sequencer (T-9:00 minutes)
Retract orbiter crew access arm (T-7:30)
Start mission recorders (T-6:15)
Start Auxiliary Power Units (T-5:00)
Arm Solid Rocket Boosters (SRBs) and ET range safety safe and arm devices (T-5:00)
Start liquid oxygen drainback (T-4:55)
Start orbiter aerosurface profile test (T-3:55)
Start main engine gimbal profile test (T-3:30)
Pressurize liquid oxygen tank (T-2:55)
Begin retraction of the gaseous oxygen vent arm (T-2:55)
Fuel cells to internal reactants (T-2:35)
Pressurize liquid hydrogen tank (T-1:57)
Deactivate bi-pod heaters (T-1:52)
Deactivate SRB joint heaters (T-1:00)
Orbiter transfers from ground to internal power (T-0:50 seconds)
Ground Launch Sequencer go for auto sequence start (T-0:31 seconds)
SRB gimbal profile (T-0:21 seconds)
Ignition of three Space Shuttle main engines (T-6.6 seconds)
SRB ignition and liftoff (T-0)

CREW FOR MISSION STS-114
Commander (CDR): Eileen Collins
Pilot (PLT): James Kelly
Payload Commander (MS1): Soichi Noguchi
Mission Specialist (MS2): Stephen Robinson
Mission Specialist (MS3): Andrew Thomas
Mission Specialist (MS4): Wendy Lawrence
Mission Specialist (MS5): Charles Camarda

SUMMARY OF STS-114 LAUNCH DAY CREW ACTIVITIES

Wednesday, July 13 (*Televised events-times may vary, but all times are EDT.)
5:45 a.m. Crew wakes up
6:15 a.m. Breakfast
*10:15 a.m. Crew eats snack

11:20 a.m. Weather Briefing (CDR, PLT, MS2)
*11:20 a.m. Don flight suits (MS1, MS3, MS4)
*11:30 a.m. Don flight suits (CDR, PLT, MS2)
*12:00 p.m. Depart for launch pad
*12:30 p.m. Arrive at white room and begin ingress
*1:45 p.m. Close crew hatch
*3:51 p.m. Launch

2436. PCSAT2/MISSE5 to Fly on STS-114

Yahoo group: m_a_r_s
Date: 2005-07-12 08:41:45 UTC
From: VU2UGO
Topic: 2436 Message: 2436

PCSAT2/MISSE5 to Fly on STS-114

As part of an educational outreach program, students at the United States Naval Academy, in collaboration with the DOD and ARISS, and under the direction of Bob Bruninga, WB4APR, designed and developed PCSAT2. This payload will be carried on a Materials International Space Station Experiment (MISSE5) on a Passive Experiment Container (PEC). The PEC (suitcase) will be opened and will carry DOD solar cells on the front side, facing the sun, and the back side will carry the amateur satellite communications system which will include Automatic Position Reporting System (APRS) Packet, FM voice repeater, and 10m PSK-31 transponder. The payload will be launched on the Return to Flight STS-114 mission, scheduled for July 13, 2005, and will be deployed via an EVA as an external payload on the ISS. This project is described in detail on Bruninga's website, "PCSAT2 - External ISS Experiment in the Amateur Satellite Service." See: http://www.ew.usna.edu/~bruninga/pcsat2.html

dear amit

whenever its a payment always remeber cross the cheque and write "zyrosz zend "(hahaha joking)

make the cheque in the name of "mumbai amateur radio society "

that will be a real positive step and outlook to the clubs image .

there will always be a MARS ,come rain ,thunder lightning or majority of the time SUNSHINE

Mars will be there so go ahead and make the cheque .

try to make it late also for the eyeball get together

From: vu2zrs
Topic: 2441 Message: 2442

dear anurag
get of at marine lines station and walk towards metro cinema
ask any one for kyani bakery , ask the owner on the counter
where "ceasar bar " is which is on the ground floor of Avijah Building
you should find it , 1st floor and you will see us.

if you dont find it still then you are at the wrong place call 911

2443. Re: [mars_academy_2003] Status of MARS

Yahoo group: m_a_r_s
Date: 2005-07-12 13:17:50 UTC
From: Prashant Koli
Topic: 2443 Message: 2443

Friends,

Now that we are meeting up for get-to-gether on the coming Sunday, we shall also know the status of our society (read status of our accounts).

There are many members who have opined that we should finalise MARS accounts without waiting for HAMFEST accounts.

As HAMFEST INDIA 2004 is not a society or trust, I believe, the HAMFEST account was opened as the event specific account in the ICICI Bank as "MARS A/C HAMFEST INDIA 2004". In that case, I feel that we should finalise accounts of the HAMFEST first and then only transfer the Profit/Loss to MARS a/c.

There are some payments to be made from Hamfest a/c, e.g.payment to photographer,towards printing etc., which I feel Hamfest committee should settle before closing the HAMFEST account (there are few members who think that we should close ICICI a/c of HAMFEST first and transfer the balance to MARS a/c and then we can finalise HAMFEST accounts).There are members who think that we should trnasfer the balance outstanding in HAMFEST bank a/c and then we should finalise the accounts, as overall MARS accounts (to which I strongly oppose untill there is net positive balance coming into MARS bank a/c).

Further, there are many members who have expressed their concern, whether the existing signatories can withdraw any amount from the MARS a/c? Let's discuss the matter which should be given a top priority now.

Meanwhile, members who have spent from their pocket for any event, MARS or HAMFEST, and who have not been reimbursed by the event/activity-in-charge may put up those expenses thru this forum.

Dear friends,

<<<<As far as the AGM is concerned, we have to finalize the accounts first, The accounts have to be submitted by the treasurer of Hamfest (VU2IZO) and By treasurer of MARS (VU2CBU).. My job is to scrutinize the accounts and do a internal audit (which I have been doing for past 5 years). after the accounts are scrutized by me, they will be submited to our Auditors, once our auditors have OKed the accounts, they will be sealed and signed by the office bearers.
and we can conduct the AGM.>>

How can I submit or finalise the accounts when the accounts like expenses are not presented, after some members have taken advances? They have yet to submit vouchers/bills for the expenditure incurred by them?

Or should I go ahead and submit (or finalise) MARS accounts by showing amounts as a/cs Receivable/due to MARS?

Sorry for the cross-posting, I have just taken from atul chitnis' diary, thanx to sriram.
Today, with the Internet becoming the world's biggest BBS, and with countless mailing lists, web forums and other modes of amss communication, I find that just about everyone likes to stay in "lurk" mode - i.e. read-only.
Then, when a community dies for lack of participation, they look for all sorts of reasons. Excuses there can be plenty, but there can be only one truth:
If you don't participate, the community dies.

The thing that applies to mailing lists also applies to things like User Group meetings and other community related activities. Most people are just happy to take what is offered, but if you ask them to give (in the form of participation), you are met with stone-walled silence.
These days, it is even becoming increasingly difficult to make people attend community meetings! Those ever-enthu students "grow up" to become "busy adults" and just don't find it important enough to be part of the community.

2450. Re: [m_a_r_s] without comments (for those who care)

Yahoo group: m_a_r_s
Date: 2005-07-13 04:36:47 UTC
From: Sriram N
Topic: 2445 Message: 2450

Hi Ulhas:

I'm a lurker on the Linux-Bangalore-2005 mailing list - (http://groups.yahoo.com/group/linux-bangalore-2005). This is the discussion list for an International class even called "Linux-Bangalore". This was the name until last year, but this year a change of name is on the anvil.

This mailing list has a thread of discussion called "The next seven days" that is worth reading. The various active participants are all well known and respected community builders. They're presently discussing both how to organize an even better event this year as compared to last year's already fantastic event.

It's worth signing up on this discussion list to see how other communities work hard at keeping each others' morale high, indulge in brain storming, and ensure that the event is a success.

Even though not many Martians may be Linux savvy - I believe Nilesh Malpekar, VU2OZO and perhaps VU2AXN may be Linux users - Linux enthusiasts are techies just as HAMs are.

In case any Martian chooses to sign up, here's the message thread I was referring to
http://groups.yahoo.com/group/linux-bangalore-2005/message/1790?threaded=1

2451. The original mail talking about community

Yahoo group: m_a_r_s
Date: 2005-07-13 04:40:12 UTC
From: sriramx_2000
Topic: 2451 Message: 2451

All:

My apologies if such mail forwards are off-topic, but I'm merely
trying to share information on how other communities in India work.

http://groups.yahoo.com/group/linux-bangalore-2005/

We have invited LUGs every year, through personal mailto the coordinators
or (if no such address was available) via a mail to the list, and of
course by putting info on the site.

And amazingly, people do come (there goes the distance/cost argument!) -
they just refuse to represent their LUGs/SIGs!

Even if there isnt a big contingent from each LUG (like we have from Goa
every year)- it would be fantastic if the coordinators of each LUG (or
the
appointed representatives, which could be members empowered by the LUG to
speak on the LUG's behalf) could have a sort of national round-table
conference at the event, where they can discuss their issues, their
experiences, their solutions and their recommendations.

I find this particularly urgent now, because I am beginning to see the
LUGs being sidelined by the Powers That Be. In fact, someone from a
well-known vendor recently told me that the LUGs are irrelevent, and that
they only work with organisations that actually do something worthwhile
(according to the vendor).

These very same vendors also tend to raise the profile of *some* groups
(that they are involved with) with people like the Government, completely
cutting the LUGs out of the picture.

This, according to me, is killing the goose that lays golden eggs, or
shooting yourself in the foot. It was the LUGs that did the hard ground
work, it is the LUGs that support people who have questions, it is the
LUGs who come up with initiatives. When the LUGs become irrelevant, the
passion and the backbone goes out of the picture, and the efforts die
down, making it a vendors' game.

This is a state that needs correction - but it is for the LUGs to help correct it. They have to realise that they cannot exist in isolation, but at the same time they have to understand that politics isnt the solution either.

Today, not a single LUG cooperates with another anywhere in India, there is no agenda, there is no coordinated effort.

The same person who made the earlier statement also admits that he felt that the community spirit no longer existed, and without it he personlly lost interest.

I agree with him, because I felt the same thing in my home LUG.

The difference between what a LUG meet used to be and what a (say) Java or
C# users group meet is today is drastic. The latter are typically cold, sterile, focussed on personal or corporate needs, while the former was about working together, a community spirit that was about achieving something as a movement, crossing social and commercial borders.

There is a crying need to bring that spirit back before it is completely gone, effectively taking away that one factor that the MS marketing department could never counter. In effect - no community, and we have lost
the war.

"Sharing" is a social concept, not a commercial one - whether sharing of software, ideas, knowledge or just resources. "Community" is a social concept too, so the very core of FOSS (shared development, shared efforts,
shared resources) is based on the community spirit.

Which brings me to your next point:

> And can we have an Ideology track for
> Copyleft/Evangelism/CreativeCommons/$cause? Right now, I guess the
> firebrands have to catch people in the halls and splash them with holy
> water on an informal basis. This way, we could have more focussed
> discussion of these things. Besides, it would introduce a healthy amount
> of yelling and screaming and (dare I dream) blood and mutilation (I'm
> thinking bring-your-own-cleavers here).

Every year, we have had a "community track" which was meant to be *precisely* what you talk about. But what's the point of throwing a party if nobody comes? While every track overflowed with talk proposals, the community track was left hanging. In fact, other than Sudhakar "Thaths" Chandrasekharan's talk in 2003, I don't recall a single social or community oriented talk. Sure, there were the obligatory "how to run a FOSS project"talks, which do have their place, but those are certainly not
"community" talks.

And frankly, that is the real reason why students are missing. The fire has died down, and no one is willing to blow into the dying embers to try and get it going again, no one is willing to feed the fire with his/her own time.

The other side isn't winning the war - we are losing it.

> And it would be *amazing* if we could get Lawrence Lessig to speak.

Have you read Larry's blog? http://www.lessig.org/blog/

Larry goes whereever he can, whereever he feels he can make a difference. But he only goes where there is an active community that isn't vendor-driven or product oriented. That is why you will find him at a conference in Brazil or in a university in Germany, but rarely at a conference that is effectively about something commercial (unless, of course, he is involved professionally).

If you think that I get passionate about things, you need to meet Larry - he is unbelievably focussed, and passionate about his causes. If you want to see Larry at LB, then it would have to be because he believes (rightly)
that there is something to be achieved to further his causes, and that he is addressing communities, not commercial entities who simply see him as a
way of attracting eyeballs.

I can't speak for him, but I can safely assume that if there is a community, he will be inclined to come.

The same, I believe, applies to people like Linus, Alan Cox, Maddog Hall and others.

I can also safely say this:

Unless the Indian FOSS community projects itself and highlights its own work (instead of only coming to listen to foreign big names speak - the janata entertainment that Biju referred to), there is little hope of India
ever being seen as a FOSS Superpower.

I again need to point everyone at my own article from years ago:

http://atulchitnis.net/diary/showentry/100

If you don't participate, the community dies.

Now how do we get that message out to the LUGs? How do we get that message
through to our own home LUGs?

Atul

2453. cross post from VUHams Amateur Satellite PCSAT2

Yahoo group: m_a_r_s
Date: 2005-07-13 07:28:32 UTC
From: Huzefa Merchant VU2HIT
Topic: 2453 Message: 2453

The Following From AMSAT -UK

Radio Amateurs make up 6 of the 7 crew members of the STS-114 Space Shuttle due for launch at 1951 UTC on Wednesday July 13th. They are:

Mission Commander - Eileen Collins, KD5EDS
Mission Specialist - Wendy Lawrence, KC5KII
Mission Specialist - Charles Camarda, KC5ZSY
Mission Specialist - Soichi Noguchi, KD5TVP
Mission Specialist - Andrew Thomas, KD5CHF/VK5MIR
Pilot - James Kelly, KC5ZSW

Further information on them can be found at:

http://spaceflight.nasa.gov/shuttle/crew/
and
http://www.spacedaily.com/news/shuttle-05zzn.html

The Amateur Satellite PCSAT2 will be carred onboard STS-114, however, it will not become operational until it has been mounted on the outside of the International Space Station. An EVA to do this is scheduled to take place on July 21st.

PCSAT2 webpages: http://web.usna.navy.mil/~bruninga/pcsat2.html and
http://www.pcsat2.info/

****

The folling information is from AMSAT-NA

STS-114 will not be carrying a SAREX package so the crew will not have access to amateur radio prior to docking with the ISS. Once onboard the space station, they will be able to use the equipment on ISS if they have time.

STS-114 is carrying an amateur radio payload called MISSE 5 / PCSAT2. This should be placed on the exterior of the ISS during the third space walk. It will primarily be a packet system with a couple of other options. More info on it at
http://web.usna.navy.mil/~bruninga/pec/pc2ops.html

Dear Zyros,

No I'm not life-member of MARS.

Appreciate your efforts for getting the HAMs together
with eyeball QSO event. I'm currently out of action as
far as this group is concerned due to personal work.

Would like to know opinions of fellow HAMs on
following points

1. What do you think MARS or say any local HAM
society, should do for its members and HAM
wanna-be(s)?

2. What do you think each one of us as a member should
do for the society?

Cheers,

Nilesh, VU2MLW

BE an umbrella organization for technical support ("how do I set up my antenna ?"), infrastructure (the repeaters), arrange HAM classes, help with exam preparation, help with licenses and buying radios, encourage new members to come forward and demonstrate something new, reconcile with the fact that there will be members who won't do much but who'll nonetheless say they're Martians.

I know that the "help with licenses" expectation will be met with a grimace by the long time active folks who've done lots, but who see so few people on air.

I've been repeating ad nauseum about my experiences with the Linux User Group in Nashik, and my stints as a lecturer/project mentor to B.E. students. Years ago, I'd decided that if I could wow even _one_ person, then that complete academic year was worth all the hard work.

> 2. What do you think each one of us as a member should
> do for the society?
>
Attend meets, exchange information on what's latest, what new stuff we've tried, our learning adventures, challenge each other competitively to arcane mind-stretching stuff. Take on responsibilites like ZRS decided to host an informal meet. Not crib about one another, and focus on where we want to be, rather than where we are.

Some months ago, I'd felt a bit outraged that AXN had posted the frequencies to the Air Traffic Controllers for the Air Show. I'm from the Industrial Automation + Finance programming sector and specialize in security, and in our world, we believe in "do not reveal more than is necessary, esp to newbies and

the incompetent". Also, I've to keep our networks secure from script kiddes and wannabe techies who derive great kicks from cracking into and damaging computers. With such a background, the fact that MARS is a hobby group didn't quite sink into me at that time.

MARS is a hobby group, and as such long time members should not be expected to continue to keep the group alive _all by themselves_. Some proactive actions by the rest of us would go a long way. Now I'm just waiting for my license...

Thanks. I am not in Mumbai on Sunday July 17. My HF Antenna at Baroda is disconnected, since I was not in India. I shall bring my VHF / UHF Kenwood DH7AD Handee from Baroda on Monday July 18. Is it possible to activate some repeater in Mumbai form TISS, Deonar (near Chembore). What are the repeater frequencies? What are the VHF /UHF net timings and frequencies?

That's gr8 work. very often I have heard ppl say they are stdngby when they actually QRT. I believe folks need to be educated on how to check in a net and relay traffic.In fact i personally am no gr8 operator and wud love to learn more; the constant endeavour is to improve one's own operating skills. But there are some who badly need a refresher course in operating. Why i was recently given a 5-3 signal report on the repeater and for a moment i was floored until i guessed it should have been 3-5 with the battery juice running low(no offence meant to the guy who said that but sometimes just love certain idiosyncrasies) VU2CDP VU2CDP VU2CDP over ;-) --- Ankur Puranik wrote: > Hi Sriram. > Well looking at the list of checkins, it very much > appears that the people marked with a star are the > ones who are regular at the NON... but its not so... > Well... acc to VU2UGO this is what happened for the > first time in the NON that a Net controller actually > did a re-check.. > What we did was .. before closing down the net, we > gave a call back to all the hams who had checked > into the NON, just to check if they were really > standing by till the net was over... 2463. Good News for VU2IZO and his fans

Yahoo group: m_a_r_s
Date: 2005-07-15 10:25:23 UTC
From: nilesh rathod
Topic: 2463 Message: 2463

Dear Members,

You are aware that Mr.Milind Korde (VU2IZO) aka Micky, was expelled by the Managing Committee for following reasons :-

Unauthorized media and press releases were give by him to NDTV, Maharashtra Times and Indian Express. These T.V. interviews and press releases were given on behalf of our society without the consent of any office bearers, mainly the secretary who is the official spokesperson of the society. These press releases were not only unauthorized but also misleading and wrong, this has seriously and badly affected the reputation of our society, especially our relations with all the government organizations.

Immediately after the first interview,he was specifically informed by our secretary Mr.Nilesh Rathod ? VU2NLF, not to give any further press releases/interviews. Inspite of this warning he continued giving these press releases and conducting media briefings.

Looking at these unauthorized actions by him and his past record of consistent alcoholic problem, (Consuming alcohol during society activities).

The following decision has been taken by the Managing Committee :

Milind Korde ?VU2IZO was expelled from the society and your membership cancelled with immediate effect.

A lot QRM was created that this was not done in a proper official way and therefore a ?SHOW CAUSE NOTICE? was issued to him as required by our byelaws 32(b) to give the society an explanation as to why he has carried out these unauthorized activities and why he should not be expelled from the society.

During the Hamfest it was decided by the Hamfest Managing Committee (where VU2IZO is the Treasurer) that we will start classes as we are likely to run some loss due to lack of funds, hence we will compensate this loss by running the classes and earning the money, we even conduct a awareness drive on the last day of the Hamfest to attract more students for our next batch, unfortunately VU2IZO not only cashed on our MARS goodwill, but also used all our course material, Books, CD, PowerPoint presentations to start his classes in TARA.

The meeting as per the ?show cause notice? took place on 5th February 2005 at 7:00 PM, The M.C did not get any suitable explanation for his actions. During the meeting once again he was requested by the start classes in TARA as this would adversely affect the financial status of MARS , as this would further add to the reasons for expulsion. But he had already started the classes by then and there was no turning back. Subsequently the M.C took the final decision and expelled him from the society.

I have taken these steps in the capacity of the Secretary of MARS and to protect the interest of MARS, I have no personal grudge with VU2IZO, which please note, In fact I lost a good friend (VU2IZO), because of my commitments to the my post as the secretary of MARS.

Many our members have condemned our MC decision and action, as in their opinion, is was a wrong thing to do. In fact few of our M.C members have also claimed that they have signed because of the pressure of VU2NLF.

To the extent that one of our members has hacked in to all our MARS E-Groups and removed my name (VU2NLF) from the owner and made ?NLFKABAAP? owner of the group, after doing this, that person has included VU2IZO back into all our groups. This clearly shows that some of our members think that they are above the law, and they do that have any respect or recognition for the authority of the M.C.

MARS has officially expelled VU2IZO from the society, But Looking at all this love of our members for VU2IZO, I don?t think it is fair on my part to keep them apart. Hence during the AGM (which will be very soon hopefully). Let the JANTA (all the members present at the AGM) decide by fair VOTE, if the members want him back, who am I to stop them?

VU2IZO may also file is nomination to run for elections (if he wishes). His nomination will be valid once the votes are in his favour to be accepted back in the society.

There is a Chinese saying ?BE CAREFUL FOR WHAT YOU ASK FOR, YOU MAY JUST GET IT??,

VU2IZO has also demanded a official apology letter from VU2NLF for his wrong actions. I am pleased to inform that I will be carrying by apology letter with me during the AGM, and if the members vote in his favour and he is accepted back in the society, I will accept the decisions of our members and I will immediately offer my apology, that is a promise?

73

Nilesh ? VU2NLF

Secretary MARS.

dear vu2 kiz

the frequency of the repeater is

vhf 144.100 plus at 9.30 pm daily except sunday's

it goeson till 10.00 pm and longer

we have atleast 1 dozen check ins and the net controller is vu2 wll VISPI .presently he is out of town so he has asked vu2 axn (Ankur) to take the net

no net on uhf.

see you on the net

2477. Mailheaders for all these NLFkabaap emails...

Yahoo group: m_a_r_s
Date: 2005-07-17 14:50:12 UTC
From: Sriram N
Topic: 2477 Message: 2477

Dear Martians:

This is getting to be a bit too much.

I've attended just _one_ meet, and am otherwise notorious for making large posts about the need for a community, and ethics and whatnot..

To criticize NLF or to poke fun at him is in very bad taste.

This is the kind of stuff I'd feared way back when I'd protested about publicizing Air Traffic Controller information.

I've attached below the mail headers of one of the two mails that poke fun at NLF.

Since I haven't contributed much till date, I'll do so with my own special skills - Internet and web security. I happen to have some brief understanding of Internet security, etc. I manage some networks and servers all over the world in addition to my regular tasks as a medium level software architect.

I'm not sure that writing to NLF at this point would help much - I'm sure he's deeply grieved over all this crap happening about him. Whom else could I contact for information on the MARS website, yahoogroups, etc ?

Please write in directly to my yahoo address, and we'll take on from that point.

To the angry person(s) who is/are carrying on a campaign to malign NLF, I can only say - you're wasting your time. Action speak louder than words, and three years down the line all such amateurish gimmicks will not really benefit you.

For anyone else who's interested in tracing this person, I've enclosed the mail headers below.

2483. Enough is Enough

Yahoo group: m_a_r_s
Date: 2005-07-18 05:08:00 UTC
From: Huzefa Merchant VU2HIT
Topic: 2483 Message: 2483

The below mail was drafted and ready to sent this monday but was kept on hold due to request from a senior founder member so as not stir a QRM but it seems the members have a wrong picture of the other senior founder member , and active members so the mail now...

Stated below are my personal views and if there is any similarity of views between other members they are purely coincidental

Dear NLF and MARS Member

It is really great to hear from our Secretary....OUR SECRETARY....we call NLF "OURS" but he has never shown any kind of respect towards any of our founders members or to any... has he ?? well not to me atleast I am not trying to build any rebellion or trying to provoke members who feel the same ...but these are my views...lot has been said by many during the mail...

"our chairman VU2HIT could not handle the pressure and resigned... " I beg to differ on this statement if OUR SECRETARY thinks he can make this statement at his own assumption and get away with it, he needa little tuning...I resigned not because I could not handle the society work pressure nor did I have to prove anything to anyone ..it was because on June 6 2004 at the HAMFEST meeting I was decleared as UNFIT TO BE A CHAIRMAN by NLF himself.... and many members were present and they are a witness to this...so logically and ethically if the person who alleges this and is SELECTED(not ELECTED) in My committee it will be wrong to stay and continue to be the chairman or the M.C. Member...

The reason for my resignation stated was personal ...but also let me put this on record I also resigned because the HAMFEST 2004 Convenor thought and declared the CHAIRMAN of Mumbai Amateur Radio Society to be UNFIT for the post....any dignified person who so ever it may be will not tolerate this kind of abuse and insult done to him in front of other members...thus I made it very clear to VU2ICQ on june 7 when I gave him a telephonic call and also e-mailed my resignation to him immediately ..but he asked me to wait till he came back... I respected ICQ's statement & his request to ask me to continue as the CHAIRMAN..else I would have resigned immediately after last year election as I was very very QRLed at my morning QTH...but ICQ pulled me till june and asked me to continue..frankly speaking even I enjoyed working with him due to good compatibility between the both of us ...but 6 june left me devastated for the first casualty would had been my personal life as I fought with my XYL for no reasons and made matter worse at home and it took me nearly two weeks to console my wife...so this quick decision of resigning was not because I could not handle the work pressure of the society but it was due to abuses and insults made... to which any normal person with a stable mind will go wild.

I generally do not entertain or intend to reply mails of this stature but it seems beside NLF all founder members are being made to look responsible for the mess of MARS..everyone has praised NLF ...he has to be, why not ? for all thats he has done for the hobby which indirectly was for the society and I always appreciate NLFs hardwork ...but he did not realise that the other members working with him were having their their daily morning QTH and a personal life / family life and other responsiblities too, where in they have to

devote time and cannot devote full time to MARS and HAM RADIO , but then it was always like NLFs work was benchmarked to be 100 % complete and perfect ...NLFs expectation were always high and he expected us all to deliver the same output that he did which was not possible due to morning QTH and family responsibilities ...he always tried to compare his style of working with ours in which there would be certainly a diffrenece.... NLF wanted the work to be done always 100% perfect if not done then he would fire the person left right center in presense of everyone...please members tell me why things like morning QTH and Personal life were not considered when NLFs work was benchmarked....

I requested few capable members to take charge of chairman, but none came forward.. till today the chair of the chairman of MARS is still empty..

To put on record this was the mail I sent on please refer

----- Original Message -----
From: Huzefa Merchant VU2HIT
To: Mars Groups ; MARS CLASSES 2002 ; MARS ACADEMY
Sent: Saturday, August 21, 2004 4:26 PM
Subject: [m_a_r_s] CHAIRMAN ????

Prashant

Please explain "Decision about appointing new Chairman will also be communicated to you very soon"as for my understanding before tendering my resignation as a commitee member on the 13th August '04 Managing Commitee meeting,wherein the first resolution was adopted & passed unanimously to appoint Pankaj Pasad OM VU2RIO as a chairman and thereon other resolution were adopted by your commitee as per your email appointing other office bearers.

Kinldy explain , so why this confusion....

Huzefa Merchant
VU2HIT

The only mistake I commited before I left the meeting I signed the blank minutes book of that meeting leaving the same to completed by the other present MC members in a good faith ... rest is a history and would not like to comment on anything thereafter..members are smart enough to understand...the punishment.... I was removed from the mars classes and mars academy group..

We have always had to convience people to run for election.. Last year we didn't even have elections.. we barely got 7 people to fill the chairs."
yes very true ... why ..why members are not coming forward join managing commitee...why?????? I presume members who have worked during HAMFEST and past committees are well aware of the facts...

"I have stopped calling for meetings, as I was out of India for last 2 months and I have QSYed to Pune, I see nobody is interested and it is pointless for me to run from Pune to Mumbai, when Mumbaities are not interested ? "
It seems for past 5 years the past and present commitee member did not had a morning QTH(business & Jobs) and now suddenly the secretary has realised the importance of his morning QTH and now other members are being singled out for not doing the work properly since he was doing for last 5 years and we were not...

Yes Mumbaities are not interested in Jamming meeting wherein we meet every month for an eyeball and to talk about Hamming ...but it seems always otherwise...

Lastly I remain quiet before and after I resigned ..not that I could not have stated what I am doing now..simply because I did not want any QRM..but it seems lot of things are being discussed on emails and off the emails where I feel marginalised for what I am not supposed to be.... and also to make records straight..
lot had been mentioned by SXF ..CDP and NLF..if I want I can write a whole story ..but I only stated what has affected me... and nothing should be read between the lines as I am not interested in any post or controversy raking up..yes if society want my service i will be there no matter whether I am on the MC or not ..it is just because i am not compatible with a particular member..rather a particular member cannot tolerate me .... i will be working as much i can ....as a LOYAL MEMBER of the society which i was always doing.

From: Sriram N
Topic: 2484 Message: 2484

Hi:

I was a bit wild last night at seeing disturbing mails on the list.

I'd even called the Cybercrime cell of the Mumbai police - my landlord works there. In our discussion, I'd told him that we have mail headers and IP address and such, so could we locate the person ? He assured me that he could and asked me to give a written complaint, at which point I started thinking along the following lines:

1. I don't know who you really are.

2. I don't know the complete picture on what's wrong. HIT's mail this morning has left me wondering still more.

3. We're all hobbyists. Who among us really remembers the exact details of a fight last year ? Along the same lines, who'll remember this fight three years from now ?

4. I'm sure you're a long timer, or close to a long timer. With the recent spate of mails, I'm sure there are issues that have built up over the years. But perhaps coming out in the open and talking about these issues, the way HIT has done, is a better solution.

I told him that I'd like to talk to some senior MARS members and that we were mostly likely not interested in prosecuting anyone. He's told me to contact him when we've all arrived at a consensus.

With my mentioning the cybercrime division, and my landlord's name, etc.. please don't assume that I'm showing off my contact, and reach, and capability.

On the contrary, I was shocked at how quickly matters can get out of control and reach alarming proportions. Please read on for a from-the-heart explanation of why I'm not threatening you.

When I joined MARS, I was very thrilled at fulfilling one of my childhood dreams of heing a HAM. Being an adult, I'm realistic about disagreements, being side-lined, etc happening in groups of people. I believe there are such issues within the MARS community, and perhaps within the HAM community.

All I can do is request you to please cease these website defacements and slander posts on the mailing lists. Such actions send the wrong signals to youngsters and newcomers.

I believe you're outraged at how some of you have all been treated.

As a newcomer, and as one of the younger generation members, I request you to instead express your ire in some other form - perhaps the way HIT has, or

perhaps by attending a meet and then talking about change in leadership, or more credit for other members, or something else that you have in mind that I've not thought of.

There's a whole crowd of new generation members out there, and I'm sure we're glad to be learning our lessons on what happens when seniors fight.

2485. An explanation of my approaching the Cyber Crime cell

Yahoo group: m_a_r_s
Date: 2005-07-18 07:14:22 UTC
From: Sriram N
Topic: 2485 Message: 2485

Dear Martians:

I wish to explain my reasons for appraoching the cyber crime cell.

My landlord, Rajesh Choughule, happens to have grown up in Nashik years ago. And I reside in his Dad's flat today. I've a great rapport with the whole family.

With the recent mails, etc, I wanted to ask Rajesh to tell me - on a personal level - if he could help identify who's defaced the website (as NLF wrote), and who's posted certain unfortunately worded mails to the yahoo group (of which I am a recepient). Rajesh told me that he could accompany me to one of his seniors who would perhaps be able to co-ordinate with various ISPs etc and help identify the persons involved.

I then said that this is a particularly deplorable matter, where the errant person may perhaps not have any other way to express his outrage at wrongs done to him. I went on to add that we, as a group of hobbyists are more interested in resolving our internal bickerings and mis-understandings, and that we're most likely not interested in criminal prosecution etc.

This was my stance, and I'm sure none of us want to drag outsiders into our midst.

Already, we must be the laughing stock of other HAM clubs all over India... Sigh, what shame and dishonour !

With the humblest of requests to all my seniors to mend their differences in the spirit and recollection of the founding philosophies of MARS,

-- Sriram, an SWL.

2486. My First contact on FM Birds!

Yahoo group: m_a_r_s
Date: 2005-07-18 13:12:40 UTC
From: VU2UGO
Topic: 2486 Message: 2486

hello to everyone!!

I listen to 2m downlinks of VO52, ISS, UO-11 & NO-44 whenever i get time, on my IC2100 (2m rig) and stacked 5/8 antenna at my qth.

Yesterday morning I was able to make my first satellite contacts via AO-51 & VO-52 :
1. HZ1NH - Dr.Nader from Riyadh, Saudi Arabia - my First Satellite contact that also DX :-) on AO-51
2. VU2RMS - Ramesh from Bangalore - my first VU contact via AO-51 as well as VO-52

I was operating from VU2SFN's qth and the working condition was:
XE1MEX crossed dipole homebrewed handheld yagi (4el VHF/8el UHF homebrewed by VU2SFN)
(more details of the antenna at http://xe1mex.gq.nu/antenas/yagi.html)
and Kenwood 78A for uplink (5W on VHF / 3 W on UHF)
and Icom R10 for downlink (VHF/UHF receiver)

It was a wonderful experience, listening to my own voice on the downlink (like an echo) and when i heard HZ1NH returning my call and he gave me report as 57 and lateron contact with VU2RMS with a report of 55.

Thanks to George (VU2GT) for helping us tune the homebrewed dualband handheld yagi and Shailesh (VU2SFN) for giving me the chance to operate from his station.

I still need to work on the doppler adjustments while receiving the satellite signal from VO-52 (60khz linear transponder) and with AO-51 (doppler of almost 9khz in its UHF downlink).

I'm also planning to have few changes/updates to improve the current setup so that i can work the BIRDS regularly and exchange good reports with other stations, VUs and DX as well.

R U Thinking of going QRV on Satellite mode or if you hv any queries send a reply.
Its easy and fun to work the Low Earth Orbiting FM satellites!!

Dear HIT,

I am very sorry to hear that you resigned because I declared that you are unfit to be the chairman. if any chairman resigns just because someone call him unfit, than I guess I must be right, he truely do not deserve to be the chairman.

Being a chairman is a very big responsibility... at times you have to take a lot of crap,, I am as a secretary take a lot crap from so many members, but that does not make me you run away and resign..

Yes I expect 100% from all the members who have come forward and taken the responsibilities out of their own free will... if you run for election and take up a post.. then I expect you to deliver...otherwise don't run for office.

The problem here is I am very frank and I don't backbite, I tell that person on his face if I feel he is doing something wrong or not living up to his or her required standards.. I know and I understand that people get offended, and I am sorry, but the truth after all is truth.. to add to injury what people don't like is I say it in front of all members.. I am sorry I know, but meetings are the only times we meet, I don't have time to deal with each members individually and seperately.

I have this god given gift of remembering and keeping a complete log and track records of people whom I interact with... If you notice, I never shout on people who make mistakes for the first or second or the third time.or the fourth.. but when I check the log.. that this guy is taking responsibility and failing again and again.. I start to react...plus when I see that he is a founder members it makes the matters worse..

It is not that I don't respect the founder members.. I do..but as founder members they have some resposibilities towards the society... You can't give a birth to a baby and then abandon it... you are responsible for the baby...when I see that most of the founder members have abandoned the baby I really really feel sad.. and I start losing respect for them.. that is the reason I get angry with you guys...

I feel like I am the only parent for the baby...for 5 years I have tried my level best to take care of our baby...with or without the founder members.. more than half of the founder members have never even taken the post on the M.C, it about time they take charge and relieve some of us...

Hamfest was the biggest event of our society.. how many founder members helped for it ? how many even attended it ?? do they have any shame.. ? I can understand they may be busy and can't attend for 3 days, but may be one day ? one hour, just to give their support ? if they were really really busy for all 3 days, than maybe before the event and help with preparations which went on for a full year ?

Maybe you don't like NLF, you hate his guts, but that should not make you resign and abandon your baby..

Well HIT, this all is going to change very soon, so please have patience for a few more days... the new committee will surely consider your case and be more accommodating with you I am sure..

But I sincerely hope that you don't resign again next year.. if I declare you unfit.

I am sorry if you are offended, please accept my apology, but this is how I am.

The below mail was drafted and ready to sent this monday but was kept on hold due to request from a senior founder member so as not stir a QRM but it seems the members have a wrong picture of the other senior founder member , and active members so the mail now...

Stated below are my personal views and if there is any similarity of views between other members they are purely coincidental

Dear NLF and MARS Member

It is really great to hear from our Secretary....OUR SECRETARY....we call NLF "OURS" but he has never shown any kind of respect towards any of our founders members or to any... has he ?? well not to me atleast I am not trying to build any rebellion or trying to provoke members who feel the same ...but these are my views...lot has been said by many during the mail...

"our chairman VU2HIT could not handle the pressure and resigned... " I beg to differ on this statement if OUR SECRETARY thinks he can make this statement at his own assumption and get away with it, he needa little tuning...I resigned not because I could not handle the society work pressure nor did I have to prove anything to anyone ..it was because on June 6 2004 at the HAMFEST meeting I was decleared as UNFIT TO BE A CHAIRMAN by NLF himself.... and many members were present and they are a witness to this...so logically and ethically if the person who alleges this and is SELECTED(not ELECTED) in My committee it will be wrong to stay and continue to be the chairman or the M.C. Member...

The reason for my resignation stated was personal ...but also let me put this on record I also resigned because the HAMFEST 2004 Convenor thought and declared the CHAIRMAN of Mumbai Amateur Radio Society to be UNFIT for the post....any dignified person who so ever it may be will not tolerate this kind of abuse and insult done to him in front of other members...thus I made it very clear to VU2ICQ on june 7 when I gave him a telephonic call and also e-mailed my resignation to him immediately ..but he asked me to wait till he came back... I respected ICQ's statement & his request to ask me to continue as the CHAIRMAN..else I would have resigned immediately after last year election as I was very very QRLed at my morning QTH...but ICQ pulled me till june and asked me to continue..frankly speaking even I enjoyed working with him due to good compatibility between the both of us ...but 6 june left me devastated for the first casualty would had been my personal life as I fought with my
XYL for no reasons and made matter worse at home and it took me nearly two weeks to console my wife...so this quick decision of resigning was not because I could not handle the work pressure of the society but it was due to abuses and insults made... to which any normal person with a stable mind will go wild.

I generally do not entertain or intend to reply mails of this stature but it seems beside NLF all founder members are being made to look responsible for the mess of MARS..everyone has praised NLF ...he has to be, why not ? for all thats he has done for the hobby which indirectly was for the society and I always appreciate NLFs hardwork ...but he did not realise that the other members working with him were having their their daily morning QTH and a personal life / family life and other responsiblities too, where in they have to devote time and cannot devote full time to MARS and HAM RADIO , but then it was always like NLFs work was benchmarked to be 100 % complete and perfect ...NLFs expectation were always high and he expected us all to deliver the same output that he did which was not possible due to morning QTH and family responsibilities ...he always tried to compare his style of working with ours in which there would be certainly a diffrenece.... NLF wanted the work to be
done always 100% perfect if not done then he would fire the person left right center in presense of everyone...please members tell me why things like morning QTH and Personal life were not considered when NLFs work was benchmarked....

I requested few capable members to take charge of chairman, but none came forward.. till today the chair of the chairman of MARS is still empty..

To put on record this was the mail I sent on please refer

Subject: [m_a_r_s] CHAIRMAN ????

Prashant

Please explain "Decision about appointing new Chairman will also be communicated to you very soon"as for my understanding before tendering my resignation as a commitee member on the 13th August '04 Managing Commitee meeting,wherein the first resolution was adopted & passed unanimously to appoint Pankaj Pasad OM VU2RIO as a chairman and thereon other resolution were adopted by your commitee as per your email appointing other office bearers.

Kinldy explain , so why this confusion....

Huzefa Merchant
VU2HIT

The only mistake I commited before I left the meeting I signed the blank minutes book of that meeting leaving the same to completed by the other present MC members in a good faith ... rest is a history and would not like to comment on anything thereafter..members are smart enough to understand...the punishment.... I was removed from the mars classes and mars academy group..

We have always had to convience people to run for election.. Last year we didn't even have elections.. we barely got 7 people to fill the chairs."
yes very true ... why ..why members are not coming forward join managing commitee...why?????? I presume members who have worked during HAMFEST and past committees are well aware of the facts...

"I have stopped calling for meetings, as I was out of India for last 2 months and I have QSYed to Pune, I see nobody is interested and it is pointless for me to run from Pune to Mumbai, when Mumbaities are not interested ? "

It seems for past 5 years the past and present commitee member did not had a morning QTH(business & Jobs) and now suddenly the secretary has realised the importance of his morning QTH and now other members are being singled out for not doing the work properly since he was doing for last 5 years and we were not...

Yes Mumbaities are not interested in Jamming meeting wherein we meet every month for an eyeball and to talk about Hamming ...but it seems always otherwise...

Lastly I remain quiet before and after I resigned ..not that I could not have stated what I am doing now..simply because I did not want any QRM..but it seems lot of things are being discussed on emails and off the emails where I feel marginalised for what I am not supposed to be.... and also to make records straight..
lot had been mentioned by SXF ..CDP and NLF..if I want I can write a whole story ..but I only stated what has affected me... and nothing should be read between the lines as I am not interested in any post or controversy raking up..yes if society want my service i will be there no matter whether I am on the MC or not ..it is just because i am not compatible with a particular member..rather a particular member cannot tolerate me .... i will be working as much i can ....as a LOYAL MEMBER of the society which i was always doing.

Dear HIT,

I am very sorry to hear that you resigned because I declared that you are unfit to be the chairman. if any chairman resigns just because someone call him unfit, than I guess I must be right, he truely do not deserve to be the chairman.

Being a chairman is a very big responsibility... at times you have to take a lot of crap,, I am as a secretary take a lot crap from so many members, but that does not make me you run away and resign..

If my memory serves me right, I called you and specifically requested you "NOT TO RESIGN" after you decided to resign as VU2ICQ qsyed to Singapore. I distinctly remember you telling me that you are very QRL with your work and there is a lot of QRM becuase of MARS in your personal life.

I even assured you that I will soon take up as the secretary and relieve your pressure. to the fact that we need a able Chairman to represent MARS during Hamfest 2004.

In fact in the farewell party we gave to VU2ICQ, I repeated told you not to resign.. when you were hell bent on resigning, I even requested VU2ZRS and VU2UGJ to take charge as Secretary and Chairman of the society... Please try to recollect...I am sure a lot of us were present in that party and they can confirm this...

Yes I expect 100% from all the members who have come forward and taken the responsibilities out of their own free will... if you run for election and take up a post.. then I expect you to deliver...otherwise don't run for office.

The problem here is I am very frank and I don't backbite, I tell that person on his face if I feel he is doing something wrong or not living up to his or her required standards.. I respected ICQ's statement & his request to ask me to continue as the CHAIRMAN..else I would have resigned immediately after last year election as I was very very QRLed at my morning QTH...but ICQ pulled me till june and asked me to continue..frankly speaking even I enjoyed working with him due to good compatibility between the both of us ...but 6 june left me devastated for the first casualty would had been my personal life as I fought with my
XYL for no reasons and made matter worse at home and it took me nearly two weeks to console my wife...so this quick decision of resigning was not because I could not handle the work pressure of the society but it was due to abuses and insults made... to which any normal person with a stable mind will go wild.

I generally do not entertain or intend to reply mails of this stature but it seems beside NLF all founder members are being made to look responsible for the mess of MARS..everyone has praised NLF ...he has to be, why not ? for all thats he has done for the hobby which indirectly was for the society and I always appreciate NLFs hardwork ...but he did not realise that the other members working with him were having their their daily morning QTH and a personal life / family life and other responsiblities too, where in they have to devote time and cannot devote full time to MARS and HAM RADIO , but then it was always like NLFs work was benchmarked to be 100 % complete and perfect ...NLFs expectation were always high and he expected us all to deliver the same output that he did which was not possible due to morning QTH and family responsibilities ...he always tried to compare his style of working with ours in which there would be certainly a diffrenece.... NLF wanted the work to be
done always 100% perfect if not done then he would fire the person left right center in presense of everyone...please members tell me why things like morning QTH and Personal life were not considered when NLFs work was benchmarked....

I requested few capable members to take charge of chairman, but none came forward.. till today the chair of the chairman of MARS is still empty..

To put on record this was the mail I sent on please refer

Subject: [m_a_r_s] CHAIRMAN ????

Prashant

Please explain "Decision about appointing new Chairman will also be communicated to you very soon"as for my understanding before tendering my resignation as a commitee member on the 13th August '04 Managing Commitee meeting,wherein the first resolution was adopted & passed unanimously to appoint Pankaj Pasad OM VU2RIO as a chairman and thereon other resolution were adopted by your commitee as per your email appointing other office bearers.

Kinldy explain , so why this confusion....

Huzefa Merchant
VU2HIT

The only mistake I commited before I left the meeting I signed the blank minutes book of that meeting leaving the same to completed by the other present MC members in a good faith ... rest is a history and would not like to comment on anything thereafter..members are smart enough to understand...the punishment.... I was removed from the mars classes and mars academy group..

We have always had to convience people to run for election.. Last year we didn't even have elections.. we barely got 7 people to fill the chairs."
yes very true ... why ..why members are not coming forward join managing commitee...why?????? I presume members who have worked during HAMFEST and past committees are well aware of the facts...

"I have stopped calling for meetings, as I was out of India for last 2 months and I have QSYed to Pune, I see nobody is interested and it is pointless for me to run from Pune to Mumbai, when Mumbaities are not interested ? "
It seems for past 5 years the past and present commitee member did not had a morning QTH(business & Jobs) and now suddenly the secretary has realised the importance of his morning QTH and now other members are being singled out for not doing the work properly since he was doing for last 5 years and we were not...

Yes Mumbaities are not interested in Jamming meeting wherein we meet every month for an eyeball and to talk about Hamming ...but it seems always otherwise...

Lastly I remain quiet before and after I resigned ..not that I could not have stated what I am doing now..simply because I did not want any QRM..but it seems lot of things are being discussed on emails and off the emails where I feel marginalised for what I am not supposed to be.... and also to make records straight..
lot had been mentioned by SXF ..CDP and NLF..if I want I can write a whole story ..but I only stated what has affected me... and nothing should be read between the lines as I am not interested in any post or controversy raking up..yes if society want my service i will be there no matter whether I am on the MC or not ..it is just because i am not compatible with a particular member..rather a particular member cannot tolerate me .... i will be working as much i can ....as a LOYAL MEMBER of the society which i was always doing.

MORE OVER WE ALL ,THE "SENIOR" FOUNDER MEMBER WHO HAVE DIFFERENCES HAVE NOTHING ANYTHING PERSONAL..

2491. When the shit hits the roof

Yahoo group: m_a_r_s
Date: 2005-07-18 16:53:46 UTC
From: sarla sharma
Topic: 2491 Message: 2491

Hi everybody,
Oh my my isnt it getting hot in here!!!!! But it had to happen sometime, and I am glad it happened.
NLF, do you remember the time we all sat together at Shetty's and dreamed about what we should name the new society that we had all come together to form? I hope you havent forgotten the immense faith and confidence we had in you as a person who would take our organization out of the so called "shackles"of JNA? I remember you being the most vociferous of the fact that JNA was run in an undemocratic fashion?
You must agree NLF, that we cooperated with you in every way we could. By we, I mean the core founder member group. We threw our weight behind you in all the activities of MARS and followed your orders unquestionably. But the difference between us and you is that we all had and still have family commitments and Hamradio is an important part of our lives, but not the only happening thing.
Most of all, we dont have to prove to you or to MARS that we pursue our hobby and at what level.
I distanced myself from MARS because I felt that things were getting dictatorial and judgemental. Please do examine all your emails to the group. Each and every one of them portrays an image of you sitting in judgement over others. It is a known fact, that, you want things done "your way". I am sorry, but under the cover of being"frank and having guts" you have managed to rub a whole lot of people the wrong way. Most, like me have chosen to stand by the side and watch, but some are taking pot shots at you, in their own ways,"nlf ka baap" being one of them!!! In your mail to HIT, you speak of losing respect for the founder members because they abandoned the baby they bought into this world. Cant help it NLF, since you snatched that the baby kept it all to yourself!!! Maybe if you had allowed the different parents to do their duties in their own way, the baby would have been healthier, and you would'nt be the only parent, and a single one to boot!!!
For the newcomers like Sriram, please, this is more deeper than you think. Dont change the focus of this whole thing into a cyber crime. The language used in your mail portrays what we would term in popular parlance of mumbai as a "hool". If it does bother you so much, then the best thing to do is to use your prowess and contacts to trace the person and then present it to the rest of the world. And please can you tone down the advice business a bit? It is bugging everybody, but I thought I should let you know.
So where do we go from here? Lets have the AGM as soon as possible. Lets elect a new GC. There are so many things to take care of. Lets clean up the mess and start again. But lets enjoy ourselves with the hobby, not make it into an office.
Cheers from Austin Texas,
Sarla

VU2UGO <vu2ugo@...> wrote:

hello to everyone!!

I listen to 2m downlinks of VO52, ISS, UO-11 & NO-44 whenever i get time, on my IC2100 (2m rig) and stacked 5/8 antenna at my qth.

Yesterday morning I was able to make my first satellite contacts via AO-51 & VO-52 :
1. HZ1NH - Dr.Nader from Riyadh, Saudi Arabia - my First Satellite contact that also DX :-) on AO-51
2. VU2RMS - Ramesh from Bangalore - my first VU contact via AO-51 as well as VO-52

I was operating from VU2SFN's qth and the working condition was:
XE1MEX crossed dipole homebrewed handheld yagi (4el VHF/8el UHF homebrewed by VU2SFN)
(more details of the antenna at http://xe1mex.gq.nu/antenas/yagi.html)
and Kenwood 78A for uplink (5W on VHF / 3 W on UHF)
and Icom R10 for downlink (VHF/UHF receiver)

It was a wonderful experience, listening to my own voice on the downlink (like an echo) and when i heard HZ1NH returning my call and he gave me report as 57 and lateron contact with VU2RMS with a report of 55.

Thanks to George (VU2GT) for helping us tune the homebrewed dualband handheld yagi and Shailesh (VU2SFN) for giving me the chance to operate from his station.

I still need to work on the doppler adjustments while receiving the satellite signal from VO-52 (60khz linear transponder) and with AO-51 (doppler of almost 9khz in its UHF downlink).

I'm also planning to have few changes/updates to improve the current setup so that i can work the BIRDS regularly and exchange good reports with other stations, VUs and DX as well.

R U Thinking of going QRV on Satellite mode or if you hv any queries send a reply.
Its easy and fun to work the Low Earth Orbiting FM satellites!!

I believe I explained why I spoke to someone who could have helped, and also that I didn't want this to be misconstrued as my making a mountain out of a mole hill. Yeah, I know what a "hool" is, but what I wrote was heart-felt.

We newcomers are not yet in the midst of much fighting, so you're absolutely right when you say that things are deeper than they might appear to be to newcomers such as myself.

As far as my learning about IP addresses and their owners goes: There is much more than meets the eye. I learnt a few things between yesterday and today, and have decided that all you folks - the founder and senior members - need to resolve matters. Please read my previous post where I'd _said_ that I request all you seniors to please resolve your conflicts.

> And please can you tone down the advice business a bit?
> It is bugging everybody, but I thought I should let you know.

Hey, thanks for the letting me know :) Looks like all this advice and such of mine has finally roused folks into actually saying what they had wanted to (and perhaps should have) all along !

I'm kinda curious.. does talk about what newbies would like to see at meets, and requests to seniors to resolve differences seem like "advice" ? Hmm, perhaps in an established community such as MARS, for a raw newbie such as myself to spout advice about would indeed be "unasked for", but I don't see anything proactive being done in the meanwhile either !

> So where do we go from here? Lets have the AGM as soon as possible. Lets

Ack.

This is what we newcomers have wanted all along.

Count this as impudence, but regardless of that fact that we're newcomers, we newcomers _do_ feel that corrective and proactive actions - such as this mail - should have been taken _way_ back, rather than having to wait till we see what happens when shit hits the fan.

Dear Sarla,

I have given the charge of the baby to you guys last year, but I was called back, as unfortunately VU2ICQ qsyed to singapore, had he been here I am sure he would have done a wonderful Job, I requested so many members to take charge of the society as the secretary, but no one came forward, hence by default I took charge..

Nevertheless, you guys can take it up from the next term if you feel up to it....

2498. Some thoughts. Re: [m_a_r_s] When the shit hits the roof

Yahoo group: m_a_r_s
Date: 2005-07-19 07:02:25 UTC
From: Sriram N
Topic: 2491 Message: 2498

Hello Sarla:

Please understand that we newcomers have been waiting for years to become HAMs. And we've always had this image of HAMs being friendly and united for the cause, etc.

When we newcomers see such non-HAM problems come to the fore, it's very disconcerting. Disillusionment has set into some of us - indeed some of my classmates have dropped the very idea of becoming HAMs !

Somewhere, we're all been like kids who want their elders (seniors) to behave responsibly. When we are confronted with what is increasingly seen as a lost cause, there's this fear of all these years of wait going down the drain.

Experienced persons such as yourself will float, you've been HAMS before MARS. Indeed, there was _so_ __much__ we newcomers didn't know until we read your mail to NLF on how you'd all faithfully supported him at the start, and then all these years.

Just as you've been a long time community member, I've been a long time community member as well. It's just that our domains are different. While you may, as a senior, term my thoughts and urgings as unsolicited and tiresome advice, it's just my way of rallying other newcomers to meet. My public response to you was driven by my feeling that no one seems to be doing anything.

In the meanwhile, HIT and I have communicated privately. Just as you have, he too has told me that there's lots more than we newcomers know, and that it'd be better that we newcomers stay out of such disagreements. Some of us newcomers have received similar messages, apparently - we have off list communications as well, you know.

So, in light of your statements "For the newcomers like Sriram, please, this is more deeper than you think.", I have decided to respectfully keep my mouth shut.

ZRS did manage to call a meet this Sunday! In the minds of the newcomers, this was a great step, and we are starting to feel that the show has gone on !!

Do continue to wish us the best as you have,

-- Sriram

2499. was it really easy for last 5 Yrs??????

Yahoo group: m_a_r_s
Date: 2005-07-19 10:04:12 UTC
From: Huzefa Merchant VU2HIT
Topic: 2499 Message: 2499

Dear NLF

I was loss to understand the way you have sarcastically apologised... or did you really meant an apology if so then be ready ...there will be a long list of people who you have rub the wrong way some way or the other...and this forum will be of your "FRANK and HAVING GUTS" opinion and apologies which we are not interested....

I am very sorry to hear that you resigned because I declared that you are unfit to be the chairman. if any chairman resigns just because someone call him unfit, than I guess I must be right, he truely do not deserve to be the chairman.

Yes your are indeed right in your perspective..but unlike you I have a very high and dignified Ego... where if you are on the post..Chairman of the society and attending the meeting of one of its events and getting insulted in front of members for no reason ...it is not because someone called ..no one will dare to... but you called me for what ..kindly explain ..the reason for my "UNFITNESS"... is it because this CHAIRMAN was really working and did some real good work in short stint of 2 months or the work done was not according your BENCHMARKED style of working?????....

If my memory serves me right, I called you and specifically requested you "NOT TO RESIGN" after you decided to resign as VU2ICQ side to Singapore. I distinctly remember you telling me that you are very QRL with your work and there is a lot of QRM because of MARS in your personal life.

I even assured you that I will soon take up as the secretary and relieve your pressure. to the fact that we need a able Chairman to represent MARS during Hamfest 2004.

In fact in the farewell party we gave to VU2ICQ, I repeated told you not to resign.. when you were hell bent on resigning, I even requested VU2ZRS and VU2UGJ to take charge as Secretary and Chairman of the society... Please try to recollect...I am sure a lot of us were present in that party and they can confirm this...

There is no need to confirm I very well remember all what happened...and I did not resigned since ICQ QSYed which I have made very clear and the fact is you still wanted someone ..who will toe your line ,be a rubberstamp Chairman.... I do not understand when I appointed RIO as chairman why was he struck down..or you felt him also be UNFIT or you did not like his face ...inspite that you were supposed to relieve the pressure why senior core founder members and other eligible member did not wanted to become the chairman where such a prestigious event the chairman would have share the DIAS ....

yes when we formed MARS to get free from the shackles OF JNA undemocratic behaviour ..we never thought that MARS would run by a democratic dictator...who had vision of "MY WAY OR HIGHWAY" attitude to run the society for last 5 years and making a this sounds as a FRANK and GUTSfull...bull shit ...it seems you were hell bent on to prove what you were and what you can do

It is not that I don't respect the founder members.. I do..but as founder members they have some resposibilities towards the society... You can't give a birth to a baby and then abandon it... you are responsible for the baby...when I see that most of the founder members have abandoned the baby I really really feel sad.. and I start losing respect for them.. that is the reason I get angry with you guys...

Sorry my friend you had misconstrued the whole thing I did not ask for respect in first place ..it was only that you stop giving your FRANK and GUT's full opinion about others ...and do not rub a whole lot of people the wrong way..

Hamfest was the biggest event of our society.. how many founder members helped for it ? how many even attended it ?? do they have any shame.. ? I can understand they may be busy and can't attend for 3 days, but may be one day ? one hour, just to give their support ? if they were really really busy for all 3 days, than maybe before the event and help with preparations which went on for a full year ?

Need to really make some introspection on this...out of 25 founder members 1 member went silent key 2 were expelled as they some how got entagled into NLF "FRANK and HAVING GUTS" opinion ..10 from the remaining 21 were always active some other way or the other..why did they distnaced from you... yes it was shameful sham that you have made a mockery of the senior and activefounders members ..so why the remnaing will come...to the event to make a fool of themselves by your "FRANK and HAVING GUTS" opinion...

Maybe you don't like NLF, you hate his guts, but that should not make you resign and abandon your baby..

Unfortunately beside MARS you are my friend we have learend HAM RADIO together and share a beautiful experience of Hamming ...but it does not mean i share your "FRANK and HAVING GUTS" opinion and i do not hate your GUTS nor do i do prove mine... yes it was our baby but did u give us any room to undersatnd the baby ..or allowed us to have any say...so why are now feeling that we have done nothing ..you compelled us to do nothing for the baby with your "FRANK and HAVING GUTS" opinion style of functioning....

Well any way my friend whether you take a backseat or not .. I am definitely taking a break since I feel whether you on the MC or not makes no difference as the ghost will remain of your "FRANK and HAVING GUTS" opinion will haunt the new MC and make them work as per your style which I cannot..so it does not matter if there is a change or not ..definitely not for me

Taking a break will also ensure less QRM which will make MARS work free from any UNFITNESS..and not allow NLF to give his "FRANK and HAVING GUTS" opinion about me and others.

Also there is lot I believe I can do without being on the committee..if the society feels I can do and I will always be available and for which even "FRANK and HAVING GUTS" opinion feel I should be on the committee..i will not

I will also now not be a part of JAM session I feel was doing with you ....and do some sincere hamming with my XYL VU2VAH ..enjoying and this wonderful and passionate hobby.

AND LASTLY HENCEFORTH I WILL NOT REPLY ANY OF YOUR sarcastically or "FRANK and HAVING GUTS" opinion emailed which i did for the last two mail as you unneccessarily pulled me into ....rather channelised my resources to mornng QTH where I will earn some of my lively hood..... which you do not.....

Signing clear

2500. Coincidence Of Coindences

Yahoo group: m_a_r_s
Date: 2005-07-19 10:55:23 UTC
From: Huzefa Merchant VU2HIT
Topic: 2500 Message: 2500

Dear Members

After my earlier mail fingers are being pointed to me ...the people pointing fingers should know they are pointing the other four towards them ..also coincindently i have some few Coincidences which are increasing as day pass..unable to solve the puzzle ..please help make solve the puzzle

1. when NLFKABAAP was created then why was NLF kept as a moderator, ideally a perosn hacking will never
allow the old owner to be given any rights whatsoever....I am unable to find answer to this what does this
points to???

2. For members info ... as per the yahoogroups a owner can only make an owner..so who made NLFKABBAP and
VU2ST owner???

4. As per sriram and anurag mail the internet connection as regard to the IP indicated is Tata Indicom..I
undersatnd that NLF has a Tata Indicom Connection...so what does that mean????

5. Why was the NLFKABAAP issue did not reflect in NLF mail during April,may June ..why now ..to create symapathy ..for what ....

6. why is the issue raised now????... to divert attention from what??

2. Members are not aware that there is a 2nd owner too... with an ID vu2st..so why this 2nd ID????

7. why is the issue not created for the 2nd ID...just becasue it sounds better or it is becasue our Club Call Sign
or is it made for an easy exit route for NLFKABAAP to keep the ownership in the same hands after the due
purpose is solved(symapthy Wave).

8. Some mails were put on the groups by nlfkabaap@yahoo.com ...with a single liner ...why will a smart hacker
do this ...infact he would reply with a smart mail..but it seems that the hacker is a fool..idiot ..and just want
to create more curiosity..anxiety and keep the issue alive..why??

So friends you are all smart enough to undersatnd after a lashing from all quarters a symapthy wave is being created for what???..no comments

Martians,

Its a humble request to stop it here now. We have had enough of this on the e-group.

1. For those who feel to do something for the society, its a open forum and time to come up & take charge.
2. And for those who have other priorities, they have a chance to relax too.
3. Pls conduct AGM and run for elections. If cant volunteer, then help society by casting your votes for the "right" candidate.

Lets stop this mail trails here now. It doesnt help anyone, not even ourselves.

73s and good luck.

Dear ICQ & Members

Yes in the fit of rage and anger to NLF mail I did send some mail which not only stated my feelings but I felt I washing dirty linens in public..where I did not realised that all the issues were in a private domain between few of our senior founders members

I humble request all now to stop this ..not to reply to any mail as regards to all the issue pertaining to personal pot-shots..which may antagonised some and start the same

Please my personal request to stop

hi

ISS is in repeater mode !!
uhf uplink, vhf downlink
(instead of its usual mode of packet digipeater)
don't know how long it will be in fm repeater mode
(last time in oct'04 repeater mode was on for some days
at the time when soyuz 9 carried expedition 10 crew to ISS)

heard vu2sfn(thane) and vu2sbj(manipal) on 2m ISS downlink on today's
evening pass.

so you have one more FM bird to work satellite!!

Dear FEO, NFL, & all concerned
This is Nothing Personal FEO & understand that it is just the ethics that u have addressed & thank u dear friend for your concern, your appeal & your advice, which as an elder u have expressed.
I am surprised to learn, what u have stated that u really do not know in depth of the ongoings within in the Society, then why this QM on the MARS group mail, my dear, ins ted a L.L or a cell call might have been the right way & much appreciated.

Any way thanks for the efforts, and many more thanks for making me change my mind to look in to the matter in a diffrent manner & to barge on to the group.

Any way this is for NLF now.

1) Rs.25,000/- was official Grant received for Hamfest. CLEAR

2) Rs.50,000/- removed from MARS A/c & transfered to Hamfest A/c on what basis.?

3) Was there a Managing Commitee Meeting conveyed with proper intimation to the M/C members, & if so was it ever resolved in the meeting,so held for the same,
&the minutes been written & signed by all members present, who so ever.?

4) Do U have the sole previlage for the amount to be spent of MARS with only two signaturies.? (Sorry VU2 CBU)

5) What about the CORPUS FUND of MARS & as life Members & when the Right of Information law exisist can i have access to the books of a/c .

6) What about the A/c of amount of Rs. 30,000/- which U R having on hand since before the Hamfest.

7) Were U not responsible to complete them before the 31'st 0f March 2005.

8) What abt the RIGS that VU2 CDP (Icom ic 706 Mk. II G) & VU2 TAL, Dr. A.K. Mittal & VU2 CFO, Mr. Vijay Vaidya Which they have received in the RAFFEL DRAW
during the HAMFEST or was it just a SCAM as VU2 CDP has mentioned in his Mails. These A/C ought to be setteled befofe hand or forget u ,as in the capacity o the Ham Fest Treasurer I won't be having any face to show in any of the future HAM activities.

Considering the above FACTS , i would suggest that A SPECIAL EXTRA GENERAL BODY MEETING BEEN CALLED TO SOLVE OUT THESE MATTERS , & EVEN ABOUT MY EXPULSION & THEN IT WOULD BE RIGHT TO RESOLVE THE MATTERS WHAT SO EVER. I TAKE THIS OPPOURNITY TO EXPRESS MY THOUGHTS & MY APOLOGIES, WHICH I HAVE ALREADY EXPRESSED IN THE PAST .MANY MORE TO BE REVILED TO U BY ME & Dr. MITTAL IF VU2 NLF SO DESIRES AS HE HAS STATED ABOUT BEING F RANK and HAVING GUTS
73's
de : MICKY - VU2 IZO

Friends,
It is very unfortunate that things have come to such a pass. Needless to say that the decision of the managaing committee was taken as per the byelaws and was in the interest of the society. If we plan to run the society on an emotional platform, believe me (and I have seen such events take place and the consequences) the society will finally close down. It is in the interest of the society that we stick to decisions taken by the MC. I have nothing personal against any member and I really do not know indepth of the goings ons but the fact that IZO went on to overrule the diktat of the MC is in itself sufficient reason to debar him. It could be IZO or NLF or anybody, but the decision should be the same.
IZO is a lovable person and I personally like him for his zest and enthusiasm. But anything in excess is bad. Reinviting him under such pressure will give very wrong signals to all, especially all the young entrants.
Already signs of revolt are there for all to see. Messing up with our website is just the begining.
It would be better to wind up the society rather than compromise on its working. You can see how far the society had come, with this discipline. We ran classes very professionally. Since the Hamfest limelight was being hogged by Nilesh, others felt left out and did not contribute. I think that was a very very poor display of attitude. Consider the amount of effort Nilesh put in. To me it was unbelievable. I was witness to it. Those few nights I attended the meetings, his concidence in face of all odds, was a revelation in itself. Those are the qualities of a leader. Only then can the society achieve its goals.
IZO is an emotional person. I appeal to this aspect of his, to withdraw. He is, as it is, doing well with TARA. He may score a point but at the end of it all, it will leave a bad taste in his mouth. He will earn more respect by backing off gracefully than reentering the society, because all the members will remember the incident.
I am relatively a new member and not so active too. But as an elder, I thought it fit to mention the above. Nothing personal IZO. It is just the ethics that I am addressing.
FEO

Sent: Friday, July 15, 2005 3:55 PM
Subject: [mars_academy_2003] Good News for VU2IZO and his fans

Dear Members,

You are aware that Mr.Milind Korde (VU2IZO) aka Micky, was expelled by
the Managing Committee for following reasons :-

Unauthorized media and press releases were give by him to NDTV, Maharashtra Times and Indian Express. These T.V. interviews and press

releases were given on behalf of our society without the consent of any office bearers, mainly the secretary who is the official spokesperson of the society. These press releases were not only unauthorized but also misleading and wrong, this has seriously and badly affected the reputation of our society, especially our relations with all the government organizations.
Immediately after the first interview,he was specifically informed by our secretary Mr.Nilesh Rathod ? VU2NLF, not to give any further press releases/interviews. Inspite of this warning he continued giving these press releases and conducting media briefings.
Looking at these unauthorized actions by him and his past record of consistent alcoholic problem, (Consuming alcohol during society activities).
The following decision has been taken by the Managing Committee :
Milind Korde ?VU2IZO was expelled from the society and your membership cancelled with immediate effect.

A lot QRM was created that this was not done in a proper official way and therefore a "SHOW CAUSE NOTICE" was issued to him as required by our byelaws 32(b) to give the society an explanation as to why he has
carried out these unauthorized activities and why he should not be expelled from the society.

During the Hamfest it was decided by the Hamfest Managing Committee (where VU2IZO is the Treasurer) that we will start classes as we are likely to run some loss due to lack of funds, hence we will compensate this loss by running the classes and earning the money, we even conduct a awareness drive on the last day of the Hamfest to attract more students for our next batch, unfortunately VU2IZO not only cashed on our MARS goodwill, but also used all our course material, Books, CD, PowerPoint presentations to start his classes in TARA.
The meeting as per the "show cause notice" took place on 5th February 2005 at 7:00 PM, The M.C did not get any suitable explanation for his actions. During the meeting once again he was requested by the start classes in TARA as this would adversely affect the financial status of MARS , as this would further add to the reasons for expulsion. But he had already started the classes by then and there was no turning back. Subsequently the M.C took the final decision and expelled him from the society. I have taken these steps in the capacity of the Secretary of MARS and to protect the interest of MARS, I have no personal grudge with VU2IZO, which please note, In fact I lost a good friend (VU2IZO), because of my commitments to the my post as the secretary of MARS.
Many our members have condemned our MC decision and action, as in their opinion, is was a wrong thing to do. In fact few of our M.C members have also claimed that they have signed because of the pressure of VU2NLF.
To the extent that one of our members has hacked in to all our MARS E-Groups and removed my name (VU2NLF) from the owner and made "NLFKABAAP" owner of the group, after doing this, that person has included VU2IZO back into all our groups. This clearly shows that

some of our members think that they are above the law, and they do
that have any respect or recognition for the authority of the M.C.
MARS has officially expelled VU2IZO from the society, But Looking at
all this love of our members for VU2IZO, I don't think it is fair on
my part to keep them apart. Hence during the AGM (which will be very
soon hopefully). Let the JANTA (all the members present at the AGM)
decide by fair VOTE, if the members want him back, who am I to stop
them? VU2IZO may also file is nomination to run for elections (if he
wishes). His nomination will be valid once the votes are in his
favour to be accepted back in the society.
There is a Chinese saying BE CAREFUL FOR WHAT YOU ASK FOR, YOU MAY JUST GET IT?",
VU2IZO has also demanded a official apology letter from VU2NLF for
his
wrong actions. I am pleased to inform that I will be carrying by
apology letter with me during the AGM, and if the members vote in
his favour and he is accepted back in the society, I will accept the
decisions of our members and I will immediately offer my apology,
that is a promise?
73
Nilesh ? VU2NLF
Secretary MARS.

Subject: [m_a_r_s] was it really easy for last 5 Yrs??????

Dear NLF"
I was loss to understand the way you have sarcastically apologised... or did you really
meant an apology if so then be ready ...there will be a long list of people who you have
rub the wrong way some way or the other...and this forum will be of your FRANK and HAVING
GUTS" opinion and apologies which we are not interested....

I am very sorry to hear that you resigned because I declared that you are unfit to be the
chairman. if any chairman resigns just because someone call him unfit, than I guess I must
be right, he truely do not deserve to be the chairman.

Yes your are indeed right in your perspective..but unlike you I have a very high and
dignified Ego... where if you are on the post..Chairman of the society and attending the
meeting of one of its events and getting insulted in front of members for no reason ...it
is not because someone called ..no one will dare to... but you called me for what ..kindly
explain ..the reason for my "UNFITNESS"... is it because this CHAIRMAN was really working
and did some real good work in short stint of 2 months or the work done was not according
your BENCHMARKED style of working?????....

If my memory serves me right, I called you and specifically requested you "NOT TO RESIGN"
after you decided to resign as VU2ICQ side to Singapore. I distinctly remember you telling
me that you are very QRL with your work and there is a lot of QRM because of MARS in your
personal life.
I even assured you that I will soon take up as the secretary and relieve your pressure. to
the fact that we need a able Chairman to represent MARS during Hamfest 2004.

In fact in the farewell party we gave to VU2ICQ, I repeated told you not to resign.. when
you were hell bent on resigning, I even requested VU2ZRS and VU2UGJ to take charge as
Secretary and Chairman of the society... Please try to recollect...I am sure a lot of us

were present in that party and they can confirm this...

There is no need to confirm I very well remember all what happened...and I did not resigned since ICQ QSYed which I have made very clear and the fact is you still wanted someone ..who will toe your line ,be a rubberstamp Chairman.... I do not understand when I appointed RIO as chairman why was he struck down..or you felt him also be UNFIT or you did not like his face ...inspite that you were supposed to relieve the pressure why senior core founder members and other eligible member did not wanted to become the chairman where such a prestigious event the chairman would have share the DIAS ....

yes when we formed MARS to get free from the shackles OF JNA undemocratic behaviour ..we never thought that MARS would run by a democratic dictator...who had vision of "MY WAY OR HIGHWAY" attitude to run the society for last 5 years and making a this sounds as a FRANK and GUTSfull...bull shit ...it seems you were hell bent on to prove what you were and what you can do

It is not that I don't respect the founder members.. I do..but as founder members they have some resposibilities towards the society... You can't give a birth to a baby and then abandon it... you are responsible for the baby...when I see that most of the founder members have abandoned the baby I really really feel sad.. and I start losing respect for them.. that is the reason I get angry with you guys...

Sorry my friend you had misconstrued the whole thing I did not ask for respect in first place ..it was only that you stop giving your FRANK and GUT's full opinion about others ...and do not rub a whole lot of people the wrong way..

Hamfest was the biggest event of our society.. how many founder members helped for it ? how many even attended it ?? do they have any shame.. ? I can understand they may be busy and can't attend for 3 days, but may be one day ? one hour, just to give their support ? if they were really really busy for all 3 days, than maybe before the event and help with preparations which went on for a full year ?

Need to really make some introspection on this...out of 25 founder members 1 member went silent key 2 were expelled as they some how got entagled into NLF "FRANK and HAVING GUTS" opinion ..10 from the remaining 21 were always active some other way or the other..why did they distnaced from you... yes it was shameful sham that you have made a mockery of the senior and activefounders members ..so why the remnaing will come...to the event to make a fool of themselves by your "FRANK and HAVING GUTS" opinion...

Maybe you don't like NLF, you hate his guts, but that should not make you resign and abandon your baby..

Unfortunately beside MARS you are my friend we have learend HAM RADIO together and share a beautiful experience of Hamming ...but it does not mean i share your "FRANK and HAVING GUTS" opinion and i do not hate your GUTS nor do i do prove mine... yes it was our baby but did u give us any room to undersatnd the baby ..or allowed us to have any say...so why are now feeling that we have done nothing ..you compelled us to do nothing for the baby with your "FRANK and HAVING GUTS" opinion style of functioning....

Well any way my friend whether you take a backseat or not .. I am definitely taking a break since I feel whether you on the MC or not makes no difference as the ghost will remain of your "FRANK and HAVING GUTS" opinion will haunt the new MC and make them work as per your style which I cannot..so it does not matter if there is a change or not ..definitely not

for me

Taking a break will also ensure less QRM which will make MARS work free from any UNFITNESS..and not allow NLF to give his "FRANK and HAVING GUTS" opinion about me and others.

Also there is lot I believe I can do without being on the committee..if the society feels I can do and I will always be available and for which even "FRANK and HAVING GUTS" opinion feel I should be on the committee..i will not

I will also now not be a part of JAM session I feel was doing with you ....and do some sincere hamming with my XYL VU2VAH ..enjoying and this wonderful and passionate hobby.

AND LASTLY HENCEFORTH I WILL NOT REPLY ANY OF YOUR sarcastically or "FRANK and HAVING GUTS" opinion emailed which i did for the last two mail as you unneccessarily pulled me into ....rather channelised my resources to mornng QTH where I will earn some of my lively hood..... which you do not.....

2513. THANK U FEO. JUST SCROLL DOWN

Yahoo group: m_a_r_s
Date: 2005-07-21 20:04:16 UTC
From: Micky Korde
Topic: 2513 Message: 2513

Dear FEO, NFL, & all concerned
This is Nothing Personal FEO & understand that it is just the ethics that u have addressed & thank u dear friend for your concern, your appeal & your advice, which as an elder u have expressed.
I am surprised to learn, what u have stated that u really do not know in depth of the ongoings within in the Society, then why this QM on the MARS group mail, my dear, ins ted a L.L or a cell call might have been the right way & much appreciated.

Any way thanks for the efforts, and many more thanks for making me change my mind to look in to the matter in a diffrent manner & to barge on to the group.

Any way this is for NLF now.

1) Rs.25,000/- was official Grant received for Hamfest. CLEAR

2) Rs.50,000/- removed from MARS A/c & transfered to Hamfest A/c on what basis.?

3) Was there a Managing Commitee Meeting conveyed with proper intimation to the M/C members, & if so was it ever resolved in the meeting,so held for the same,
&the minutes been written & signed by all members present, who so ever.?

4) Do U have the sole previlage for the amount to be spent of MARS with only
two signaturies.? (Sorry VU2 CBU)

5) What about the CORPUS FUND of MARS & as life Members & when the Right of Information law exisist can i have access to the books of a/c .

6) What about the A/c of amount of Rs. 30,000/- which U R having on hand since before the Hamfest.

7) Were U not responsible to complete them before the 31'st 0f March 2005.

8) What abt the RIGS that VU2 CDP (Icom ic 706 Mk. II G) & VU2 TAL, Dr. A.K. Mittal & VU2 CFO, Mr. Vijay Vaidya Which they have received in the RAFFEL DRAW
during the HAMFEST or was it just a SCAM as VU2 CDP has mentioned in his Mails. These A/C ought to be setteled befofe hand or forget u ,as in the capacity o the Ham Fest Treasurer I won't be having any face to show in any of the future HAM activities.

Considering the above FACTS , i would suggest that A SPECIAL EXTRA GENERAL
BODY MEETING BEEN CALLED TO SOLVE OUT THESE MATTERS , & EVEN ABOUT MY EXPULSION & THEN IT WOULD BE RIGHT TO RESOLVE THE MATTERS WHAT SO EVER. I TAKE THIS OPPOURNITY TO EXPRESS MY THOUGHTS & MY APOLOGIES, WHICH I HAVE ALREADY EXPRESSED IN THE PAST .MANY MORE TO BE REVILED TO U BY ME & Dr. MITTAL IF VU2 NLF SO DESIRES AS HE HAS STATED ABOUT BEING F RANK and HAVING GUTS
73's
de : MICKY - VU2 IZO

Friends,
It is very unfortunate that things have come to such a pass. Needless to say that the decision of the managaing committee was taken as per the byelaws and was in the interest of the society. If we plan to run the society on an emotional platform, believe me (and I have seen such events take place and the consequences) the society will finally close down. It is in the interest of the society that we stick to decisions taken by the MC. I have nothing personal against any member and I really do not know indepth of the goings ons but the fact that IZO went on to overrule the diktat of the MC is in itself sufficient reason to debar him. It could be IZO or NLF or anybody, but the decision should be the same.
IZO is a lovable person and I personally like him for his zest and enthusiasm. But anything in excess is bad. Reinviting him under such pressure will give very wrong signals to all, especially all the young entrants.
Already signs of revolt are there for all to see. Messing up with our website is just the begining.
It would be better to wind up the society rather than compromise on its working. You can see how far the society had come, with this discipline. We ran classes very professionally. Since the Hamfest limelight was being hogged by Nilesh, others felt left out and did not contribute. I think that was a very very poor display of attitude. Consider the amount of effort Nilesh put in. To me it was unbelievable. I was witness to it. Those few nights I attended the meetings, his concidence in face of all odds, was a revelation in itself. Those are the qualities of a leader. Only then can the society achieve its goals.
IZO is an emotional person. I appeal to this aspect of his, to withdraw. He is, as it is, doing well with TARA. He may score a point but at the end of it all, it will leave a bad taste in his mouth. He will earn more respect by backing off gracefully than reentering the society, because all the members will remember the incident.
I am relatively a new member and not so active too. But as an elder, I thought it fit to mention the above. Nothing personal IZO. It is just the ethics that I am addressing.

Subject: [mars_academy_2003] Good News for VU2IZO and his fans

Dear Members,

You are aware that Mr.Milind Korde (VU2IZO) aka Micky, was expelled by
the Managing Committee for following reasons :-

Unauthorized media and press releases were give by him to NDTV, Maharashtra Times and Indian Express. These T.V. interviews and press

releases were given on behalf of our society without the consent of any office bearers, mainly the secretary who is the official spokesperson of the society. These press releases were not only unauthorized but also misleading and wrong, this has seriously and badly affected the reputation of our society, especially our relations with all the government organizations.
Immediately after the first interview,he was specifically informed by our secretary Mr.Nilesh Rathod ? VU2NLF, not to give any further press releases/interviews. Inspite of this warning he continued giving these press releases and conducting media briefings.
Looking at these unauthorized actions by him and his past record of consistent alcoholic problem, (Consuming alcohol during society activities).
The following decision has been taken by the Managing Committee :
Milind Korde ?VU2IZO was expelled from the society and your membership cancelled with immediate effect.

A lot QRM was created that this was not done in a proper official way and therefore a "SHOW CAUSE NOTICE" was issued to him as required by our byelaws 32(b) to give the society an explanation as to why he has
carried out these unauthorized activities and why he should not be expelled from the society.

During the Hamfest it was decided by the Hamfest Managing Committee (where VU2IZO is the Treasurer) that we will start classes as we are likely to run some loss due to lack of funds, hence we will compensate this loss by running the classes and earning the money, we even conduct a awareness drive on the last day of the Hamfest to attract more students for our next batch, unfortunately VU2IZO not only cashed on our MARS goodwill, but also used all our course material, Books, CD, PowerPoint presentations to start his classes in TARA.
The meeting as per the "show cause notice" took place on 5th February 2005 at 7:00 PM, The M.C did not get any suitable explanation for his actions. During the meeting once again he was requested by the start classes in TARA as this would adversely affect the financial status of MARS , as this would further add to the reasons for expulsion. But he had already started the classes by then and there was no turning back. Subsequently the M.C took the final decision and expelled him from the society. I have taken these steps in the capacity of the Secretary of MARS and to protect the interest of MARS, I have no personal grudge with VU2IZO, which please note, In fact I lost a good friend (VU2IZO), because of my commitments to the my post as the secretary of MARS.
Many our members have condemned our MC decision and action, as in their opinion, is was a wrong thing to do. In fact few of our M.C members have also claimed that they have signed because of the pressure of VU2NLF.
To the extent that one of our members has hacked in to all our MARS E-Groups and removed my name (VU2NLF) from the owner and made "NLFKABAAP" owner of the group, after doing this, that person has included VU2IZO back into all our groups. This clearly shows that

some of our members think that they are above the law, and they do
that have any respect or recognition for the authority of the M.C.
MARS has officially expelled VU2IZO from the society, But Looking at
all this love of our members for VU2IZO, I don't think it is fair on
my part to keep them apart. Hence during the AGM (which will be very
soon hopefully). Let the JANTA (all the members present at the AGM)
decide by fair VOTE, if the members want him back, who am I to stop
them? VU2IZO may also file is nomination to run for elections (if he
wishes). His nomination will be valid once the votes are in his
favour to be accepted back in the society.
There is a Chinese saying BE CAREFUL FOR WHAT YOU ASK FOR, YOU MAY JUST GET IT?",
VU2IZO has also demanded a official apology letter from VU2NLF for
his
wrong actions. I am pleased to inform that I will be carrying by
apology letter with me during the AGM, and if the members vote in
his favour and he is accepted back in the society, I will accept the
decisions of our members and I will immediately offer my apology,
that is a promise?

All:

Do you still remember your Morse ? I'm especially talking to the 2003 batch folks.. I think I'll go transfer the "Music of the Morse" audio CD that we got during the camp to my MP3 player..

Could someone recommend any Morse learning and practicing software that runs on Windows XP ? I know I can google this out, but I'm a newbie, and seek recommendation and guidance from others around.

Thanks in advance,

Hi Sriram,
Good to know you still keen on code. Try "CW Player" from F6DQM.(ask Google for the URL).
Let me know how it works.

Friends,
It is very unfortunate that things have come to such a pass. Needless to say that the decision of the managaing committee was taken as per the byelaws and was in the interest of the society. If we plan to run the society on an emotional platform, believe me (and I have seen such events take place and the consequences) the society will finally close down. It is in the interest of the society that we stick to decisions taken by the MC. I have nothing personal against any member and I really do not know indepth of the goings ons but the fact that IZO went on to overrule the diktat of the MC is in itself sufficient reason to debar him. It could be IZO or NLF or anybody, but the decision should be the same.
IZO is a lovable person and I personally like him for his zest and enthusiasm. But anything in excess is bad. Reinviting him under such pressure will give very wrong signals to all, especially all the young entrants.
Already signs of revolt are there for all to see. Messing up with our website is just the begining.
It would be better to wind up the society rather than compromise on its working. You can see how far the society had come, with this discipline. We ran classes very professionally. Since the Hamfest limelight was being hogged by Nilesh, others felt left out and did not contribute. I think that was a very very poor display of attitude.
Consider the amount of effort Nilesh put in. To me it was unbelievable. I was witness to it. Those few nights I attended the meetings, his concidence in face of all odds, was a revelation in itself. Those are the qualities of a leader. Only then can the society achieve its goals.
IZO is an emotional person. I appeal to this aspect of his, to withdraw. He is, as it is, doing well with TARA. He may score a point but at the end of it all, it will leave a bad taste in his mouth. He will earn more respect by backing off gracefully than reentering the society, because all the members will remember the incident.
I am relatively a new member and not so active too. But as an elder, I thought it fit to mention the above. Nothing personal IZO. It is just the ethics that I am addressing.

Subject: [mars_academy_2003] Good News for VU2IZO and his fans

Dear Members,

You are aware that Mr.Milind Korde (VU2IZO) aka Micky, was expelled
by
the Managing Committee for following reasons :-

Unauthorized media and press releases were give by him to NDTV,
Maharashtra Times and Indian Express. These T.V. interviews and press
releases were given on behalf of our society without the consent of
any office bearers, mainly the secretary who is the official
spokesperson of the society. These press releases were not only
unauthorized but also misleading and wrong, this has seriously and
badly affected the reputation of our society, especially our
relations with all the government organizations.
Immediately after the first interview,he was specifically informed by
our secretary Mr.Nilesh Rathod ? VU2NLF, not to give any further
press releases/interviews. Inspite of this warning he continued giving
these press releases and conducting media briefings.
Looking at these unauthorized actions by him and his past record of
consistent alcoholic problem, (Consuming alcohol during society
activities).
The following decision has been taken by the Managing Committee :
Milind Korde ?VU2IZO was expelled from the society and your
membership cancelled with immediate effect.

A lot QRM was created that this was not done in a proper official way
and therefore a "SHOW CAUSE NOTICE" was issued to him as required by
our byelaws 32(b) to give the society an explanation as to why he
has
carried out these unauthorized activities and why he should not be
expelled from the society.

During the Hamfest it was decided by the Hamfest Managing Committee
(where VU2IZO is the Treasurer) that we will start classes as we are
likely to run some loss due to lack of funds, hence we will
compensate this loss by running the classes and earning the money, we even
conduct a awareness drive on the last day of the Hamfest to attract
more students for our next batch, unfortunately VU2IZO not only
cashed on our MARS goodwill, but also used all our course material, Books,
CD, PowerPoint presentations to start his classes in TARA.
The meeting as per the "show cause notice" took place on 5th February
2005 at 7:00 PM, The M.C did not get any suitable explanation for
his actions. During the meeting once again he was requested by the start
classes in TARA as this would adversely affect the financial status
of MARS , as this would further add to the reasons for expulsion. But he
had already started the classes by then and there was no turning
back. Subsequently the M.C took the final decision and expelled him from
the society. I have taken these steps in the capacity of the Secretary of MARS and to
protect the interest of MARS, I have no personal grudge with

VU2IZO, which please note, In fact I lost a good friend (VU2IZO), because of my commitments to the my post as the secretary of MARS. Many our members have condemned our MC decision and action, as in their opinion, is was a wrong thing to do. In fact few of our M.C members have also claimed that they have signed because of the pressure of VU2NLF.
To the extent that one of our members has hacked in to all our MARS E-Groups and removed my name (VU2NLF) from the owner and made "NLFKABAAP" owner of the group, after doing this, that person has included VU2IZO back into all our groups. This clearly shows that some of our members think that they are above the law, and they do that have any respect or recognition for the authority of the M.C.
MARS has officially expelled VU2IZO from the society, But Looking at all this love of our members for VU2IZO, I don't think it is fair on my part to keep them apart. Hence during the AGM (which will be very soon hopefully). Let the JANTA (all the members present at the AGM) decide by fair VOTE, if the members want him back, who am I to stop them? VU2IZO may also file is nomination to run for elections (if he wishes). His nomination will be valid once the votes are in his favour to be accepted back in the society.
There is a Chinese saying BE CAREFUL FOR WHAT YOU ASK FOR, YOU MAY JUST GET IT?", VU2IZO has also demanded a official apology letter from VU2NLF for his
wrong actions. I am pleased to inform that I will be carrying by apology letter with me during the AGM, and if the members vote in his favour and he is accepted back in the society, I will accept the decisions of our members and I will immediately offer my apology, that is a promise?
73
Nilesh ? VU2NLF
Secretary MARS.

Subject: [m_a_r_s] was it really easy for last 5 Yrs??????

Dear NLF"
I was loss to understand the way you have sarcastically apologised... or did you really meant an apology if so then be ready ...there will be a long list of people who you have rub the wrong way some way or the other...and this forum will be of your FRANK and HAVING GUTS" opinion and apologies which we are not interested....

I am very sorry to hear that you resigned because I declared that you are unfit to be the chairman. if any chairman resigns just because someone call him unfit, than I guess I must be right, he truely do not deserve to be the chairman.

Yes your are indeed right in your perspective..but unlike you I have a very high and dignified Ego... where if you are on the post..Chairman of the society and attending the meeting of one of its events and getting insulted in front of members for no reason ...it is not because someone called ..no one will dare to... but you called me for what ..kindly explain ..the reason for my "UNFITNESS"... is it because this CHAIRMAN was really working and did some real good work in short stint of 2 months or the work done was not according your BENCHMARKED style of working?????....

If my memory serves me right, I called you and specifically requested you "NOT TO RESIGN" after you decided to resign as VU2ICQ side to Singapore. I distinctly remember you telling me that you are very QRL with your work and there is a lot of QRM because of MARS in your personal life.
I even assured you that I will soon take up as the secretary and relieve your pressure. to the fact that we need a able Chairman to represent MARS during Hamfest 2004.

In fact in the farewell party we gave to VU2ICQ, I repeated told you not to resign.. when you were hell bent on resigning, I even requested VU2ZRS and VU2UGJ to take charge as Secretary and Chairman of the society... Please try to recollect...I am sure a lot of us were present in that party and they can confirm this...

There is no need to confirm I very well remember all what happened...and I did not resigned since ICQ QSYed which I have made very clear and the fact is you still wanted someone ..who will toe your line ,be a rubberstamp Chairman.... I do not understand when I appointed RIO as chairman why was he struck down..or you felt him also be UNFIT or you did not like his face ...inspite that you were supposed to relieve the pressure why senior core founder members and other eligible member did not wanted to become the chairman where such a prestigious event the chairman would have share the DIAS ....

yes when we formed MARS to get free from the shackles OF JNA undemocratic behaviour ..we never thought that MARS would run by a democratic dictator...who had vision of "MY WAY OR HIGHWAY" attitude to run the society for last 5 years and making a this sounds as a FRANK and GUTSfull...bull shit ...it seems you were hell bent on to prove what you were and what you can do

It is not that I don't respect the founder members.. I do..but as founder members they have some resposibilities towards the society... You can't give a birth to a baby and then abandon it... you are responsible for the baby...when I see that most of the founder members have abandoned the baby I really really feel sad.. and I start losing respect for them.. that is the reason I get angry with you guys...

Sorry my friend you had misconstrued the whole thing I did not ask for respect in first place ..it was only that you stop giving your FRANK and GUT's full opinion about others ...and do not rub a whole lot of people the wrong way..

Hamfest was the biggest event of our society.. how many founder members helped for it ? how many even attended it ?? do they have any shame.. ? I can understand they may be busy and can't attend for 3 days, but may be one day ? one hour, just to give their support ? if they were really really busy for all 3 days, than maybe before the event and help with preparations which went on for a full year ?

Need to really make some introspection on this...out of 25 founder members 1 member went silent key 2 were expelled as they some how got entagled into NLF "FRANK and HAVING GUTS" opinion ..10 from the remaining 21 were always active some other way or the other..why did they distnaced from you... yes it was shameful sham that you have made a mockery of the senior and activefounders members ..so why the remnaing will come...to the event to make a fool of themselves by your "FRANK and HAVING GUTS" opinion...

Maybe you don't like NLF, you hate his guts, but that should not make you resign and abandon your baby..

Unfortunately beside MARS you are my friend we have learend HAM RADIO together and share a beautiful experience of Hamming ...but it does not mean i share your "FRANK and HAVING GUTS" opinion and i do not hate your GUTS nor do i do prove mine... yes it was our baby but did u give us any room to undersatnd the baby ..or allowed us to have any say...so why are now feeling that we have done nothing ..you compelled us to do nothing for the baby with your "FRANK and HAVING GUTS" opinion style of functioning....

Well any way my friend whether you take a backseat or not .. I am definitely taking a break since I feel whether you on the MC or not makes no difference as the ghost will remain of your "FRANK and HAVING GUTS" opinion will haunt the new MC and make them work as per your style which I cannot..so it does not matter if there is a change or not ..definitely not for me

Taking a break will also ensure less QRM which will make MARS work free from any UNFITNESS..and not allow NLF to give his "FRANK and HAVING GUTS" opinion about me and others.

Also there is lot I believe I can do without being on the committee..if the society feels I can do and I will always be available and for which even "FRANK and HAVING GUTS" opinion feel I should be on the committee..i will not

I will also now not be a part of JAM session I feel was doing with you ....and do some sincere hamming with my XYL VU2VAH ..enjoying and this wonderful and passionate hobby.

AND LASTLY HENCEFORTH I WILL NOT REPLY ANY OF YOUR sarcastically or "FRANK and HAVING GUTS" opinion emailed which i did for the last two mail as you unneccessarily pulled me into ....rather channelised my resources to mornng QTH where I will earn some of my lively hood..... which you do not.....
